

# CCTV : Litigation & Recording

Application: Monitoring and recording of computer screens or other LCD screens using an ONVIF encoder. Combining PC images with IP camera images in an ONVIF VMS e.g Milestone or other ONVIF compliant VMS.

Description: CCTV systems using IP cameras use a central VMS (video management software) suite to record and display IP camera images. By adding an ANT-35000A encoder any HDMI DVI HD-SDI signal can be encoded to an RTSP ONVIF stream for recording and viewing just like an IP camera. The ANT-35000A has a passthrough function so the PC output can be connected to the 35000A and then the passthrough connected to the LCD PC Monitor avoiding splitters.
