

IPTV & STB

Application: Live streaming to IPTV set top boxes. Encoding of Set Top Box output for monitoring centrally and recording.

IPTV

Description: The ANT-35000A or ANT-2000 encoder can be used to stream a real time live MPEG-TS stream to an IPTV system like any DVB broadcast. Any HDMI source can be encoded and streamed in MPEG-TS or RTSP format. Alternatively the content being displayed by an IPTV box can be re encoded and streamed to a central 'Video Management Software' suite to record what each IPTV box is displaying.
