

Medical

Application: Remote training rooms , distance consultation , recording for litigation evidence , two way audio + video

Description: MRI CT scanner , Endoscopy machines DVI output is connected to an ANT-35000A encoder. The encoder streams the images seen by the local surgeon on the PC Monitor screen and is displayed remotely and recorded. An Ip camera is used to stream images from within the room and these are recorded and displayed in exactly the same way as the encoder streamed images. Streamed images can be decoded on a computer or laptop or using a hardware decoder (ANT-36000) . The 360000 can be used to control a PTZ camera if required
