

UAV & Robotic

Application: Cameras (HD + SD) stream simultaneously from a UAV Drone via ethernet/RF link to a ground station for decoding and display.

Description: UAV modules (ANT-1771/1772/1773) encode one or more video inputs in HD and SD formats. HD-SDI and Composite video or HDMI are supported. These video inputs are simultaneously encoded and streamed via ethernet over RF to the ground for decoding and display. A hardware decoder can be used or software decoder using VLC player or our own Low Latency decoder software (Neptune player)
