

CommScope® M2000 Patch Panel Updated Design

CommScope’s M2000 patch panel products will be updated to the same structure as the current SYSTIMAX 360 and Uniprise® panels, offering the same footprint and design for flat and angled options.

The current panel designs for the M2000 will be officially discontinued December 1, 2015.

At this time, the target availability date for the new design is September 1, 2015. Another product bulletin will be released in August with any updates to this general availability date.

No other changes to the panels will occur at this time.
