

Copper Patch Panel Label Changes

Effective immediately Commscope will change the labeling for many of our patch panels. Currently, the 360 1100 Evolve and 360 PatchMax Panels are shipped with adhesive backed labels.

The new labeling that ships with the panels consists of a label holder, label strips, and label covers. Each 6-Port Distribution Module has a label holder, label strips for 6 Ports, and a label cover to protect the label strips. The label holder attaches to the distribution module with a clip that engages a slot in the module. The label holder ships attached to the panel, but can be easily removed by sliding the holder slightly to the right and removing from the slot.

The label holder can be equipped with color coded icons for each port. The icons can be added to identify port functions by color. The icons are the M61XX (XX denotes color) and are ordered separately. These are the same icons used for M-series Outlets.

The same label holder design will be shipped with the panels listed below. The difference is the label holder color. The SYSTIMAX® 360 Panel label holders are grey and the Uniprise UNP U 610 and SYSTIMAX 1100PS Panel label holders are black.

Printable label sheets are available in US LTR and A4 sizes. These label sheets are compatible with the panels listed below.

Ordering Information:

Material ID	Description
760186502	360 and UNP Label Sheet A4

Supporting Documents:

Excel format labeling templates for these label sheets are available [HERE](#) (template identified by Label Sheet MID/Description).

This label change will provide for consistent and common labeling across Commscope Patch Panels. Plus the same label sheets and label templates are used for these panels.
