

# Patch Panel Termination Manager Update (MID 760199760)

## EMEA communication

Effective July 31, 2015, CommScope's termination manager will be upgraded from a "2 hole" design to a "4 hole" design. All patch panels and distribution modules will be shipped with the new version.

The new version creates a more consistent installation process separating the 4 pairs into each of their own pass through holes. No changes to installation of the panel or termination manager will occur. Installation instructions will show the new design.

While all kits will continue to come with the appropriate quantity of termination managers for the product, the orderable bag of 28 will have a new MID of 760199760.

The following panels and distribution modules will start shipping with the new termination manager effective July 31, 2015. No other changes to the panels and modules will occur.
