

PATCHMAX® PowerSum Patch Panel

Design upgrade for the PATCHMAX PowerSum patch panels

Global Communication

Effective immediately, CommScope will change the PATCHMAX Power Sum patch panel to the same structure as the PATCHMAX GS3 patch panels.

The new PowerSum panels will have the same footprint as the GS3 panels, 2U-24 port and 3U-48 port. The PowerSum transmission performance is the same as the current PowerSum version.

The new PATCHMAX PowerSum panels maintain the same unique modularity and patch cord management system built into the panel. The distribution modules can be rotated forward for front access to the insulation displacement connector (IDC) for front cable termination. This new PowerSum design includes termination managers that provide for easier, faster, and more reliable cable terminations.
