# Eaton power infrastructure solutions & products

**E·A·T·N**

*Powering Business Worldwide*

# Energizing a world
## that demands more.

## Discover today's Eaton.

### Powering business worldwide

As a global power management company, we help customers worldwide manage the power needed for buildings, aircraft, trucks, cars, machinery and businesses.

Eaton's innovative technologies help customers manage electrical, hydraulic and mechanical power more reliably, efficiently, safely and sustainably.

**F·T·N**

*Powering Business Worldwide*

## We deliver:

- **Electrical solutions** that use less energy, improve power reliability and make the places we live and work safer and more comfortable

- **Hydraulic and electrical solutions** that enable machines to deliver more productivity without wasting power

- **Aerospace solutions** that make aircraft lighter, safer and less costly to operate, and help airports operate more efficiently

- **Vehicle drivetrain and powertrain solutions** that deliver more power to cars, trucks and buses, while reducing fuel consumption and emissions

We provide integrated solutions that help make energy, in all its forms, more practical and accessible.

With 2012 sales of $21.8 billion on a pro forma basis, Eaton has approximately 102,000 employees around the world and sells products in more than 175 countries.

## Eaton's electrical business

**Eaton is a global leader with expertise in:**

- Power distribution and circuit protection
- Backup power protection
- Solutions for harsh and hazardous environments
- Lighting and security
- Structural solutions and wiring devices
- Control and automation
- Engineering services

Eaton is positioned through its global solutions to answer today's most critical electrical power management challenges. With 100 years of electrical experience behind us, we're energized by the challenge of powering up a world that demands twice as much energy as today. We're anticipating needs, engineering products and creating solutions to energize our markets today and in the future.

We are dedicated to ensuring that reliable, efficient and safe power is available when it's needed most.

# Intelligent Power Pod

## Your Business Live 365

Build your own integrated power management system for your converged infrastructure solution

Eaton´s Intelligent Power Pod is an integrated power management system for modern IT architectures including converged infrastructure solutions. It does not only reliably house and protect your IT application, but also ensures business continuity and data integrity through full integration with hypervisors and automation of the virtual servers' migration to the cloud or backup site in case of power outage. Your IT application is protected, managed and works non-stop. Your Business Live 365.

# Eaton's heritage in industry -leading UPS design and production

For more than 50 years, Eaton has been safeguarding the critical systems of businesses across the globe. Whether protecting a single desktop or a large data centre, Eaton solutions provide clean, uninterrupted power to keep mission-critical applications working. We offer a comprehensive range of environmentally sensitive, efficient, reliable UPSs, surge protective devices, power distribution units (PDUs), remote monitoring solutions, meters, software, connectivity solutions, enclosures, airflow management and professional services. We work with IT and facilities managers to effectively manage power in virtually every business segment, including data centres, retail outlets, healthcare organisations, governmental agencies, manufacturing firms, broadcasting companies, financial institutions, and a wide variety of other areas. Our solutions provide the power to make a difference, helping you achieve your business goals while maintaining an environmentally sustainable enterprise.

# Why use UPS?

An uninterruptable power supply (UPS) protects IT equipment and other electrical loads from problems that can affect the public electricity supply. It performs the following three basic functions:

**1.** Prevents hardware damage typically caused by surges and spikes. Many UPS models continually condition incoming power as well.

**2.** Prevents data loss and corruption. Without a UPS, data stored on devices that are subjected to a hard system shutdown may become corrupted or even lost completely. In conjunction with power management software, a UPS can facilitate a graceful system shutdown.

**3.** Provides availability for networks and other applications while preventing downtime. UPSs can also be paired with generators in order to give the generators sufficient time to power up in the event of a power cut.

Eaton UPSs address all of the nine common power problems below:
**1. Power failure**
typically caused by lightning strike or fault with the power company's equipment. Without a UPS, this will cause a hard shutdown, putting data at risk.

**2. Power sag**
Short-term voltage reduction, often caused by start-up of nearby large loads. Power sags can cause equipment crashes and hardware damage.

**3. Power surge**
Short-term high voltage, usually caused by lightning strike nearby. Spikes almost always lead to data loss and/or hardware damage.

**4. Undervoltage**
Reduced supply voltage lasting from minutes to days. Typically occurs when supply network is overloaded. Can lead to computers behaving unpredictably.

**5. Overvoltage**
Increased supply voltage lasting from minutes to days. Often triggered by rapid reductions in power demands, overvoltage can damage hardware.

**6. Electrical noise**
"Interference", typically from radio transmitters, welding equipment etc. Noise can cause hard-to-find intermittent problems.

**7. Frequency variation**
Changes in supply frequency, usually only found on supplies from generators.

**8. Switching transient**
Instantaneous undervoltage, typically lasting a few nanoseconds.
**9. Harmonic distortion**
Disortion of the normal smooth supply waveform. Can be caused by variable spreed drivers and even photocopiers. Can cause communication errors, overheating and hardware damage.

# UPS topologies for different needs

Three common UPS topologies described below provide varying degrees of protection for your equipment.
**Passive standby topology (off-line)** is the most frequently used UPS topology for protecting PCs against power failure, power sag and power surge. In normal mode, the UPS supplies power to the application directly from the mains, filtered but without active conversion. The battery is charged from the mains. In the event of a power cut or fluctuation, the UPS delivers stable power from the battery. The advantages of this topology are low cost and adequacy for office environments. Passive standby topology is not suitable if the power supply is of low quality (industrial sites) or subject to frequent disruptions.
**Line interactive topology** is used for protecting enterprise networks and IT applications against power failure, power sag, power surge, undervoltage and overvoltage. In normal mode, the device is controlled by a microprocessor that monitors the quality of the supply and reacts to fluctuations. A voltage compensation circuit is enabled to boost or reduce the supply voltage to compensate for the fluctuations. The main advantage of this topology is that it enables compensation of under and overvoltage without using the batteries.
**Double conversion topology (on-line)** is a basis for UPSs designed for continuous power protection of critical equipment against all nine power problems: power failure, power sag, power surge, undervoltage, overvoltage, switching transient, line noise, frequency variation and harmonic distortion. It ensures a consistent quality of power supply regardless of disturbances in the incoming mains. The output voltage is entirely regenerated by a sequence of AC to DC conversion followed by DC to AC conversion in order to create power supply without any electrical interference. Double conversion UPSs can be used with any type of equipment as there are no transients when changing over to battery power.

# Eaton Protection Box

*Eaton Protection Box 8*

*Eaton Protection Box 5*

*Eaton Protection Box 1*

**Advanced protection for:**

• Computers, peripherals and multimedia
• TV, Video and Hi-Fi equipment: Home cinema, DVD writers, digital decoders, etc.
• Broadband modems (Internet and TV)
• IP telephony
• Household goods, etc.

## Surge protection

The Eaton Protection Box multi-way block with high performance surge protection is a simple solution for protecting delicate equipment.

### Effective surge protection

The Protection Box is designed to filter the power supply for delicate equipment to protect it against surges, interference and the indirect effects of lightning.

The high performance of the Protection Box is based on an advanced design with surge protection in compliance with IEC 61643-1.

### Complete protection

The Protection Box range has models with 1, 5 or 8 sockets. Some models also provide protection for telephone connections that can carry surges to the equipment.

• Tel@ models: with telephone/broadband Internet access protection
• Tel@ + TV models: with telephone/broadband Internet access protection + Audio/Video protection module (surge protection for television and FM radio with TV and F-Type connectors)

### Practical and economical: replaceable surge protection module

(Protection Box 5 Tel@, 5 Tel@ + TV and 8 Tel@ + TV)

The surge protective components for these models are grouped into a pluggable module for:

• Easy replacement if the surge protective devices are destroyed by a major surge (no need to disconnect the equipment and the pluggable unit is an Eaton standard replacement part)
• Can be updated (adding functions, changing connectors, etc.)

### Warranty for connected equipment

Eaton offers free warranty for the equipment connected (applicable for EU countries and Norway only). This insurance is included in the purchase price of the Protection Box and covers up to 50 000 € for an 8 socket model to cover damage caused by a failure of the surge protection.

### And lots of features to simplify life

• Power ON and active protection indicators
• PowerLine Communications compatibility (Protection Box 5/8) for connecting PLC adapters
• Cable ties and cable markers supplied (5 and 8 socket models)
• Sockets arranged to allow blocks to be plugged side by side

# Eaton Protection Station

## 500/650/800 VA

*Eaton Protection Station 800*

*Multi-position*

**Advanced protection for:**
- Home computing
- Digital leisure equipment

### Combined UPS/surge protection/ multiple socket device

Innovative solutions offering total protection for home computers and digital leisure devices.

### Connect all your equipment and protect them against power failures and voltage fluctuations…

Eaton Protection Station can do this, offering in a single device:
- Up to 8 standard outlets
- A high performance surge suppressor
- A UPS with 20 to 30 minutes battery back-up for a typical PC

### The first UPS in this class with energy saving features

Eaton Protection Station boasts an efficient electrical design with **EcoControl function** that **automatically disables peripherals** when the master device (Computer, HD TV, Home network storage, etc...) is turned off. This will help you **save up to 30% energy** compared to previous generation UPSs.

### One model suitable for each application

3 versions (500 VA/250 W, 650 VA/400 W or 800 VA/500 W backup power), to protect an internet PC, a multimedia computer with peripherals or a hardcore gamer configuration. Thanks to its multi-position format Eaton Protection Station can fit anywhere.

### Guarantees total peace of mind

- Surge suppressor compatible with IEC 61 643-1 standard (+ status indicator)
- USB port and power management software as standard (650 & 800 models)
- Data line protection to ensure that the internet line (including xDSL) is protected against surges
- Unlimited warranty for the connected computer equipment (EU countries and Norway)
- Periodic test and battery replacement indicator

An Eaton Green Solution

# Eaton 3S UPS

## 550 – 700 VA

**Ideal for protecting:**

- Computers and peripherals
- Broadband modems (internet and TV)
- IP telephony equipment
- POS equipment

### Power protection for office and home computer equipment

#### Protection against power problems

- The Eaton 3S UPS helps to protect your computer equipment in case of everyday events such as lightning strikes, storms, over-demand on the utility grid, accidents, and natural disasters knocking out power without warning.
- In the event of a total blackout, the unit provides sufficient battery backup time to last through most power outages.
- The 3S also protects telephone, broadband and Ethernet line from "back door" power surges.
- The shutdown software makes it possible to automatically save your work and shut down your application without losing any data. Once the power is restored, you can continue working exactly where you left off.

#### Easy integration and installation

- Attractive design and glossy finish make the 3S a perfect fit for the modern office environment.
- The 3S comes with either 6 Schuko (DIN) or 6 French (FR) outlets for easy connection of typical computer configurations with peripherals (IEC model also available with 8 outlets).
- The 3S features a HID-compliant USB port (cable supplied), for automatic integration with common operating systems (Windows/Mac OS/Linux).
- Compact unit fits on or under your desk or can be mounted on a wall.
- Easy-to-replace battery helps to extend UPS service life.

# Eaton Ellipse ECO

## 500/650/800/1200/1600 VA

*Eaton Ellipse ECO range*

*Eaton Ellipse ECO easy integration*

### Energy-efficient power protection for business computers

- With an efficient electrical design and the EcoControl function (USB models), which automatically disables peripherals when the master device is turned off, the Eaton Ellipse ECO helps you make energy savings of up to 25% compared to previous-generation UPSs.
- As well as providing a power supply backed up by a battery to keep equipment operating during a power failure, the Ellipse ECO also provides effective protection against damaging surges.
- The Ellipse ECO includes a high performance surge-protection device that complies with IEC 61643-1; this device also protects data connections such as Ethernet, internet and telephone lines.

### Easy integration and installation

- The Ellipse ECO comes with either four (500/650/800 models) or eight outlets (1200/1600 models) with Schuko (DIN) or French (FR) format for easy connection to typical computer configurations with peripherals. IEC models are also available.
- The Ellipse ECO's extra-flat design makes it easy to install in any office environment: installation options include vertical box format, below the desk, horizontally under a monitor, 19″ rack-mounted (optional 2U kit) and wall-mounted (optional kit).
- The USB models are designed to be compatible with a wide variety of different computer models. Eaton power management software is delivered as standard (CD and USB cable supplied) and is compatible with all major operating systems (Windows 7, Vista, XP, Linux and Mac OS).

### Complete peace of mind

- Unlimited warranty for the connected computer equipment (EU countries and Norway)
- Periodic battery self-test ensures early detection of a battery that needs to be replaced.
- Easy-to-replace battery helps to extend UPS service life.
- Push-button circuit breaker enables easy recovery from an overload or short circuit.

# Eaton 5S UPS

## 550/700/1000/1500 VA

*Eaton 5S UPS product range*

*Eaton 5S versatility*

**Ideal for protecting:**

- Workstations
- Business Telephony
- Network devices
- Point-of-sale equipment

## Affordable power protection for workstations

### Performance

- The Eaton 5S UPS provides effective power protection, even in disturbed electrical environments. Voltage fluctuations are automatically corrected using an AVR device (booster/fader), without needing the batteries.
- The 5S not only provides a supply with battery backup to keep equipment operating during power cuts, but also provides effective protection against damaging surges.

### Reliability

- The 5S protects networked equipment from "back door" power surges coming through Ethernet, internet or telephone lines.
- The 5S's periodic automatic battery testing ensures early detection if a battery needs to be replaced.
- The easy-to-replace battery helps to extend the UPS service life.

### Versatility

- The 5S can be installed vertically over or under a desk, or horizontally under a screen. Its compact, slimline form factor even allows it to be easily integrated into environments with space constraints.
- The 5S features an HID-compliant USB port, for automatic integration with common operating systems (Windows/Mac OS/Linux). The 5S is also compatible with Eaton UPS Companion power management software.
- All models come bundled with a USB cable and two IEC-IEC load cables.

# Eaton Ellipse PRO UPS

## 650/850/1200/1600 VA

*Ellipse Pro range*

*LCD screen*

**Advanced protection for:**

- Workstations
- Network devices
- Peripherals

### Energy-saving power protection for workstations

- The LCD screen on the Eaton Ellipse PRO UPS provides clear information on its status and measurements. It also allows easy configuration of UPS settings.
- The EcoControl function, which automatically disables peripherals when the master device is turned off, can cut energy consumption by as much as 20%.
- Automatic Voltage Regulation (AVR) instantly corrects voltage fluctuations, meaning you can continue working through brownouts and overvoltages without using the batteries.
- The Ellipse PRO includes a high performance surge-protection device that complies with IEC 61643-1. This device also protects data connections such as Ethernet, internet and telephone lines.

### Easy integration and installation

- The Ellipse PRO comes with either four (650/850 models) or eight (1200/1600 models) Schuko (DIN) or French (FR) sockets for easy connection to most common computer configurations with peripherals. IEC models are also available.
- The Ellipse PRO's extra-flat design makes it easy to install in any office environment: installation options include vertical box format, below the desk, horizontally under a monitor, 19″ rack-mounted (optional 2U kit) and wall-mounted (optional kit).
- The Ellipse PRO is equipped with a USB port and comes complete with a USB cable and Eaton UPS Companion software that enables safe system shutdown, energy usage metering and easy configuration of UPS settings.

### Complete peace of mind

- Three-year warranty including batteries.
- Unlimited warranty for connected computer equipment (EU countries and Norway only).
- Battery tests itself automatically at regular intervals, ensuring early detection when it's time for replacement.
- Easy-to-replace battery helps to extend UPS service life.

# Eaton 5SC UPS
## 500/750/1000/1500 VA

*5SC Range*

*LCD interface*

**Ideal for protecting:**

- Tower Servers
- NAS, Network equipment
- ATMs, Ticket machines, Kiosks

**Affordable and reliable protection for small business servers**

### Easily manageable UPS

- The new LCD interface provides clear status of the UPS key parameters such as input and output voltage, load and battery level, and estimated runtime. Configuration capabilities are also offered for output voltage, audible alarm and sensitivity.
- The 5SC offers USB and serial connectivity. USB port is HID compliant for automatic integration into Windows, Mac OS and Linux.
- Eaton Intelligent Power Protector ® (IPP) software delivered as standard, can be used as point to point power management (USB/Serial) or Network based using IPP as a proxy.

### Reliable power protection

- Pure sinewave output: When operating in battery mode the 5SC provides a high quality output signal for any sensitive equipment connected, such as active PFC (power factor corrected) servers.
- Buck and Boost operation corrects a wide range of input voltage variations through continuous regulation, without the use of batteries, and ensures consistent input voltage to the loads protected.
- Stronger, longer battery life: Eaton ABM® battery management technology uses an innovative three-stage charging system that extends battery life by up to 50%.

### Flexible integration

- Small size for easy integration even with space constraints (kiosks, cash machines, ticket machines etc.) and up to eight outlets for better flexibility!
- Adjustable input waveform sensitivity to adapt the UPS to specific environment (like Genset).
- Easy battery replacement from front panel to extend UPS life.

# Eaton 5P UPS
## 650/850/1150/1550 VA

*Available in tower and rack 1U format*

*Intuitive LCD*

**Ideal for protecting:**

- Servers
- Networking
- Storage devices

**Eaton 5P is an energy efficient line-interactive UPS with advanced LCD and energy metering features.**

### Manageability

- The new graphical LCD display provides clear information on the UPS's status and measurements on a single screen (in seven languages). Enhanced configuration capabilities are also available with easy-to-use navigation keys.
- The 5P can meter energy consumption providing kWh values through the LCD and Eaton's power management software.
- Load segment control enables prioritised shutdowns of non-essential equipment during outages in order to maximise battery runtime for critical devices. Load segment control can also be used to remotely reboot locked-up network equipment or to manage scheduled shutdowns and sequential start-ups.
- The 5P offers Serial and USB connectivity, plus an extra slot for an optional communication card (including SNMP/Web card or relay contact card). Eaton's Intelligent Power® Software Suite compatible with all major OS including virtualisation software such as VMware and Hyper-V is included with each UPS.

### Performance and efficiency

- Energy efficient UPS: With an optimised electrical design, the 5P provides up to 98% efficiency, reducing cooling and utility costs.
- Pure sinewave output: When operating in battery mode the 5P provides a high quality output signal for any sensitive equipment connected, such as active PFC (power factor corrected) servers.
- Adjustable tolerance and sensitivity: Users can maximise useful battery life by widening the input voltage window or adjustable input waveform sensitivity (via the LCD or software) to adapt the UPS to a specific environment (like Genset).

### Availability and Flexibility

- The 5P is available in tower or Rack 1U format, providing unmatched energy density with up to 1.1 kW in only 1U.
- Stronger, longer battery life: Eaton ABM® battery management technology uses an innovative three-stage charging technique that extends batteries by up to 50%.
- Batteries can be hot-swapped without ever having to shut down connected equipment. With an optional, hot-swap maintenance bypass module, you can even replace the entire UPS.

# Eaton 5PX UPS

## 1500/2200/3000 VA

*Rack/Tower versatile*

*Intuitive LCD display for ease of configuration and management*

**Advanced protection for:**

- Servers
- Switches
- Routers
- Storage devices

**Exceptional efficiency, manageability and energy metering capabilities for IT managers**

### Manageability

- The new graphical LCD display provides clear information on the UPS's status and measurements on a single screen (in seven languages). Enhanced configuration capabilities are also available with easy-to-use navigation keys.
- For the first time in the industry the 5PX can meter energy consumption right down to the managed outlet groups. kWh values can be monitored using the LCD or Eaton's Intelligent Power® Software Suite.
- Load segment control enables prioritised shutdowns of nonessential equipment to maximise battery runtime for critical devices. Load segment control can also be used to remotely reboot locked-up network equipment or to manage scheduled shutdowns and sequential start-ups.
- The 5PX offers Serial and USB connectivity, plus an extra slot for an optional communication card (including SNMP/Web card or relay contact card). Eaton's Intelligent Power® Software Suite compatible with all major OS including virtualization software such as VMware and Hyper-V is included with each UPS.

### Performance and Efficiency

- With an optimised electrical design, the 5PX can provide up to 99% efficiency, reducing cooling and utility costs.
- With a power factor of 0.9, the 5PX delivers more real output power. It powers more servers than other UPSs with equivalent VA ratings and lower power factors. The 5PX is compatible with all modern IT equipment.
- When operating in battery mode the 5PX provides a high quality output signal for any sensitive equipment connected, such as active PFC (power factor corrected) servers.

### Availability and Flexibility

- The 5PX is available in a rack/tower convertible version-pedestal and rail kits are included with all models at no extra charge.
- Stronger, longer battery life: Eaton ABM® battery management technology uses an innovative three-stage charging technique that only recharges the battery when necessary, so the battery experiences less corrosion and service life is prolonged by up to 50%.
- Batteries can be hot-swapped without ever having to shut down connected equipment. With an optional, hot-swap maintenance bypass module, you can even replace the entire UPS.
- There is also the possibility to add more runtime with up to four external hot-swappable battery modules, able to run systems for hours if necessary. The additional battery modules are automatically recognised by the UPS.

# Eaton 9130 UPS
## 700/1000/1500/2000/3000/5000/6000 VA

*Multilingual LCD*

**Advanced power protection for:**

- IT and networking environments
- Servers, networking gear
- Telecommunications, VoIP, security systems
- Medical systems
- Diagnostics and medical screening
- Patient record archives
- Manufacturing systems
- Chip fabrication
- Pharmaceutical production
- Chemical processing

## Double-conversion UPS

### Highest power performance

- Double-conversion topology. The 9130 constantly monitors power conditions and regulates voltage and frequency. Even when presented with the most severe power problems, UPS's output remains within 3% of nominal voltage.
- More real power. High 0.9 output power factor enables the 9130 to provide its full power capability to modern IT equipment.
- Highest efficiency to reduce utility and cooling spending. The 9130 can provide up to 95% efficiency in online double-conversion mode and up to 98% in high-efficiency mode.

### Unmatched reliability

- The internal bypass allows service continuity in case of internal fault, a maintenance bypass is also available (as option) for easy replacement of the UPS without powering down critical systems.
- Stronger, longer battery life. Eaton ABM® battery management technology uses an innovative three-stage charging technique, that only recharges the battery when necessary, so the battery experiences less corrosion and service life is prolonged by up to 50%.
- Batteries can be hot-swapped without ever having to shut down connected equipment.
- Possibility to add more runtime at any time with up to four external hot-swappable battery modules to run systems for hours if necessary.
- Enables prolonged runtime of essential equipment during power outages by allowing for orderly, remote shutdown of non-critical systems and processes thanks to a capability to control load segments (available up to 3 kVA).

### Outstanding versatility

- One platform, two factors, dozens of choices. Up to 3000 VA of UPS power is packed into only 2U of rack space. The tower option is about the size of a modern, compact PC.
- Enhanced configuration capability through easily navigated multilingual graphical display.
- Remote monitoring. The 9130 comes complete with the Eaton Intelligent Power® Software CD including SNMP-compatible power management software providing control and visibility over all your UPS systems.
- Connectivity options are available for almost any network environment.

# Eaton 9130 UPS

1. Multilingual graphical LCD display
2. Panel for replacing batteries
3. 1 USB port + 1 serial port
4. 1 Relay Output + 1 EPO connector
5. EBM battery unit connector
6. Load segments
7. Communication card slot
## TECHNICAL SPECIFICATIONS

### General

| | |
|---|---|
| User interface | Graphical LCD with blue backlight and text in English, French, German, Russian and Spanish |
| LEDs | Four status-indicating LEDs |
| Topology | True online, double-conversion |
| Diagnostics | Full system self-test |
| UPS bypass | Automatic bypass |
| Rail kit | Included with all rackmount units |

### Electrical Input

| | |
|---|---|
| Nominal voltage | 220–240 V |
| Voltage range | up to 120–276 VAC (depending on load level) |
| Frequency range | 40–70 Hz (50/60 Hz) |

### Electrical Output

| | |
|---|---|
| Power factor | 0.9 |
| Voltage | ±3% of nominal regulation (on utility and battery) |
| Frequency regulation | ±3 Hz online |
| Load crest factor | 3 to 1 |

### Communications

| | |
|---|---|
| Ports | RS-232 and USB HID port as standard |
| Relay output | Common alarm standard |
| Optional communication cards (BD/MS Slot) | SNMP/Web card for monitoring in SNMP-based networks. Relay card for remote shutdown of IBM AS/400 systems. MODBUS for integration to industrial environment. |

### Environmental

| | |
|---|---|
| Safety and EMC markings | IEC/EN 62040-1, IEC/EN 62040-2, CE marking |
| Audible noise | <50 dB |
| Ambient operating | 0°C to +40°C |
| Storage temperature | -20°C to +40°C with batteries and -25°C to +55°C without batteries |
| Relative humidity | 5–90% non-condensing |

# Eaton EX
## 700/1000/1500/2200/3000 VA

*Eaton EX 1500*

*Eaton EX Rack/Tower versatility*

**Ideal protection for:**

- Servers, data storage and network equipment
- Telephony- VoIP
- Medical equipment- Industrial processes

### Double-conversion (on-line)

### Maximum availability

- **Topology:** double-conversion on-line UPS with automatic by-pass and power factor correction
- **Powershare:** the Eaton EX output sockets are individually controlled to provide load-shedding to maximise the backup time and provide remote reboot and sequential start-up as standard
- **Continuous power supply:** Hot-swappable batteries. The HotSwap MBP (Maintenance By-Pass) module allows the UPS to be replaced without interrupting the power supply
- **Long backup times:** 1 to 4 EXB battery units can be added to the Eaton EX. The Eaton EX 3000XL has a built-in super charger for extra long backup times

### Minimum total cost of ownership

- **Easy operation:** the LCD gives you access to a wide range of measurements and set-up menus
- **Remote supervision:** the Eaton Intelligent Power® Software offers a wide range of communication option including: SNMP and HTML, ModBus/JBus and relay outputs

### Total flexibility

Eaton EX has unmatched Flexibility.

- **Format:** EX 700 to 1500 are available in tower format or RT2U convertible rack/tower format (compatible with short-depth rack). EX 2200 & 3000 are available in RT2U format (optimised for rack mounting) or RT3U (for tower or short-depth racks)
- **Connections:** with FlexPDU and HotSwap MBP, the RT2U and RT3U models can be connected by sockets or terminal blocks. They can be installed as required, on the side or on top of-the unit
- **Compatible with high power factor loads:** Eaton EX is rated for 0.9 power factor (700 VA/630 W, 1000 VA/900 W, 1500 VA/1350 W, 2200 VA/1980 W and 3000 VA/2700 W)
- **Communication:** the EX includes both serial and USB ports, plus remote On/Off connector and an extra slot for optional communication cards. The UPS comes with a complete Eaton Intelligent Power® Software.

# Eaton EX UPS

1 LCD Multilingual display
   - 6 languages,
   - displays measurements,
   - displays alarms,
   - access to control and set-up menus.

2 Panel for batteries replacement
   (Hot-swappable)

*Eaton EX 3000*

3 1 USB port + 1 serial port + remote ON/OFF and emergency stop inputs.

4 EXB battery unit connector.

5 EXB units recognised automatically.

6 8 IEC 10 A sockets, including 4 Powershare programmable sockets and 1 IEC 16 A socket.

7 Communication card slot.

8 Mountings for HotSwap MBP and FlexPDU.

# Eaton 9SX UPS
## 5/6/8/11 kVA

*9SX 11 kVA*

*9SX is an Energy Star® qualified UPS*

*9SX LCD tilts 45° for ease-of-viewing*

**Advanced protection for:**
- Infrastucture, Industrial and Medical
- IT, Networking, Storage and Telecom

## High performance Online double-conversion UPS

### Performance and Efficiency
- Double-conversion topology. The Eaton 9SX constantly monitors power conditions and regulates voltage and frequency.
- With up to 95% efficiency in online double-conversion mode the 9SX provides the highest efficiency level in its class to reduce energy & cooling costs.
- With a 0.9 power factor the 9SX delivers 28% more power than UPS in its class. It powers more servers than other UPSs with equivalent VA ratings and lower power factors.

### Availability and Flexibility
- The internal bypass allows service continuity in case of internal fault. Batteries are hot-swappable from the front panel without powering down critical systems.
- With its rack/tower versatile form factor the 9SX can be installed in any environment (rack kit provided as standard on RT versions).
- Stronger, longer battery life: Eaton ABM® battery management technology uses an innovative three-stage charging technique that extends battery life by up to 50%.
- More runtime can be added with up to 12 external hot-swappable battery modules, able to run systems for hours if necessary. The additional battery modules are automatically recognized by the UPS.

### Manageability
- The new graphical LCD provides clear information on the UPS's status and measurements on a single screen (in seven languages). LCD display position can be adjusted to offer the best viewable angle for tower and rack usage.
- The 9SX can meter energy consumption. kWh values can be monitored using the LCD or Eaton's Intelligent Power® Software Suite.
- Load segment control enables prioritised shutdowns of nonessential equipment to maximise battery runtime for critical devices. It can also be used to remotely reboot locked-up equipment or to manage scheduled shutdowns and sequential start-ups.
- The 9SX offers Serial, USB and relay (4 dry contacts) connectivity, plus an extra slot for an optional card (Modbus, Network or Relay). 9SX also provides Remote Power off function. Eaton's Intelligent Power® Software is included with each UPS.

# Eaton 9SX UPS

1 Remote Off/On and Remote Power Off connectors

2 Slot for Network-MS, ModBus-MS or Relay-MS cards

3 External battery module (EBM) connector with automatic detection (RJ11)

*Eaton 9SX 11 kVA*

# Eaton 9PX UPS
## 5/6/8/11 kVA

*Rack/Tower versatile*

*9PX 1:1 is an Energy Star® qualified UPS*

*9PX 11 kVA with maintenance bypass*

**Advanced protection for:**
- Small and Medium Datacentre
- IT, Networking, Storage and Telecom
- Infrastucture, Industrial and Medical

Watch 9PX's video

## Energy efficient power protection

### Performance and Efficiency
- Double-conversion topology. The Eaton 9PX constantly monitors power conditions and regulates voltage and frequency.
- With up to 95% efficiency in online double-conversion mode and 98% in high-efficiency mode the 9PX provides the highest efficiency level in its class to reduce energy and cooling costs.
- With a 0.9 power factor the 9PX delivers 28% more power than any UPS in its class. It powers more servers than other UPSs with equivalent VA ratings and lower power factors.
- With a RT (Rack/tower) versatile form factor the 9PX is the most compact solution in its class delivering up to 5400 W in only 3U and 10 kW in only 6U.

### Manageability
- The new graphical LCD provides clear information on the UPS's status and measurements on a single screen (in seven languages). LCD display position can be adjusted to offer the best viewable angle for tower and rack usage.
- The 9PX can meter energy consumption. kWh values can be monitored using the LCD or Eaton's Intelligent Power® Software.
- Load segment control enables prioritised shutdowns of nonessential equipment to maximise battery runtime for critical devices. It can also be used to remotely reboot locked-up network equipment or to manage scheduled shutdowns and sequential start-ups.
- The 9PX offers Serial, USB and relay connectivity, plus an extra slot for an optional card (Network card delivered as standard on Netpack version). Eaton's Intelligent Power® Software is compatible with all major OS including virtualisation software such as VMware and Hyper-V is included with each UPS.

### Availability and Flexibility
- The internal bypass allows service continuity in case of internal fault, a maintenance bypass is also available (as standard on HotSwap version) for easy replacement of the UPS without powering down critical systems.
- The 9PX can be paralleled to achieve twice the power of unitary product using HotSync technology, without extra cost on the initial purchase.
- Stronger, longer battery life: Eaton ABM® battery management technology uses an innovative three-stage charging technique that extends battery life by up to 50%.
- More runtime can be added with up to 12 external hot-swappable battery modules, able to run systems for hours if necessary. The additional battery modules are automatically recognised by the UPS.

# Eaton 9PX UPS

1 Remote Off/On and Remote Power Off connectors

2 Slot for Network-MS, ModBus-MS or Relay-MS cards

3 Parallel operation port (DB15)
4 External battery module (EBM) connector with automatic detection (RJ11)

5 8 IEC 10 A sockets (2 groups of 4 manageable sockets) with cable retention system

6 2 IEC 16 A sockets with cable retention system

7 DB 9 with output contacts

8 USB and serial ports

9 Input/Ouput connection

*Eaton 9PX 6 kVA 1:1*

# Eaton BladeUPS
## 12/24/36/48/60 kW

**An Eaton Green Solution**

*Due to outstanding green performance, Eaton BladeUPS has earned the "An Eaton Green Solution"™ label*

**Advanced power protection for:**

- Small, medium and large data centres
- Blade servers
- Network environments
- Telephony and VoIP equipment
- Networking applications such as IPTV, security
- Storage devices: RAID, SAN

## Designed for data centres – to ensure maximum uptime and efficiency

### Simply scalable

- Eaton BladeUPS provides scalable double-conversion backup power
- BladeUPS is designed for the data centre-to work in harmony with your servers and IT equipment to ensure maximum uptime and maximum efficiency
- Scalable architecture enables you to design, scale and grow your data centre as your demand grows.
- BladeUPS provides from 12 kW to 60 kW N+1 mounted in a single IT rack enclosure, with multiple power distribution options
- BladeUPS delivers an industry-leading 98% efficiency across the operating range, resulting in cooler operating conditions and less heat dissipation

### Highly flexible

- BladeUPS is extremely flexible and supports multiple configurations including power protection in each rack, centralised protection, zone protection or hybrid as required
- If your needs change or need to move your IT equipment, simply redeploy and reuse BladeUPS as single of parallel units elsewhere
- Multiple external batteries can be added to increase runtime
- BladeUPS has multiple power distribution options including the Rack Power Module (RPM), ePDUs or hardwired. The 3U RPM delivers single-phase power and can be deployed in the same rack as the UPS and IT equipment.

### Highly efficient

- Optimize your operational expenditure- Latest high efficiency technologies provide 98% efficiency, with 65% less heat dissipation to minimise your operational costs and reduce your carbon footprint
- A 60 kW N+1 solution could save over 20,000 in 5 years in energy costs alone
- The small footprint of BladeUPS allows extra space for IT equipment in the rack and data centre.
- Due to the low heat dissipation, air conditioning requirements are reduced by up to a third and BladeUPS can be located close to IT equipment.
- Utilises Eaton's Advanced Battery Management system to prolong battery life by up to 50%

# Eaton BladeUPS

## TECHNICAL SPECIFICATIONS

### General

| | |
|---|---|
| Power Rating | 12 kW per UPS module |
| Efficiency | Up to 98.6% |
| Heat Dissipation | 371 W/1266 BTU/hr at 100% rated load |
| Cooling | Fan cooled, temperature microprocessor monitored; front air entry, rear exhaust |
| Audible Noise, Normal Operation | <60 dBA at 1 meter |
| Altitude Before Derating | 1000 m (3300 ft ASL) |

### Input

| | |
|---|---|
| Input Voltage | 400 Vac |
| Voltage Range | 400 V: 311 to 519 Vac, phase to phase |
| Frequency Range | 50 or 60 Hz, ±5 Hz |
| Input Current Distortion | <5% with IT loads (PFC power supplies) |
| Input Power Factor | >0.99 with IT loads (PFC power supplies) |
| Inrush Current | Load dependent |
| Input Requirements | Three-phase, four-wire + ground |
| Bypass Source | Same as input (single feed) |
| Generator Compatibility | Fast sync slew rate for generator synchronisation |

### Output

| | |
|---|---|
| Rated Output Voltage | 400 V: 180 to 240 Vac, Ph to N |
| Output Configuration | Three-phase, four-wire + ground |
| Output Frequency (nominal) | 50 or 60 Hz auto-detection on startup |
| Frequency Regulation | 0.1 Hz free running |
| Load Power Factor Range | Lagging: 0.7 Leading: 0.9 |
| Total Output Voltage Distortion | <3% with IT loads (PFC power supplies) <5% non-linear or non-PFC power supplies |

### Battery

| | |
|---|---|
| Battery Type | VRLA - AGM |
| Battery Runtime (Internal) | 13 minutes at 50% load 4.7 minutes at 100% load |
| Battery String Voltage | 240 Vdc |
| Battery Test | Automatic battery test standard (remote scheduling capable) Manual battery test from front display |
| Battery Recharge Profile | ABM three-stage charging technology |
| Battery Cut-off Voltage | Variable from 1.67 VPC at <5 min. runtime |
| Battery Low Condition | Announced with alarm |
| Extended Battery Capability | Yes, add up to four additional 3U battery enclosures (~34 min at 100% load, >1 hour at 50% load) |

### Physical

| | |
|---|---|
| Dimensions (HxWxD) UPS | 261 (6U) x 442 x 660 mm |
| Note: Total Chassis Weight without batteries or electronics | 46 kg |
| Total Chassis Weight with batteries or electronics | 140 kg |
| Total UPS Weight without Batteries | 61 kg |
| Total UPS Weight with Batteries | 140 kg |
| EBM Weight | 77 kg |

### Communications and User Interface

| | |
|---|---|
| Software Compatibility | UPS ships with Software Suite CD |
| X-Slot Bays | Two available for the cards listed below |
| Control Panel LCD | Two lines by 20 characters Four menu-driven interface buttons Four status at a glance LEDs |
| Multi-language | English standard; 20 languages available |
| Configuration Changes | User capable, firmware auto configures |
| Dry Contact Inputs | Two, user-configurable |
| Dry Contact Outputs | One, user-configurable |

### Service

| | |
|---|---|
| Installation | User capable, located in the IT racks |
| Preventative Maintenance | User capable, optional factory service available |
| Corrective Maintenance | User capable, optional factory service available |
| Serviceability Features | Hot-swappable batteries Hot-swappable electronics module Automated internal maintenance bypass Auto-configure firmware Flash firmware upgradeable |

### Certifications

| | |
|---|---|
| EMI | IEC 62040 |
| Surge Protection | ANSI C62.41, Cat B-3 |
| Hazardous Materials (RoHS) | EU Directive 2002/95/EC Category 3 (4 of 5) |

### Warranty

| | |
|---|---|
| Standard | 12 months |
| Warranty Repair | Factory depot repair or replace |

### Options and Accessories

Detachable input cord

Detachable input/output cord assembly

Detachable paralleling cord assembly

Extended Battery Modules (EBMs)

3U output sub-distribution module

0U to 3U rack power strips

60 kW BladeUPS Parallel Bar

Four-post rail kit

### Optional X-Slot Communication Cards

| Application | Card |
|---|---|
| Web SNMP | ConnectUPS-X Web/SNMP Card |
| Environment Monitoring | EMP Environmental Monitoring Probe (requires Web/SNMP card) |
| IBM eServer™ (i5™, iSeries™, or AS/400), industrial | Relay Interface Card |
| Parallel | Hot Sync Card |
| Remote LCD Display | ViewUPS-X |

### Recommended ePDU:

| | |
|---|---|
| Y032440CD100000 | RPM - Rack Power Module (BladeUPS in, 12xC13 + 6xC19 out) 20 ft lead |
| PW107BA0UC08 | ePDU - Basic (0U, Dual 16 A C20 in, 24xC13+ 8xC19 out) use in addition to RPM |
| PW107MI0UC08 | ePDU - IP Monitored (0U, Dual 16 A C20 in, 24xC13+ 8xC19 out) use in addition to RPM |

# Eaton 9155 and 9355 UPS
## 8/11/12/15 kVA

**Advanced power protection for:**

- Banking systems
- Small server and computer rooms
- Healthcare equipment
- Network communications equipment
- Security systems
- Automation systems

**Double-conversion UPS**

### Premium power performance

- Double-conversion topology provides the highest level of protection available by isolating the output power from all input anomalies.
- With a transformer-free design and sophisticated sensing and control circuitry the 9155/9355 delivers an efficiency of up to 92%.
- Active power factor correction (PFC) provides unbeatable 0.99 input power factor and less than 4.5% ITHD, thus eliminating interference with other critical equipment in the same electrical network and enhancing compatibility with generators.
- With 0.9 output power factor, UPS is optimized to protect modern IT equipment without need to oversize.

### True reliability

- Patented Powerware HotSync® technology enables paralleling of two or more UPS modules to increase availability or add capacity. The technology enables load sharing without any communication line, thus eliminating single point of failure.
- ABM® technology charges batteries only when necessary, reducing batteries corrosion and prolonging batteries service life by up to 50%.
- Internal batteries in all standard configurations provide an extended runtime with the smallest footprint.

### Extensive configurability

- Further runtime extension is possible with external battery cabinets.
- A multilingual graphical LCD display makes possible to monitor the UPS status easily.
- The 9155/9355 can also be integrated into network management, industrial automation and building management systems.
- Bundled Eaton Software Suite provides an orderly network shutdown in an event of extended power outage.

# Eaton 9155/9355 UPS 8-15 kVA

## TECHNICAL SPECIFICATIONS

### UPS output power rating (0.9 p.f.)

| kVA | 8 | 10 | 12 | 15 |
|-----|-----|-----|-----|-----|
| kW | 7.2 | 9 | 10.8 | 13.5 |

### General

| | |
|---|---|
| Efficiency in double conversion mode (full load) | 92% |
| Efficiency in double conversion mode (half load) | 90% |
| Efficiency in high efficiency mode | up to 98% |
| Distributed parallelling with Hot Sync technology | 4 |
| Field upgradeable | yes |
| Inverter/rectifier topology | transformer-free IGBT with PWM |
| Audible noise | <50 dB |
| Altitude (max) | 1000 m without derating (max 2000 m) |

### Input

| | |
|---|---|
| Input wiring | 1 ph or 3 ph + N + PE |
| Nominal voltage rating (configurable) | 220/380, 230/400, 240/415 V 50/60 Hz |
| Input voltage range | Low -20% at 100% load/-50% at 50% load without battery discharge; High +10% /max +20% |
| Input frequency range | 45-65 Hz |
| Input power factor | 0.99 |
| Input ITHD | less than 4.5% |
| Soft start capability | Yes |
| Internal backfeed protection | Yes |

### Output

| | |
|---|---|
| Output wiring | 1 ph or 3 ph + N + PE |
| Nominal voltage rating (configurable) | 220/380, 230/400, 240/415 V 50/60 Hz |
| Output UTHD | <3% (100% linear load); <5% (reference non linear load) |
| Output power factor | 0.9 (e.g. 9 kW at 10 kVA) |
| Permitted load power factor | 0.7 lagging - 0.8 leading |
| Overload on inverter | 10 min 100-110%; 1 min 110-125%; 5 sec 125-150%; 300 ms >150% |
| Overload when bypass available | 60 min 100-110%, 10 min 110-125%; 1 min >125-150% |

### Battery

| | |
|---|---|
| Type | Maintenance free VRLA batteries, NiCd |
| Charging method | ABM technology or Float |
| Temperature compensation | Optional |
| Battery nominal voltage (lead-acid) | 384 V (32x12 V, 192 cells) |
| Charging current / Model | Default 3 A *Max 30 A |

*May be limited by maximum UPS input current rating

### Accessories

Isolation transformer, long-life batteries, external battery cabinets, UPS Centre (input, bypass, distribution), X-Slot connectivity (Web/SNMP, ModBus/Jbus, Relay, Hot Sync, ViewUPS-X remote display), Hot Sync parallel tie cabinet, integrated manual bypass, external maintenance bypass switch

### Communications

| | |
|---|---|
| X-Slot | 2 communication bays |
| Serial ports | 1 available |
| Relay inputs/outputs | 2/1 programmable |

### Compliance with standards

| | |
|---|---|
| Safety (CB certified) | IEC 62040-1, IEC 60950-1 |

# Eaton 9355 UPS

## 20/30/40 kVA

**Advanced power protection for:**

- Financial systems
- Medium-sized servers and computers
- ICT equipment
- Critical building infrastructure
- Industrial applications

**Double-conversion UPS**

### Premium power performance

- Double-conversion topology provides the highest level of protection available by isolating the output power from all input anomalies.
- With a transformer-free design and sophisticated sensing and control circuitry the 9355 delivers an efficiency of up to 93%.
- Active power factor correction (PFC) provides unbeatable 0.99 input power factor and less than 4.5% input ITHD, thus enhancing compatibility with generators and eliminating interference with other critical equipment in the same network.
- The UPS enables optimal power protection for modern 0.9 p.f. rated IT equipment without the need to oversize.
- The 9355 design is also available with 1-phase output (9155) at 20-30 kVA power ratings.

### True reliability

- Patented Powerware Hot Sync® technology makes possible to parallel two or more UPSs to increase availability or add capacity. The technology enables load sharing without any communication line, thus eliminating single point of failure.
- ABM® technology charges batteries only when necessary, preventing batteries corrosion and prolonging batteries service life by up to 50%.
- Internal batteries in all standard configurations support more runtime than comparable UPS.

### Extensive configurability

- Configurable and multilingual LCD control panel with back light and graphical mimic screen monitors the UPS status easily.
- Connectivity options guarantee a smooth integration with various application systems requirements.
- Bundled with Eaton Software Suite the 9355 provides an orderly network shutdown in an event of extended power outage. If required, the 9355 can also be integrated to network management, industrial automation and building management systems.

## TECHNICAL SPECIFICATIONS

### UPS output power rating (0.9 p.f.)

| kVA | 20 | 30 | 40 |
|---|---|---|---|
| kW | 18 | 27 | 36 |

### General

| | |
|---|---|
| Efficiency in double-conversion mode (full load) | 93% |
| Efficiency in double-conversion mode (half load) | 91% |
| Distributed paralelling with Hot Sync technology | 4 |
| Field upgradeable | yes |
| Inverter/rectifier topology | Transformer-free IGBT with PWM |
| Audible noise | <50 dB |
| Altitude (max) | 1000 m without derating (max 2000 m) |

### Input

| | |
|---|---|
| Input wiring | 3 ph + N + PE |
| Nominal voltage rating (configurable) | 220/380, 230/400, 240/415 V 50/60 Hz |
| Input voltage range | Low -20% at 100% load/-50% at 50% load without battery discharge; High +10%/max +20% |
| Input frequency range | 45-65 Hz |
| Input power factor | 0.99 |
| Input ITHD | less than 4.5% |
| Soft start capability | Yes |
| Internal backfeed protection | Yes |

### Output

| | |
|---|---|
| Output wiring | 1 ph or 3 ph + N + PE |
| Nominal voltage rating (configurable) | 220/380, 230/400, 240/415 V 50/60 Hz |
| Output UTHD | <3% (100% linear load); <5% (reference non linear load) |

| | |
|---|---|
| Output power factor | 0.9 (e.g. 27 kW at 30 kVA) |
| Permitted load power factor | 0.7 lagging - 0.8 leading |
| Overload on inverter | 10 min 100-110%; 1 min 110-125 %; 5 sec 125-150%; 300 ms >150% |
| Overload when bypass available | 60 min 100-110%, 10 min 110-125%; 1 min >125-150% |

### Battery

| | |
|---|---|
| Type | Maintenance free VRLA batteries, NiCd |
| Charging method | ABM technology or Float |
| Temperature compensation | Optional |
| Battery nominal voltage (lead-acid) | 432 V (36x12 V, 216 cells) |
| Charging current / Model | Default 3 A *Max 60 A |

*May be limited by maximum UPS input current rating

### Accessories

Isolation transformer, long-life batteries, external battery cabinets, X-Slot connectivity (Web/SNMP, ModBus/Jbus, Relay, Hot Sync, ViewUPS-X remote display), Hot Sync parallel tie cabinet, integrated manual bypass, external maintenance bypass switch

### Communications

| | |
|---|---|
| X-Slot | 2 communication bays |
| Serial ports | 1 available |
| Relay inputs/outputs | 2/1 programmable |

### Compliance with standards

| | |
|---|---|
| Safety (CB certified) | IEC 62040-1, IEC 60950-1 |
| EMC | IEC 62040-2 |
| Performance | IEC 62040-3 |

### Standard UPS with 3-phase input

| Part number 9355 | Description | Rating | Runtime (pf 0.7) | Dimensions (HxWxD) | Weight |
|---|---|---|---|---|---|
| 1025061/1026598 | 9355/9155-20-N-5-1x9 Ah-MBS | 20 kVA / 18 kW | 5 min | 1684x494x762 mm | 300 kg |

# Eaton 93E UPS

## 80/100/120/160/200/300/400 kVA

*93E 80-200 kVA*

**Advanced power protection for:**

- Financial services
- Building management
- Telecommunications
- Industrial automation equipment
- Healthcare
- Government
- Data centres

### Double-conversion UPS

### Simply effective power protection

- Double-conversion provides the highest level of protection available by isolating the output power from all input anomalies.
- With a transformer-free design and sophisticated sensing and control circuitry the 93E UPS delivers an efficiency of up to 98.5%.
- Active power factor correction (PFC) provides unbeatable 0.99 input power and <5% ITHD, thus eliminating interference with other critical equipment in the same network and enhancing compatibility with generators.
- The UPS is optimized for protecting modern 0.9 p.f. rated IT equipment without the need to oversize.

### True reliability

- Patented Powerware Hot Sync® technology makes possible to parallel up to 3 UPSs in capacity and up to 4 UPSs in redundancy. The technology enables load sharing without any communication line, thus eliminating single point of failure and increasing power availability.
- ABM testing and charging cycle helps you to prevent battery problems and in addition lessens corrosion prolonging battery service life up to 50%.

### Extensive configurability

- The 93E offers over 20% smaller footprint compared to competitive UPS offerings.
- A multilingual graphical LCD display makes possible to monitor the UPS status easily.
- Wide software and connectivity options provide monitoring, management and shutdown capabilities over the network.
- Connectivity options are available to suit nearly any communication requirements, from standard serial communications to secure remote monitoring over the Web.

### Cost savings and sustainability

- A new technical platform used in Eaton´s three-phase UPS products guarantee easy upgrades, low MTTR, similarity on service trainings and documentation, thus lowering total cost of ownership.
- A range of service agreement options can be easily customized for customers' needs and budget.

# Eaton 93PM UPS
## 30/40/50/80/100/120/150/160/200 kW

**An Eaton Green Solution**

*Due to outstanding green performance, the Eaton 93PM UPS has earned the "An Eaton Green Solution"™ label*

**Key applications**

- Small, medium and large data centres
- Modular and virtualised data centres
- Mission-critical applications
- IT infrastructure

## Maximum energy efficiency.
## Minimum operating costs.

### Lowest total cost of ownership

- The 93PM UPS sets new standards, with an operating level of up to 97% in double-conversion mode resulting in significant savings in operational costs.
- > 99% superior efficiency is delivered in Energy Saver System mode (ESS).
- Maximal power and energy density ensures a compact footprint.

### Highly scalable and reliable

- Scalable, modular architecture and 'Pay as you grow capability minimises CapEx.
- Eaton's unique Hot Sync wireless paralleling and internal redundancy ensures maximum availability and high reliability.

### Easy deployment

- Thermal management support allows for flexible installation against the wall, in rows and in hot/cold aisle configurations.
- Easy access allows fast MTTR (mean time to repair).

### Easy management

- The 93PM UPS comes with Web and SNMP interfaces as standard.
- Intelligent Power® software integrates with leading virtualisation management systems for monitoring and managing.
- The intuitive user LCD interface and visual data logging provides clear information on the UPS status.

## TECHNICAL SPECIFICATIONS

### General

| | |
|---|---|
| UPS output power rating (1.0 p.f.) | 30, 40, 50, 80, 100, 120, 150, 160, 200 kW |
| Efficiency in double-conversion mode | Up to 97% |
| Efficiency in Energy Saver System (ESS) | > 99% |
| Distributed paralleling with Hot Sync technology | Up to 8 units |
| Maximum system power | 1600 kW |
| Field upgradeable | Yes |
| Inverter/rectifier topology | Transformer-free IGBT with PWM |
| Audible noise | 30–50 kW:    < 60 dBA |
| | 80–200 kW:    < 65 dBA |
| | ESS operation:    < 47 dBA |
| Altitude (max) | 1000 m without derating (max 2000 m) |

### Input

| | |
|---|---|
| Input wiring | 3 ph + N + PE |
| Nominal voltage rating (configurable) | 220/380, 230/400, 240/415 V 50/60 Hz |
| Input voltage range | **High** +20% rectifier input, 10% bypass input. **Low** −15% at 100% load, −40% at 50% load without battery discharge |
| Input frequency range | 40–72 Hz |
| Input Power Factor | 0.99 |
| Input ITHD | 30 kW:    < 4.5% |
| | 40–200 kW:    < 3% |
| Soft start capability | Yes |
| Internal backfeed protection | Yes |

### Battery

| | |
|---|---|
| Battery type | VRLA |
| Charging method | ABM technology or Float |
| Battery nominal voltage (VRLA) | 432 V (36 x 12 V, 216 cells) or 480 V (40 x 12 V, 240 cells) **Note:** Strings with different battery voltage may not be paralleled! |
| Charging current maximum | 30–50 kW    16.5 A |
| | 80–100 kW    33 A |
| | 120–150 kW    50 A |
| | 160–200 kW    66 A |
| Battery start capability | Yes |

### Output

| | |
|---|---|
| Output wiring | 3 ph + N + PE |
| Nominal voltage rating (configurable) | 220/380, 230/400, 240/415 V 50/60 Hz |
| Output UTHD | < 1% (100% linear load). < 5% (reference non-linear load) |
| Rated output power factor | 1.0 |
| Permitted load power factor | 0.8 lagging − 0.8 leading |
| Overload on inverter | 10 min 102–110%; 60 sec 111–125%; 10 sec 126–150% 300 ms > 150%. On battery mode 300 ms > 126% |
| Overload when bypass available | Continuous < 125%, 10 ms 1000% **Note:** Bypass fuses may limit the overload capability! |

### Accessories

External battery cabinets with long-life batteries,
External maintenance bypass switch, integrated manual bypass,
MiniSlot connectivity (Web/SNMP, ModBus/Jbus, Relay)

### Communications

| | |
|---|---|
| MiniSlot | 3 communication bays |
| Network/SNMP interface | Yes, standard |
| Serial ports | Built-in host and device USB |
| Relay inputs/outputs | 5 relay inputs and dedicated EPO 1 relay output |

### Compliance with standards

# Power Xpert 9395P UPS

## 275 – 1100 kW

*Power Xpert 9395P UPS*

**Advanced power protection for:**

- Large data centres, infrastructure projects, industrial complexes and other buildings
- Process control equipment
- Healthcare
- Finance and banking infrastructure
- Transportation systems
- Security operations
- Telecommunications installations

### Double conversion UPS

#### 10% more power

- 96.3% double conversion efficiency, delivers 10% more power than the previous 9395 UPS.
- Complete isolation of output power from all input power anomalies, to deliver 100% conditioned, perfect sine-wave output – even during severe power disturbance.
- High efficiency even when UPS load levels are low, optimised by Variable Module Management System (VMMS).
- Energy Saver System (ESS) improves efficiency levels to 99% by suspending power modules when double conversion is not required. Switches to double conversion mode in less than 2 milliseconds in event of pre-set input limits being exceeded. Filtering against fast low-energy transients provided by ESS.
- Producing 18% less heat helps reduce the need for cooling. Designed for continuous operation at ambient temperatures up to 40°C without de-rating. Can also deliver safe power in higher temperatures without shutting down.

#### Ultimate resiliency

- HotSync® patented load-sharing technology enables parallel operating of static converters without communication or load-share signals. Eliminating the communication link eliminates risk of single point of failure.
- One static switch per UPS enables the full bypass capacity to be achieved from day one. Power modules can be added as loads increase.
- Wide power factor range meets rapidly changing load power factor without de-rating.
- Intelligent battery charging through Advanced Battery Management prevents unnecessary charging and significantly retards battery wear rate.

#### Scalability and flexibility

- Number of power modules per UPS can be specified.
- Layout can be chosen to suit installation: back-to-back, L-shaped etc. Front-accessible design minimises installation costs and saves valuable data centre space.
- Preferred bypass topology can be specified. Additional modules can be added as power load increases.
- Centralised multi-module paralleled 9395P systems are supported by the Eaton System Bypass Module (SBM). Available in ratings from 2000 A to 5000 A as standard, the SBM includes a continuous-duty centralised static switch, backfeed protection device and centralised bypass systems.
- Service disconnect in each power module allows easy maintenance while the UPS is supporting the load in double conversion mode.
- More than 90% of materials used can be recycled, decreasing end-of-life impact.

## TECHNICAL SPECIFICATIONS

### UPS output power rating (0.9 p.f.)

| kVA | 300 | 600 | 900 | 1100 |
|-----|-----|-----|-----|------|
| kW | 275 | 550 | 825 | 1100 |

### General

| | |
|---|---|
| Efficiency in double conversion mode (full load) | 95.6% |
| Efficiency in double conversion mode (half load) | 96.3% |
| VMMS (double conversion) | Significantly increased efficiency at low loads |
| Efficiency in Energy Saver System (ESS) | Up to 99% |
| Distributed parallelling with Hot Sync technology | 5 + 1 |
| Internal N+1 redundance capable | In 600 kVA: 300 kVA<br>In 900 kVA: 600 kVA<br>In 1100 kVA: 900 kVA |
| Field upgradable | Yes |
| Inverter/rectifier topology | Transformer-free IGBT with PWM |
| Audible noise | <78 dB; <81 dB (300 and 600 kVA) |
| Altitude (max) | 1000 m without derating (max 2000 m) |

### Input

| | |
|---|---|
| Input wiring | 3 ph + N + PE |
| Nominal voltage rating (configurable) | 220/380, 230/400, 240/415 V 50/60 Hz |
| Input voltage range | +15% / -15% for 400 V or 415 V<br>+15% / -10% for 380 V<br>+10% / -10% for bypass |
| Input frequency range | 45-65 Hz |
| Input power factor | 0.99 |
| Input ITHD | <3% on nominal load in double conversion mode |
| Soft start capability | Yes |
| Internal backfeed protection | Yes, standard |

### Output

| | |
|---|---|
| Output wiring | 3 ph + N + PE |
| Nominal voltage rating (configurable) | 220/380, 230/400, 240/415 V 50/60 Hz |
| Output UTHD | <2% (100% linear load), <5% (non linear load) |
| Output power factor | 0.9 (e.g. 270 kW at 300 kVA) |
| Permitted load power factor | 0.7 lagging - 0.8 leading |
| Overload on inverter | 10 min 100-110%; 30 sec 110-125%;<br>10 sec 125-150%; 300 ms >150% |
| Overload when bypass available | Continuous <115%, 20 ms 1000% Note! Bypass fuses may limit the overload capability |

### Battery

| | | |
|---|---|---|
| Type | VRLA, AGM, Gel, Wet Cell | |
| Charging method | Current limited constant voltage charging, or Eaton Advanced Battery Management (ABM) | |
| Temperature compensation | Optional | |
| Battery nominal voltage (lead-acid) | 480 V (40 x 12 V, 240 cells) | |
| Charging current / Model Max* A | 300<br>120 | 600<br>240 |

*Limited by maximum UPS input current rating

### Dimensions and weights

| | | |
|---|---|---|
| 300 kVA | 1350 x 880 x 1880 mm (wxdxh) | 830 kg |
| 600 kVA | 1890 x 880 x 1880 mm | 1430 kg |
| 900 kVA | 3710 x 880 x 1880 mm | 2520 kg |
| 1100 kVA | 4450 x 880 x 1880 mm | 3120 kg |

### Accessories

External battery cabinets with long-life batteries, X-Slot connectivity (Web/SNMP, ModBus/Jbus, Relay, Hot Sync, ViewUPS-X remote display), integrated manual bypass for 300 kVA model

### Communications

| | |
|---|---|
| X-Slot | 4 communication bays |
| Serial ports | 1 available |
| Relay inputs/outputs | 5/1 programmable |

### Compliance with standards

| | |
|---|---|
| Safety (CB certified) | IEC 62040-1 |
| EMC | IEC 62040-2 |
| Performance | IEC 62040-3 |

# Eaton RP Series IT Rack
42U/48U

## Main Features

- Unobstructed front, rear and top cable access, maximises cabling flexibility for demanding network infrastructure
- Four 482 mm (19 inch) EIA-310-E vertical mounting rails with U-markings
- Tool-less adjustable rail positioning reduces set up and refresh time
- 3 point rail mounting gives superior top to bottom rigidity
- Fast, easily removable doors, left or right hinge
- Split rear doors reduce space requirements on rack back side
- Top panel includes two 150 mm wide cable openings allowing removable covers or brush strip options to accommodate all cabling requirements.
- Lockable, split side panels for quick and easy removal and re-installation for stand-alone and end of row racks
- Side dividers with cable pass-through holes for easy cable management between racks on multiple rack models
- Smart, attractive design with black RAL 9005 colour reflects high quality construction
- Designed to accommodate all Eaton enclosure PDUs, rack mounted UPSs
- Highly flexible accessory mounting options

## All racks include

- Pre-installed grounding system, eliminating time and installation cost
- Pull handles with key locks; other handle types available upon request
- Starter kit including 20 x M6 cage nuts and screws, 20 x M5 accessory mounting screws
- Levelling feet
- Baying kit for multiple rack applications

## Airflow Management

- Zero leakage around the front perimeter guides cool air to IT equipment, significantly increasing cooling efficiency and reducing energy costs
- High flow 75% open perforation doors maximizes airflow, increasing cooling effectiveness of the IT equipment
- Vertical air blanking panels with grommet-covered cable pass-thru on all 800 mm wide models
- Extensive airflow management accessories available

*RP Series rack with 2 installed Eaton ePDUs*

## Main Options & Accessories

- Side panels – aesthetic side cover includes security lock. Supplied in two sections for easy installation
- Sided dividers – separate bayed racks for security and airflow management without adding to rack footprint
- Rack top cable management – flexible distribution of power and network cables with simple installation
- Full selection of cable management accessories
- Blanking panels in a variety of sizes
- Casters – easily install and move rack
- Shelves

# Eaton REC Series IT Rack
## 42U & 47U

**Eaton's REC Series IT racks deliver essential storage and protection for critical IT equipment in small, medium and large data center applications.**

Designed for fast and easy set-up, the REC Series is provided with features IT specialists need in an affordable, ready-to-go enclosure including casters, lockable side panels, truly step-less rail positioning, U-markings and a grounding kit. A full range of easy-to-use cable management, airflow management and storage accessories are also available.

The REC Series can also easily be assembled into aisle containment configurations with pre-fabricated end-of-row doors and horizontal roofs which are simple, fast and easy to install.

Importantly, the REC series provides a foundation for larger variations of Eaton's new Intelligent Power Pod™ platform, which includes UPSs, rack PDUs, power management software, services and IT racks. With this full suite of products, integrators can simply install their preferred IT equipment and software and deliver a fully integrated system to their customer.

**Standard racks include:**

- Fully assembled sturdy rack frame
- Four infinitely adjustable 19" mounting rails, painted steel with U-markings
- Top panel with three large central cover plates for cable and air management, plus 2 additional front-to-back side openings for cable management brush inserts on 800 mm models.
- Split rear doors (800 mm wide models) or single rear door (600 mm wide models)
- Swing handles with key lock
- Lockable sides, no-sides version also available
- Casters and levelling feet
- Grounding kit
- 2 year standard warranty

# Eaton Aisle Containment System
## REC Series IT Racks

**Eaton's Aisle Containment System for the REC Series IT racks delivers energy saving airflow management for small, medium and large data center applications.**

Designed for fast and easy installation, the REC aisle containment system provides an affordable solution for energy saving cold aisle containment installations. This completely modular system allows extensions or reconfigurations as a pod changes or expands.

The system attaches to 42U or 47U high Eaton REC Series racks, and spans 1200 mm wide aisles. Roof panels connect to equal-width racks on either side of the aisle, and can be cut to install fire suppression systems.

Importantly, the REC aisle containment system provides an energy saving envelope for Eaton's new Intelligent Power Pod™ platform, which includes UPSs, rack PDUs, power management software, services and IT racks. With this full suite of products, integrators can simply install their preferred IT equipment and software and deliver a fully integrated system to their customer.

**End-of-Row door kits include:**

- Split, swing-style door pre-assembled with toughened glass window
- Door frame
- All hardware to attach doors to IT racks and floor

**Roof panel kits include:**

- Acrylic panel
- Panel frame with Velcro™ seal
- All hardware to attach panels to racks and adjacent roof panels

# Eaton RE Series IT Rack
## 27U & 42U

**Eaton RE series IT racks deliver essential protection for critical IT equipment in network closet and small server room applications.**

Designed for fast and easy set-up, the RE Series is provided with features IT specialists need in an affordable, ready-to-go enclosure including casters, lockable side panels, step-less rail positioning, U-markings and a grounding kit.
A full range of easy-to-use cable management, airflow management and storage accessories are available.
Importantly, the RE series provides a foundation for Eaton's new Intelligent Power Pod™ platform, which includes UPSs, rack PDUs, power management software, service and the IT rack.
With this full suite of products, integrators can simply install their preferred IT equipment and software and deliver a fully integrated system to their customer.

**Standard racks include:**

- Fully assembled sturdy rack frame
- Four infinitely adjustable 19" mounting rails with U-markings
- Plain top panel with two cover plates for optional airflow or cable management brush inserts
- Perforated steel or glass front door
- Split rear doors (800 mm wide models) or single rear door (600 mm wide models)
- Swing handles with key lock
- Lockable sides, no-sides version also available
- Casters and levelling feet
- Grounding kit
- 2 years standard warranty

# Eaton STS 16

*Eaton STS 16*

### Source transfer system

Power supply redundancy for single-connection circuit equipment. With the Eaton STS 16, power from 2 independent sources can be supplied to servers and circuit equipment which only have one input power supply.

### Redundancy

Only advanced servers are equipped with a dual electrical power supply. A majority of network devices and entry-level servers are single connection witch means that they only have one electrical power input. With the Eaton STS, every critical equipment can be connected to a redundant power supply.
Both sources (primary and secondary) are connected, in a very straightforward manner, to the STS in the base of the rack.
The Eaton STS then controls the redundancy of this electrical power supply. If the primary source fails, transfer to the secondary source is automatic and instantaneous.

### Simple and cost-effective

Considering its advanced design, the price of the Eaton STS is highly competitive compared with the 'dual power supply' options available from suppliers of computer equipment.
1U high, the unit can be installed easily within the rack. Five LEDs indicate the status of the sources and the Eaton STS.

### Reliability

Designed to provide redundancy as close as possible to the equipment, the Eaton STS deploys a 'break before make' technology based on relays:

• In the event of a short-circuit, the Eaton STS ensures that the fault cannot affect the alternative source, so that power continues to be supplied to the fault-free equipment
• Power is transferred without overlap of the sources in order to prevent any node of reliability
• Even if it suffers a fault, the Eaton STS continues to supply power to the equipment from the remaining available source

## Power distribution

The no hassle solution for improving availability and adding flexibility for single phase UPSs.

### Eaton FlexPDU

Having the right connectors just where you need them
- FlexPDUs (Power Distribution Units) are flexible mounting multiway socket blocks for easy connection of multiple loads either as free-standing or on rack-mounted UPSs
- FlexPDUs have a large number of sockets (8 French or Schuko sockets, 6 BS sockets or 12 IEC 10 A sockets) which fit into a very compact unit (1U- 19")
- FlexPDUs are easy to implement into any type of installation: they can be rack mounted horizontally (1U) or vertically or directly onto all Eaton RT format (rack/tower) UPSs

### Eaton HotSwap MBP

- High availability for all UPSs up to 11 kVA.
- HotSwap MBP provides a maintenance bypass for all UPSs. UPSs can be hot swapped or upgraded without interrupting the power supply.
- HotSwap MBP are available with multiple power ratings: 3000 VA, 6000 VA, 11000 VA, 11000 VA (3 ph Input).
- HotSwap MBP provides compatibility with any UPS now and in the future from Eaton or any other supplier
- The HotSwap MBP 3000 VA is available with different output connectors: French, Schuko, British, IEC or terminal blocks (Hard-Wired version).
- When used with a 9PX or 9SX the HotSwap MBP 6000 VA and above are providing information on the Bypass status through the UPS LCD screen.
- HotSwap MBP units can be installed as required; at the back, side, top of the UPSs, or rack-mounted.

# Managed ePDUs

# Advanced Monitored ePDUs

# Switched ePDUs

Managed ePDUs offer data centre managers maximum functionality and flexibility by providing a complete understanding of, and control over, data centre power distribution.

Advanced Monitored ePDUs give data centre managers the detailed, accurate information and understanding needed to run a data centre efficiently and effectively.

Switched ePDUs give control to the data centre managers. They provide the ability to remotely shut off or restart equipment, ensuring that it starts up in the correct sequence with the correct delays, together with overall monitoring for load balancing.

### Monitoring

Highly accurate individual outlet, user-defined group of outlets, branch circuit, and full ePDU monitoring for kWhrs, V, W and A (1% accuracy above 2 A). Also temperature and humidity monitoring in the rack via optional sensors.

Highly accurate individual outlet, user-defined group of outlets, branch circuit and full ePDU monitoring for kWhrs, V, W and A (1% accuracy above 2 A). Also temperature and humidity monitoring in the rack via optional sensors.

Highly accurate monitoring of branch circuit and the ePDU as a whole for kWhrs, V, W and A (1% accuracy above 2 A). Also temperature and humidity monitoring in the rack via optional sensors. Monitor over Ethernet or via Advanced LCD screen on the unit.

### Switching

Individual outlet, sequencing of outlets with delays or cycling, together with user-defined outlet group or branch circuit, enables remote reboot of equipment. Power Scheduling of outlets or outlet groups also available.

—

On, off and reboot control of individual outlets and user-defined group of outlets, together with cycling and sequencing of outlets and branch circuits. Power Scheduling of outlets or outlet groups also available.

### Control

Monitor and control remotely over Ethernet or via Advanced LCD screen on the unit. Communication protocols include HTTP/ HTTPS, DHCP, SNMP v1 and v3, SNTP, SMTP, Telnet, IPv4 and IPv6. Mass configuration and upgrade available.

Includes Eaton's patented flexible mounting system, which ensures ePDUs will fit in any standard 42U IT rack. Eaton Managed ePDUs provide reliable, consistent power distribution at temperatures of up to 50°C.

Cisco EnergyWise compliant.

Monitor and measure key properties and alerts remotely over Ethernet or via Advanced LCD screen on the unit. Communication protocols include HTTP/HTTPS, DHCP, SNMP v1 and v3, SNTP, SMTP, Telnet, IPv4 and IPv6. Mass configuration and upgrade available.

Includes Eaton's patented flexible mounting system, which ensures ePDUs will fit in any standard 42U IT rack. Eaton Advanced Monitored ePDUs provide reliable, consistent power distribution at temperatures of up to 50°C.

Cisco EnergyWise compliant.

Includes Eaton's patented flexible mounting system, which ensures ePDUs will fit in any standard 42U IT rack. Eaton switched ePDUs provide reliable, consistent power distribution at temperatures of up to 50°C.

Cisco EnergyWise compliant.

# ePDU G3 Metered Input

New ePDU G3 Metered Input models feature best-in-class technologies, including ±1% billing grade accuracy, an advanced LCD pixel display showing V, W, A and kWh, a hot-swap meter and the ability to daisy chain four ePDUs to share the same network connection and IP address. Eaton Metered Input ePDUs also provide both rear and side variable button mounting system and Eaton's patented clip foot system.

# ePDU G3 In-Line Metered

New ePDU G3 In-Line Metered Input models upgrade existing basic installation to include, including ±1% billing grade accuracy, an advanced LCD pixel display showing V, W, A and kWh, a hot-swap meter and the ability to daisy chain four ePDUs to share the same network connection and IP address. Eaton In-line Metered ePDUs also provide both rear and side variable button mounting system and Eaton's patented clip foot system.

# ePDU G3 Basic

Designed for reliable and cost effective power distribution, the new ePDU G3 Basic models feature Eaton's patented IEC outlet grip plug retention, colour-coded outlet sections, a low-profile form factor and a high operating temperature. Eaton basic ePDUs also provide both rear and side variable button mounting system and Eaton's patented clip foot system.

# Intelligent Power Software

Intelligent Power™ Software is a suite of productivity tools for power management from Eaton. It greatly simplifies the supervision of power conditions and devices in today's enterprise environment, scaling effortlessly from local area networks with a few UPSs and ePDUs to the most critical virtualised data centres.

Administrators will value the many automatic functions of Intelligent Power Software. Installation requires just a few clicks and a couple of minutes; once the software starts, it will automatically discover manageable equipment.

The Intelligent Power Software architecture makes it very flexible. Completely network-based communications make the server part very suitable for virtualisation, and the web interface allows access from any device with a browser, anywhere in the network. The Dynamic web interface presents the database contents in easy to interpret text, graphs and colours, highlighting the essential points.

The software can take automatic action as well. Events can be set to trigger email sending, notifications and command execution. This way the infrastructure can automatically adapt to extend runtime and alarms with exact data reach the right people in seconds, giving maximum time for action to prevent downtime, reduce mean time to repair and minimise the impact of power events.

Intelligent Power Software incorporates two applications that ensure system uptime and data integrity: **Intelligent Power Manager** and **Intelligent Power Protector.**

## Powering Virtualisation

Virtualisation is driving the deployment of many new applications and data centre demands. It changes the way IT facilities are operated, bringing substantial savings and increasing availability and flexibility of IT applications.

Managing the power infrastructure within a virtual platform is vital for increased uptime and reliability of those applications. To facilitate the management of power devices, the Intelligent Power Manager plugs into leading virtual machine management systems, including VMware® vCenter™ and Citrix XenCenter™, and integrates power management functions to these systems so that all UPSs and ePDUs in the virtual network can be viewed within the same application, together with network, physical server and storage information. In case of a local power failure, it can also trigger vCenter's vMotion™, SCVMM's Live Migration and XenCenter's XenMove™ to transparently move virtual machines from a server affected by a power interruption to an available server on the network, ensuring data integrity and enabling zero downtime.

If controlled graceful shutdown of hypervisors and their guests is sufficient in case of a prolonged power outage, Intelligent Power Protector is ideal for the task. Intelligent Power Protector invokes shutdown or hibernation of virtual machines, signals the hypervisor to shut down and powers off the physical server. It supports VMware, Hyper-V, Xen and KVM platforms.

## Intelligent Power Software snapshot

- Intelligent Power Manager for monitoring and managing power equipment in IT environments
- Intelligent Power Protector for graceful shutdown of operating systems on physical and virtual machines.
- Intuitive web-based user interface
- Seamlessly integrates with leading virtualisation platforms
- Compatible with Eaton and other manufacturers' UPSs as well as Eaton's ePDU products and environmental sensors
- Generic SNMP driver enables monitoring of practically any SNMP enabled device
- Reduces total cost of ownership for the whole monitoring system

## Benefits for virtualised environments

- Intelligent Power Manager integration with VMware's vCenter, Citrix's XenCenter and Microsoft's SCVMM streamlines daily management work and increases productivity.
- View critical power information on UPS, ePDUs and environmental sensors from a virtual machine management dashboard
- Integrate power alarms to vCenter alarm handling and event logging
- Instantly access critical information such as UPS battery status, load levels and alarms
- Intelligent Power Manager can be configured to trigger vCenter's vMotion or Site Recover Manager, XenMove and SCVMM's Live Migration to transparently move virtual machines to a back-up facility.
- Intelligent Power Protector can perform an automatic orderly shutdown of VMware, Hyper-V, Xen and KVM hypervisors and their guest operating systems in case of a prolonged power failure
- Intelligent Power Manager can trigger agentless remote shutdown of hypervisors and NetApp storage.
- Intelligent Power Manager enables IT managers to cap power usage on Cisco UCS servers in order to extend battery runtime during power events.

# Intelligent Power Manager

Intelligent Power Manager is a productivity tool for administrators of multiple power devices and shutdown applications. It delivers the big picture and highlights key data by concentrating information from multiple sources and displaying it in a single view. It also centralises alarm propagation making sure that important events are brought to those who need to know.

Intelligent Power Manager simplifies many routine maintenance tasks, including its own updates. It has an automatic update function which will notify the operator of available upgrades, download and install them. In addition to that, it also checks if there are new versions of shutdown software. Mass upgrade and configuration of cards and applications saves a lot of valuable operator time and reduces the chance of human error.

Intelligent Power Manager manages up to 10 devices at no charge.

Simply purchase a full license and enter the corresponding license key to raise this limit and enable management of 100 or more devices.

**Features:**

- Easily monitor hundreds of power and environmental devices
- Integrates seamlessly with leading virtualization platforms for single pane of glass management
- User-definable tree structure enables grouping, access and management of multiple devices in several locations
- Minimises the effort required in power management system maintenance through mass configuration and firmware management
- Manages all Intelligent Power software instances in the network

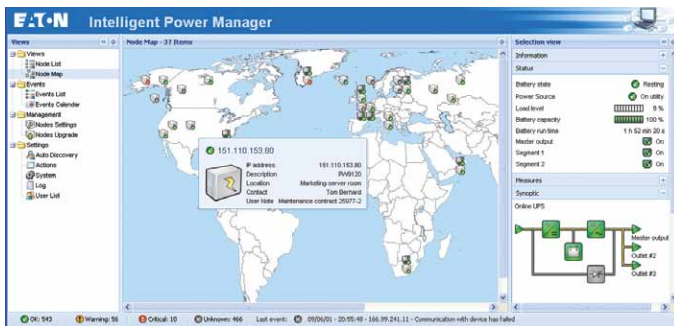

*Global view*

Intelligent Power Manager scales easily from a local area network to a global view, keeping an eye on power conditions and equipment status. In addition to the default maps, it's possible to upload more maps, floor plans and other images. There can be separate views for multiple geographical areas and buildings.

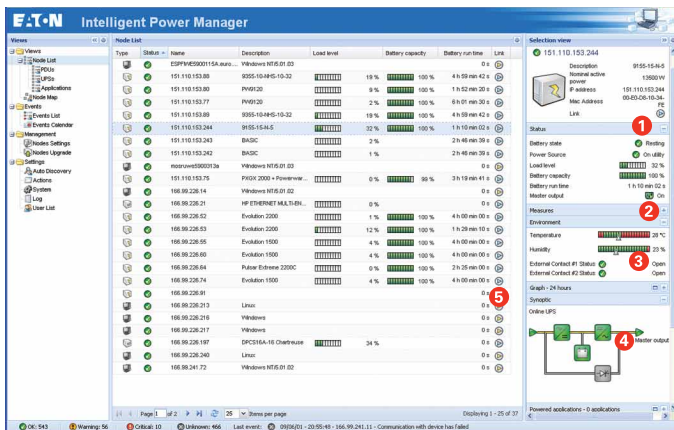

*Main list view*

With Intelligent Power Manager list view, the key operational parameters of multiple devices can be seen at a glance. Users can create their own views and apply several different filters, such as location, equipment type, function and so forth. Activating an entry provides more detailed data in the information panes:

**1** Identification of the device, including equipment type, serial number and user-defined information

**2** Operational status

**3** Readings from optional environmental probe

**4** Synoptic view of power flow

**5** For each node, there is a hyperlink to the web interface of that device

*Graphing tools*

List and map views give an excellent real-time snapshot of a large number of devices, but very often time series data is needed for analysis, planning and problem mitigation. Intelligent Power Software has powerful graphing tools which help in visualising large amounts of data stored in its database. The user can choose which data is graphed and which timescales are used. Exact values are displayed when the pointer is moved over the graph area.

# Intelligent Power Protector

When the power goes out for longer than your available battery runtime, Intelligent Power Protector software facilitates automatic, graceful shutdown of computers, servers and network devices powered by a UPS, saving all work-in-progress and ensuring data integrity (Intelligent Power Protector).

Intelligent Power Protector has also monitoring and alarm handling capabilities making it a complete solution for a single UPS.

**Features:**

- Graceful shutdown of operating systems in case of an extended power failure or other condition that threatens the availability of IT equipment
- Supports Eaton UPS through network, RS232 serial and USB communication
- Supports redundant power supplies and parallel UPS configurations
- Silent unattended installation option
- Manageable with Intelligent Power Manager

Intelligent Power Protector has comprehensive choices for shutdown triggers, timings and modes. User can choose whether the operating system should shut down, hibernate, power off or run a custom script. The start of shutdown can be based on an instant event, delay or the remaining runtime on the UPS.

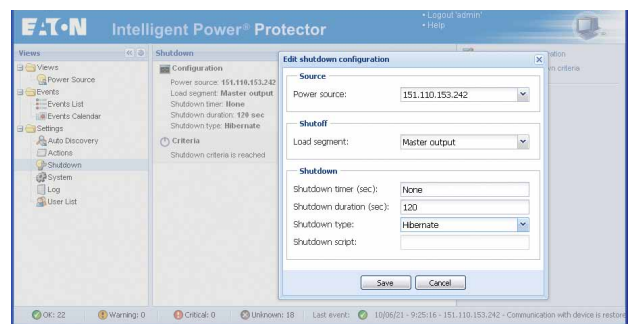

*Shut down settings*

There could be hundreds of UPSs in a network, each powering multiple servers running shutdown software. Managing that kind of setup could easily become a nightmare, especially because new computers are added and old ones moved all the time. Intelligent Power Manager comes to the rescue by clearly showing which Protectors are connected to a particular UPS.

*Powered applications*

Intelligent Power Protector introduces the concept of Virtual Power Source. That could be multiple UPS systems in parallel or several power supplies powering a server. It could be also a combination of other virtual power sources, which allows very complex power schemes to be made understandable to both Intelligent Power Protector and the administrator. It is also possible to set the required level of redundancy.

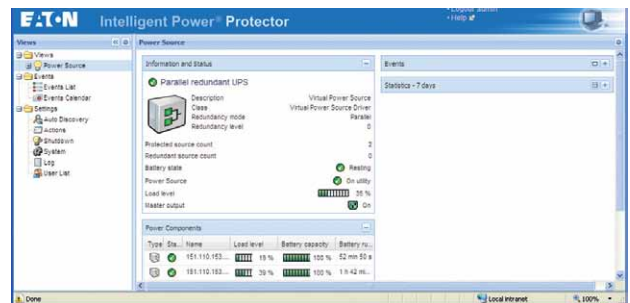

*Support for redundant power*

Intelligent Power Software can perform actions when events of any given type or criticality occur. These actions include notifications on computer screens, custom command execution and email sending. To limit the amount of emails, it is possible to combine several events into a single message. This is a particularly valuable feature in large installations.
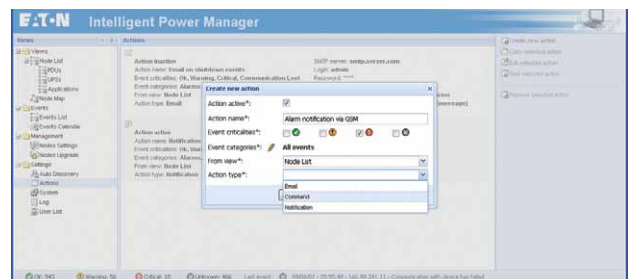

# Connectivity Options

**Web/SNMP cards** are complete UPS monitoring, control and shutdown solutions in a networked IT environment. In case of alert the Web/SNMP card can notify users and administrators through e-mail and SNMP traps. In case of a prolonged power failure the protected computer systems can be shut down in a graceful manner with Intelligent Power Protector software. The unique three-port switching hub on the X-Slot model provides additional network connections.

**ConnectUPS-X**
P/N 116750221-001 for Eaton 9155, 9355, 9395P, BladeUPS.

**ConnectUPS-E**
P/N 116750223-001 is an external model that is connected to a serial port on a UPS. It supports Eaton 9130, 9155, 9355, and 9395P UPS (requires cable 1023247).

**Network Card-MS** Web/SNMP adapter (P/N Network-MS)
The Eaton Network Card-MS supports SNMP v1 and v3; IPv4 and v6; http, https and SMTP
Works with: 5130, 5PX, 9130, EX, 5SC, 5P, 9PX, 9SX, 93E and 93PM

**Environmental Monitoring Probe** (P/N EMP001) adds temperature, humidity and two contact closure monitoring capability to ConnectUPS Web/SNMP cards. It is well suited for monitoring rack temperature and door status, as well as battery temperature. Operating system shutdown can be triggered if user defined thresholds are exceeded or contact closure status changes. EMP works with Network-MS, Network and Modbus – MS, ConnectUPS and PXGX cards as well as network enabled ePDUs.

**Relay/AS400 cards** are an easy connection to IBM AS/400 series computers as well as industrial and building management systems.
P/N 1018460 for Eaton 9155, 9355, 9395P, BladeUPS.
P/N 1014018 for Eaton 9130.
C/N RELAY-MS for 5130, 5PX, EX, 5SC, 5P, 9PX, 9SX, 93E and 93PM

**X-Slot ModBus card** connects the UPS to industrial and building management systems using ModBus/JBUS RTU protocol.
P/N 103005425-5591 for Eaton 9155, 9355, 9395P, BladeUPS.

**Network and MODBUS Card-MS** (P/N MODBUS-MS) offers ModBus RTU in addition to Web and SNMP for 5130, 5PX, 9130, EX, 5SC, 5P, 9PX, 9SX, 93E and 93PM

**PXGX UPS card** (P/N 103007974-5591) offers ModBus TCP as well as Web and SNMP interfaces for 9155, 9355, 9395P and BladeUPS.

**ViewUPS-X remote display** is an LCD panel that lets users view the status of the UPS from as far as 100 m. ViewUPS-X has also four status LEDs and an alarm sound. The display is bundled with a dedicated X-Slot card that also powers the display through the communication cable. In addition to the remote display connection the card has also a SELV isolated relay port for connection to monitoring systems and AS/400 computers.
P/N 1027020 for 9155, 9355, 9395P and BladeUPS.

*ConnectUPS - X*

*Network Card-MS*

*Environmental Monitoring Probe*

*BD relay card (for Eaton 9130 UPS)*

*Relay MS*

*X-Slot relay card*

*PXGX UPS*

*X-Slot Modbus card*

*ViewUPS-X*

*Modbus MS card*

# Green by design

Eaton is constantly working with customers to develop solutions that drive sustainable growth around the globe. Our UPS solutions strive for unparalleled energy efficiency, efficient resource use, maximimum use of recyclable materials and the reduction of emissions throughout the entire life of the product, from cradle to grave.

Our engineers are constantly developing smarter ways to deliver ecological and economic benefits. This includes the development of energy efficient and environmentally friendly technologies.

DESIGN
MANUFACTURING
Green
by design
END OF LIFE
USE PHASE
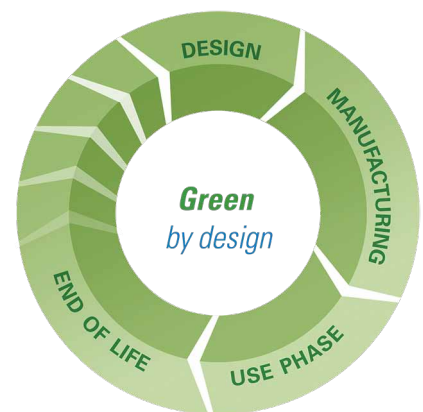

## Design

Taking account of the environment is a part of the design process at Eaton. Four characteristics guide the design team during their work: energy efficiency, resource efficiency, recycling and compliance with regulations.

The Life Cycle Assessment (LCA) process is used to gather information about the potential environmental impact of a product.

✉ LCA@Eaton.eu

Eaton is constantly monitoring the use of hazardous substances and material its design and manufacturing processes. Our products do not contain **REACH** SVHCs (Substances of Very High Concern) and Eaton is seeking to comply with the **RoHS Directive** in advance of it becoming a legal requirement to do so.

The Eaton Green Leaf label is our promise to customers, consumers and our communities, of exceptional and documented environmental performance. Eaton 93PM, Power Xpert 9395P UPS, Protection Station, BladeUPS are exceptional Power Quality products that have been certified as Eaton Green solutions.

## Manufacturing

Eaton is focused on building sustainable operations and managing Environment, Safety and Health (EHS) through standardisation. Our global Managing Environment, Safety and Health (MESH) programme is a unified system that consolidates existing programmes (ISO 14001, OHSAS 18001, OSHA VPP) into a single integrated management system. All EMEA manufacturing locations are ISO14001 certified.

## An Eaton Green Solution

## Use Phase

### Green technologies

| | | |
|---|---|---|
| **Energy Saver System** (ESS) | Enables extremely high energy efficiency and reliability under normal operating conditions | Eaton 93PM and Power Xpert 9395P UPSs |
| **Easy Capacity Test** (ECT) technology | Enables testing of entire power train under full load stress without the need for an external load | Eaton 9355, 93E, 93PM and Power Xpert 9395P UPSs |
| **Hot Sync technology** | Start from a single module and add power when required | BladeUPS, Eaton 9PX, 9155, 9355, 93E, 93PM and Power Xpert 9395P UPSs |
| **Advanced Battery Management** (ABM) technology | Increases the life of batteries by employing a three-stage charging technique | BladeUPS, Eaton 5P, 5PX, 5SC, 9130, 9SX, 9PX, 9155, 9355, 93E, 93PM and Power Xpert 9395P UPSs |
| **Hot-Swappable batteries** | Allows batteries to be replaced or removed one string at a time while the equipment is still running | BladeUPS, Eaton 5130, 5P, 5PX, EX, 9130, 9SX and 9PX UPSs |
| **EcoControl technology** | Automatically disables peripherals when the master drive is turned off | Eaton Protection Station, Ellipse ECO and Ellipse PRO |
| **Variable Module Management System** (VMMS) | Maximises efficiencies at lighter loads without compromising reliability. | Power Xpert 9395P UPSs |

## End of Life

Eaton takes into account the environmental effects of the packaging and the end-of-life processing of our products and to aid more responsible dismantling, end-of-life instructions are available for recyclers.

We are committed to adhering to the following legislation when applicable:

**WEEE** (Directive 2002/96/CE) Waste Electrical and Electronic Equipment

**Batteries** (Directive 2006/66/CE) Batteries and accumulators and waste batteries and accumulators

**Packaging** (Directive 2004/12/CE) Packaging and packaging waste

To find out more about Green by design, please visit: **www.eaton.eu/green**

# Hot Sync Technology

## Paralleling UPS technology

The number one function of a UPS is to supply continuous conditioned, reliable electricity to a critical load. In case of a single unit, reliability can be increased by modular design, where redundant internal modules can take over each others' tasks, if one of the modules fails.

To further increase reliability, a true parallel configuration can be employed, where two or more units share the load. A failed unit is isolated while the remaining ones continue to support the critical load. Competitive UPS products on the market utilise centralised or distributed load-sharing technology with the master-slave principle, which introduces a risk of single point failure. The absolute reliability of a UPS system can be achieved with patented Powerware Hot Sync® parallel load-sharing technology. (**Figure 1**)

Hot Sync technology is designed for parallel redundant N+1 systems to satisfy 24/7 applications. It can also be used in parallel capacity systems to benefit from scalability for customers' ever-increasing load demands modules can share loads without any communication wiring to the outside world.

## User benefits

- Available for both single- and three-phase products to meet any mission-critical need up to 7.7 MW (400 V) systems
- Easy and modular parallel UPS system upgrade with additional capacity or redundancy
- Erases single point of failure, load sharing is not endangered by loss of communication

**Figure 1.** *Power availability with various power supply configurations.*

# Hot Sync Technology

The internal output impedance of a UPS is inherently mainly inductive, i.e. it looks as a small inductor in series with a stiff alternating voltage source. So, if there is any difference between the output voltage phases, it means that there is a power flow from unit to unit, resulting in unequal load sharing. In the **Figure 3**, two units have equal output voltages with phase angle displacement.

The voltage Vdiff and current Idiff between units exhibit a 90 degrees phase shift due to the inductive source impedance. The main voltage (V1 and V2) and the current between units Idiff are in phase resulting in active power flow.

The greater the phase shift, the heavier the power imbalance. If we now introduce a controller to adjust the voltage phase by the output power, the phase difference can be forced to decrease. To adjust the phase difference to zero and to achieve accurate load sharing, we may integrate the measured phase thus arriving at power-controlled frequency. For the purpose of fast frequency locking and to enable synchronisation to external bypass, a term containing the power level change rate is added.

The flow diagram (**Figure 4**) shows how the load sharing proceeds.

The output power is monitored and the new frequency calculated at 3000 times per second. The measurements are also used for fast identification of a failed module. This feature is based on the computation of instantaneous output power. A negative value, even for a single instant, is an indication of an internal failure, e.g. a shorted inverter IGBT. In a response the UPS trips immediately off-line, causing minimal voltage disturbance. This feature is known as 'selective tripping'.

**Figure 3.** *A phase displacement between parallel connected UPS voltages (V1 and V2) causes current flow between the units thus imbalances load share.*

Hot Sync technology allows full maintenance to be performed one-by-one on redundant UPS modules without an external maintenance bypass switch. The critical load does not need to be disconnected from the conditioned power. Scheduled or unscheduled maintenance can be performed with the load supported continuously by the UPS-grade clean power.

**Figure 2.** *Well-balanced load share is achieved by adjusting output frequencies; thus the phase difference between parallel UPS output voltages is forced to zero.*

$$F_n = F_{n-1} - K1(Pn) - K2(Pn)$$

**Where:**

$F_n$ = frequency

$F_{n-1}$ = previous frequency

$P_n$ = power to load

$K1$ = frequency reduction factor

$K2$ = power change rate factor
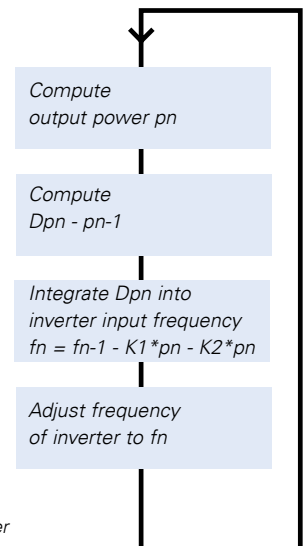

**Figure 4.** *With HotSync algorithm, inverter phase angel is adjusted by output power and its change rate.*

Accurate, equal load share is the number one characteristic to determine the integral quality and reliability of the parallel UPS system providing redundancy or increased capacity. With HotSync technology this is achieved without need for additional communications line between UPSs thus no single point of failure is added when introducing parallel modules to a system. From operational and also economical viewpoint, the achieved "close to perfect" reliability returns clear savings in the long run as every downtime incident is costly and might lead to unpredictable consequences.

# ABM Technology

*ABM technology significantly increases battery service life.*

## Superior battery management

Battery service life is a major contributor to UPS reliability. Since batteries are electrochemical devices, their performance gradually decreases over time. Premature wear-out means higher costs in terms of replacement labour and shorter service cycle. A worn battery entails a risk of unexpected load loss. In normal UPS operation, backup power is needed only occasionally and the battery 'wearing' rate depends strongly on how the full charge is being maintained. Excess charging is detrimental under any operating circumstances.

## Significant extension of battery life

Eaton has created ABM® technology to extend the life of valve-regulated lead-acid batteries by applying sophisticated logic to the charging regime. Using the traditional trickle charge method, batteries become subject to electrode corrosion and electrolyte dry-out, especially in standby service use due to continuous float charging. ABM is essentially an addition of intelligence to the charging routine by preventing unnecessary charging, thus significantly retarding wear-out. ABM provides an additional feature for monitoring battery condition and advance warning about the end of battery life upon detection of a weak battery. It also optimises the recharge time, which is advantageous when there may be consecutive power outages within a short period. ABM has been used for over 15 years is now applied in UPSs up to 1100 kW.

### User benefits

- Predictive and automatic diagnostics of battery health
- Significant extension of battery life compared to traditional charging method
- Optimisation of battery recharging time with dual mode charging method
- Automatic battery charge voltage compensation within 0 to +50ºC temperature range

# ABM Technology
## ABM cycle and operation – how does it work?

The basic idea of ABM is to leave a fully charged battery in rest mode for most of the time, and then apply charge current only at certain intervals. Initially, in order to charge up a fully or partly discharged battery, the charger starts at a constant current appropriate for the battery type used. When the battery voltage reaches a set level, the operation is changed to float mode using a constant but lower voltage, thus providing an optimum recharge time. The battery is kept at this voltage for 24 hours until it comes to the first test point. This takes approximately one minute, and during this period voltage drop measurements are taken while loading the battery, giving an indication of battery condition. The float charging is continued for an additional 24 hours, plus a period equal to 1.5 times the constant current charging time, before the rest mode is

initiated. At this point, charging is discontinued for a maximum of 28 days – as if the batteries were disconnected. During the first 10 days the battery voltage is continuously monitored, and if it drops below 2.1 V/cell, the ABM restarts in charge mode and the user gets a notification of improper battery operation. If it drops below this limit after the 10-day period, charging is resumed without an alarm being raised. In short, the algorithm uses three charging stages in its operation. Thus, the batteries experience much less stress than in the case of traditional charging. A typical battery charging cycle without power interruptions is shown in the graph below.

For convenience, the user has the facility to disable the ABM and instead select continuous 'constant voltage' charging whereby

*Temperature compensated charger between ±0°C...+50°C internal/external measurements.*

the charger uses a constant float voltage. 'ABM enabled' is the default setting. The charger voltage levels are (by default setting) programmed to be dependent on an internal temperature sensor measurement, thus providing further enhancement to battery health. The external batteries can be also provided with temperature dependent charger voltage. For this purpose a Web/SNMP card with Environmental Monitoring Probe (EMP) is required.

*Optional Web/SNMP card with EMP probe for temperature measurement of an external battery cabinet or rack.*

# Energy Saver System

ESS

## Energy Saver System

The rising demand for highly available, reliable and efficient power is a continuous challenge for data centre operators. Higher energy efficiency helps to address increasing environmental, regulatory and economic pressures.

Eaton has developed innovative and proprietary technologies that improve system efficiency without compromising on reliability. Energy Saver System (ESS) is one of these technologies.

## Maximised energy efficiency

With **85 percent reduction in UPS energy losses,** ESS technology dramatically reduces energy consumption, environmental impact and power costs without compromising load protection. With these outstanding energy savings, it is possible to recover the entire cost of the UPS over a three to five year period.

## Applications

**Energy Saver System is available for all Eaton 93PM and Power Xpert 9395P UPSs including:**

- stand-alone single UPSs
- parallel systems
  All existing installations
  can be upgraded with the ESS capability.

**ESS enables market-leading 99 percent efficiency** across the entire operating range. Compared to conventional 'eco-mode' capabilities available with legacy products, ESS offers the best possible efficiency and the fastest transition times to double-conversion when power disturbances occur.

# Energy Saver System

## No compromise on reliability

In ESS mode the UPS safely provides mains current directly to the load when the input is within the acceptable limits by its voltage and frequency. If input power exceeds the predefined limits by frequency or voltage, the UPS switches to double-conversion. If input power is outside the tolerances of the system, the UPS draws power from available battery modules.

Superior detection and control algorithms continuously monitor incoming power quality and allow the UPS to engage power converters in less than two milliseconds when the utility source exceeds predefined limits by its voltage or frequency, thus always providing secured power to the critical load while maximising efficiency. If the UPS detects a fault condition while operating in ESS, it is able to detect and determine whether the fault is caused by the load or if it is upstream from the UPS. A fault at the bypass source results in immediate switchover to the inverter; a fault in the load keeps the UPS in Energy Saver System (ESS).

Proven Eaton technology ensures reliability and continuous load availability without compromising the protection of the supported equipment.

## Extensive configurability

Eaton UPS with Energy Saver System features three configurable modes of operation:

- Standard double-conversion mode: the UPS operates as normal, supplying power through the power converters.
- Energy Saver System: the power converters are in ready state and the static bypass switch allows the UPS to supply mains power directly.
- High Alert mode: the UPS automatically transfers from ESS to double-conversion mode and  in case of multiple recurring utility line disturbances it stays there for a predefined time (default one hour) until it is safe to return to ESS.

The UPS seamlessly executes transitions through different operating modes as needed. This is only possible with transformer-free topologies.
## Availability

ESS is available for all 93PM and Power Xpert 9395P UPSs. Parallel UPS systems also support operation in ESS mode. Existing installations can be upgraded with ESS capability.
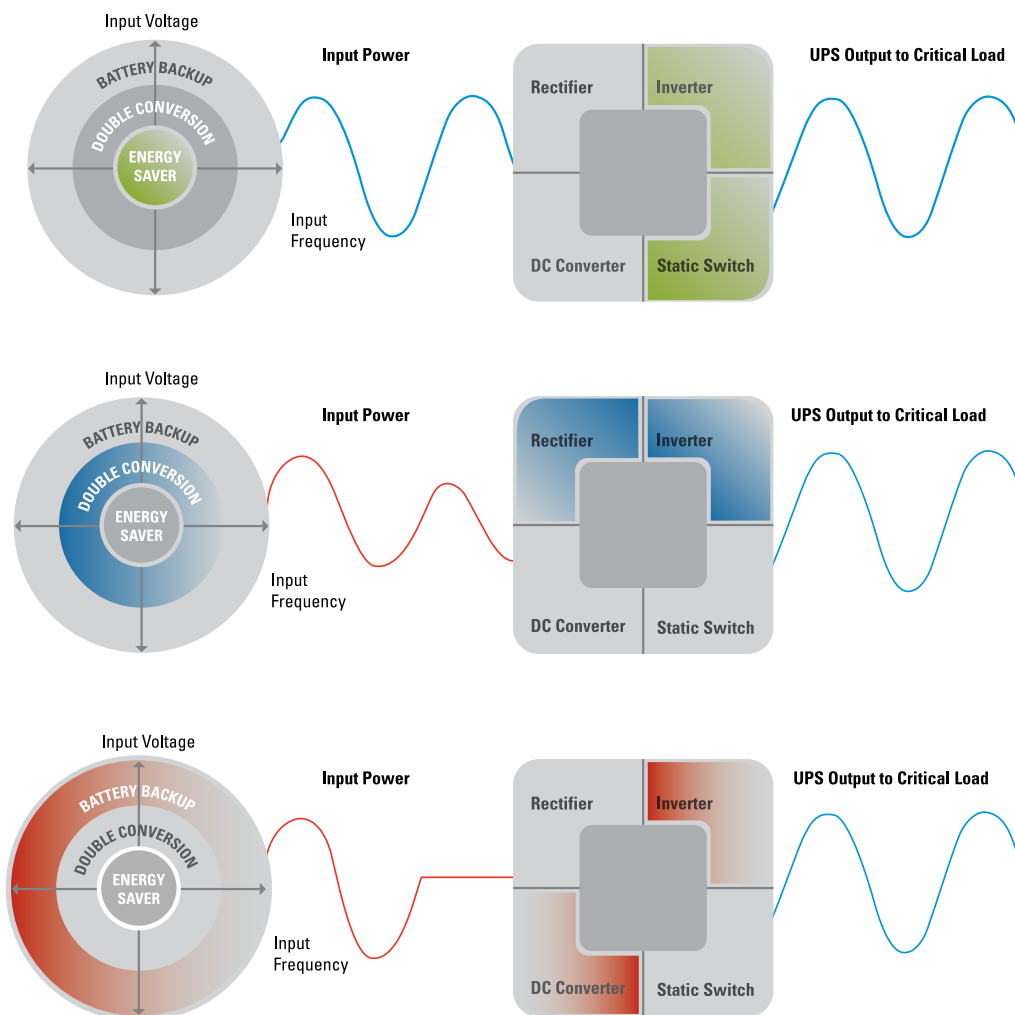

*Active components engaged during Energy Saver System mode*

# Variable Module Management System
## VMMS

### Variable Module Management System (VMMS)

The rising demand for highly available, reliable and efficient power is a continuous challenge for data centre operators. Higher energy efficiency helps to address increasing environmental, regulatory and economic pressures.

Eaton has developed innovative and proprietary technologies that improve system efficiency without compromising on reliability. Variable Module Management System (VMMS) is one of these technologies.

Typical field operations are usually within low load range, but UPSs do not operate at optimal efficiency when used for lighter loads.

In some multi-UPS parallel systems used with lighter loads, the system maximises the load percentage of the UPSs by putting the UPSs that are not needed to power the load into idle mode. This results in partial energy savings and is limited to multi-UPS systems, with no efficiency improvements for -single-UPS systems.

**Variable Module Management System (VMMS)** technology maximises efficiencies at lighter loads without compromising reliability.

## Applications

### Typical applications where VMMS is particularly efficient include:

- UPSs in redundant N+1 and 2N systems
  - Lightly loaded: UPSs in these systems typically operate at low loads, < 45% load level
- Data centres, especially when the UPS system feeds dual-corded servers
- Any applications where load is not constant

*Variable module management technology maximises efficiencies at lighter loads*

# Variable Module Management System (VMMS)

## Maximised energy efficiency

VMMS optimally employs uninterruptible power modules (UPMs) in the UPS to achieve higher efficiencies in double-conversion mode in order to maximise the percentage load level of the remaining active UPMs by switching UPMs that are not needed to ready state*.

This is calculated according to the UPMs' VMMS load threshold – 80% by default – and the system configuration (redundancy requirements). This results in maximised energy savings.

VMMS is only possible thanks to Power Xpert 9395P UPS modularity. VMMS can also be applied in multimodule single-UPS systems.

**\*In "ready state", the UPM rectifies the DC-link, generates logic level PWM (Pulse Width Modulation) signals and filters EMI and lightning spikes.**

## No compromise on reliability

When a disturbance or load increase occurs on a critical bus, all the UPMs in ready state are able to react quickly, immediately switching back to double-conversion mode connecting the existing PWM signals to the IGBT gates.

**In VMMS, all UPMs will switch to double-conversion if:**

- the output voltage fluctuates by more than 3% for any reason
- any UPM reaches its current limit or discharges its battery
- battery recharge is necessary.

Once the above conditions are resolved, the system switches back to VMMS, after a customer-preset time delay (1 to 60 hours): once the load stabilises, Eaton proprietary design and algorithms allow the system to determine which UPMs to switch back to ready state to maximise efficiency according to the new operating conditions.
## Extensive configurability

Customers can decide how to configure their system, establishing the number of redundant UPMs and the max percentage load level per UPM allowed in VMMS setting other UPM's in ready state.

**VMMS can be used in all multi-module (multiple-UPM) Power Xpert 9395P systems:**

- Single 9395P units from 550 kVA to 1100 kVA
- All parallel 9395P systems

**Existing installations can also be upgraded with VMMS capability:**

- VMMS maintains redundancy and achieves higher efficiency by intelligently controlling the load levels of UPMs
- Number of redundant UPMs can be selected (N+0, N+1, N+2, N+X)
- UPMs in ready state can be used as redundant units (N+0)

**VMMS** *Parallel Power Xpert 9395P – 900 kVA modular UPS and VMMS*

Full system efficiency is automatically optimised according to the load level

## Data centre with dual-corded servers, Power Xpert 9395P-900 kVA UPS on A and B side - 320 kVA load

| UPS configuration | Without VMMS | With VMMS |
|---|---|---|
| Efficiency @ 320 kVA load | 94.6% | 96.1% |
| UPS energy savings | Used as reference for savings calculation | 41 MWh / year |
| UPS energy savings | ▪ Industry-leading UPS efficiency in double conversion | ▪ Additional energy savings from reduced cooling in VMMS (typically 30-40% on top of UPS energy savings)<br>▪ UPMs in VMMS ready state available for redundancy |
