Recommended oil and gas solutions

**Fluke solutions can help you maintain operational reliability and environmental safety**

Fluke understands the oil and gas industry faces a range of challenges from dynamic market fluctuations to multiple stringent regulatory requirements, and downtime and inaccurate measurements can cost millions. The professionals that work in oil and gas know it is critical to maintain stable, continuous operations without sacrificing safety.

Onshore or offshore, upstream to downstream, Fluke makes reliable tools that professionals in the oil and gas industry can count on for accurate and consistent measurements. Fluke tools are designed for the demanding oil and gas environment, the people who work there, and the challenges they face every day. With 65 years as the industry leader, they can feel confident that Fluke has the solutions they need to keep the oil and gas industry flowing.

### Oil and Gas—Downstream Solutions

#### Vibrating tester
- Best suited for:
  - Predictive and condition-based maintenance
  - Identifying root cause and diagnosing severity of machine's condition
  - Prioritizing critical repair and replacement options
  - Use with motors, pumps, fans, compressors, belts/chain drives, gears, and engines

#### Power quality analyzers
- Best suited for:
  - Troubleshooting and preventing problems in power generation, transmission and distribution systems
  - Conducting load studies to reduce energy usage
  - Use with motors, pumps, generators, transformers, compressors and electrical panels

#### Process clamp meters
- Best suited for:
  - Measuring 4-20 mA signals without “breaking the loop” in process control systems
  - Sourcing 4-20 mA signals for testing control system I/O or I/Ps
  - Measuring 10-50 mA signals in older control systems using the 99.9 mA range
  - Taking measurements in hard-to-reach and hard-to-see areas

#### Process tools
- Best suited for:
  - Maintenance and calibration of process instruments and control system I/O
  - Measuring, sourcing and simulating 4-20 mA control loops

#### Pressure calibrators
- Best suited for:
  - Pressure calibration of transmitters, gauges, switches and custody transfer meters
  - Calibration of PT instruments with simultaneous pressure and current measurements
  - Calibration of pressure devices using pressure sourcing and mA measurements

#### Multifunction process calibrators
- Best suited for:
  - Calibrating and maintaining process instrumentation and control systems
  - Troubleshooting 4-20 mA loops, temperature, pressure, frequency and transmitters in one tool
  - Performing HART transmitter adjustment

#### Thermal imagers
- Best suited for:
  - Inspecting pipes, motors and pumps
  - Capturing tank levels
  - Quickly detecting “hot spots” in hard-to-reach electrical panels
  - Detection of refractory damage on process heaters
  - Insulation inspection on boilers, gas turbines and regeneration units

#### Pressure calibrators
- Best suited for:
  - Pressure calibration of transmitters, gauges, switches and custody transfer meters
  - Calibration of PT instruments with simultaneous pressure and current measurements
  - Calibration of pressure devices using pressure sourcing and mA measurements

#### Process clamp meters
- Best suited for:
  - Measuring 4-20 mA signals without “breaking the loop” in process control systems
  - Sourcing 4-20 mA signals for testing control system I/O or I/Ps
  - Measuring 10-50 mA signals in older control systems using the 99.9 mA range
  - Taking measurements in hard-to-reach and hard-to-see areas

#### Multifunction process calibrators
- Best suited for:
  - Calibrating and maintaining process instrumentation and control systems
  - Troubleshooting 4-20 mA loops, temperature, pressure, frequency and transmitters in one tool
  - Performing HART transmitter adjustment

#### Pressure calibrators
- Best suited for:
  - Pressure calibration of transmitters, gauges, switches and custody transfer meters
  - Calibration of PT instruments with simultaneous pressure and current measurements
  - Calibration of pressure devices using pressure sourcing and mA measurements

#### Process clamp meters
- Best suited for:
  - Measuring 4-20 mA signals without “breaking the loop” in process control systems
  - Sourcing 4-20 mA signals for testing control system I/O or I/Ps
  - Measuring 10-50 mA signals in older control systems using the 99.9 mA range
  - Taking measurements in hard-to-reach and hard-to-see areas
**Maintenance Superintendent**

**Issues faced:**
- Ensuring uptime is continuous and predictable
- Safety of personnel and the environment
- Maintaining high product quality
- Staying within budget

**Fluke solutions:**
- Process test tools
- Power quality analyzers
- Vibration tester
- Infrared imagers

**Instrument Technician**

**Issues faced:**
- Preventing downtime
- Safety systems testing
- Providing immediate response and repair during process interruptions

**Fluke solutions:**
- Process test tools
- Multifunction process calibrators
- Pressure calibrators
- Temperature calibrators
- Portable oscilloscopes
- Digital multimeters

**Measurement Technician**

**Issues faced:**
- Accurate measurements of flow
- Calibration of flow instruments
- Repair verification

**Fluke solutions:**
- Process test tools
- Pressure calibrators
- Insulation multimeters
- Thermal imagers
- Infrared thermometer

**Electrician**

**Issues faced:**
- Delivering efficient, consistent and quality power from utility or generation to process systems
- Controlling efficient breakers and motors

**Fluke solutions:**
- Process test tools
- Clamp meters
- Power quality analyzers
- Insulation multimeters
- Power loggers
- Earth ground testers
- Infrared thermometer
- Vibration tester

**Mechanic/Millwright**

**Issues faced:**
- Meeting equipment standards and specifications
- Effectiveness of repairs (valve repacking)
- Assembling machinery
- Determining optimal machinery placements

**Fluke solutions:**
- Process test tools
- Thermal imagers
- Infrared thermometers
- Vibration tester
- Infrared thermometer
- Alignment tool

**Fluke gas and oil solutions**
