

CUSTOM CAPABILITIES

PRODUCT PROFILE...

This custom enclosure is ceiling mounted within a train or subway car. The requirements were quite specific because this 27"H X 24"W X 14"D aluminum enclosure had to be engineered and manufactured to fit some specific (and already existing) attachment points which were remnants of a previous application in a very tight space. The application also included some specific anti-vibration mounts which were supplied by the customer and installed prior to shipping.

The customer approached our Director of Engineering, Bill Santucci, at a trade show in Las Vegas. He was looking at one of our wall mounts and remarked how tough it was for him to find an enclosure to meet his specific needs. Within five minutes, Bill was sketching a drawing on a napkin and the client was sold.

With the decades of experience Great Lakes has in-house, those circumstances are becoming more and more common. People are continuing to discover just how affordable Great Lakes' custom engineered products can be, as compared to the intensive modification needed for someone else's standard product.

For most applications, our standard lead time on custom product (six weeks) is just fine for production. For others, who want (or need) custom product much faster, Great Lakes offers a premium "Fast Track" design and production service which can produce product ready for shipment in just 10 working days from signatory approval of drawings. For more information, please contact technical sales at 1-866-TRY-GLCC (879-4522).
