

**Product Announcement: New Addressable Detectors from Fire-Lite Alarms Canada**  
December 2019

Fire-Lite Alarms is pleased to announce the availability of our new line of addressable smoke detectors, bases and accessories for Canada known as the 365 Series. This next generation of detectors has been designed to meet the latest code requirements and features improved fire detection capabilities as well as a more modern design. The 365 Series product line includes photoelectric, photoelectric/thermal, heat and multi-criteria (photoelectric, thermal and infrared) detectors as well as complimentary bases and accessories.

The new 365 Series offers the latest in fire detection technology with improved detection for fires involving synthetic materials and enhanced reliability against false (nuisance) alarms. The 365 Series also offers a more attractive streamlined design available in an expanded color offering including a contemporary white finish to better compliment modern building aesthetics or in traditional ivory for legacy installations. Accessories are available in white, ivory and black to support a variety of applications.

Please note that the white 365 detectors only support LiteSpeed™ protocol while the ivory 365 detectors support both CLIP and LiteSpeed™ protocols. Therefore, ivory devices are fully backwards compatible with all current and legacy Fire-Lite addressable fire alarm control panels (FACPs) while white devices are backwards compatible only with FACPs that support LiteSpeed™ protocol. All devices are backwards compatible with existing B210LP base installations preventing the need to rewire retrofit applications.

The Fire-Lite 365 Series is available now! Contact your preferred Fire-Lite authorized security equipment distributor for ordering and pricing information and visit [firelite.com/ca](http://firelite.com/ca) for more information.

We appreciate your business and continued support of Fire-Lite Alarms products.
