XProtect® Smart Client

milestone

The Open Platform Company

Ultimate usability

Easily manage security installations

Providing a unique combination of control, efficiency and adaptability, the Milestone XProtect Smart Client is the easy-to-use operator tool for daily operation of all Milestone XProtect® software products*. It provides surveillance users with an extremely efficient way of managing installations of all sizes.

Developed by the world's leading manufacturer of IP video management software (VMS), the XProtect Smart Client is used to view and control cameras and access live or recorded video. It provides superior features for instant control of connected
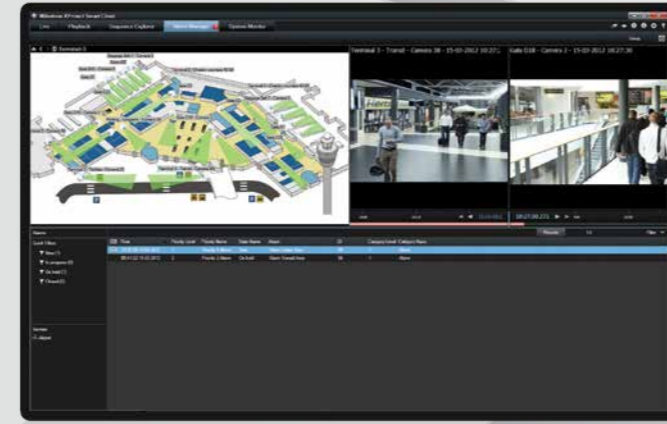

security devices and the interface is easy to adapt according to operator skill level or work tasks.

Additionally, using the Milestone Integration Platform, users can integrate various security and business systems as well as video analytics applications. Integrated systems are accessible directly in the XProtect Smart Client. Using one interface is extremely efficient because the controls are easy to access and operators won't have to be trained on multiple systems.

* Functionality of the XProtect Smart Client is determined by the specific XProtect product platform
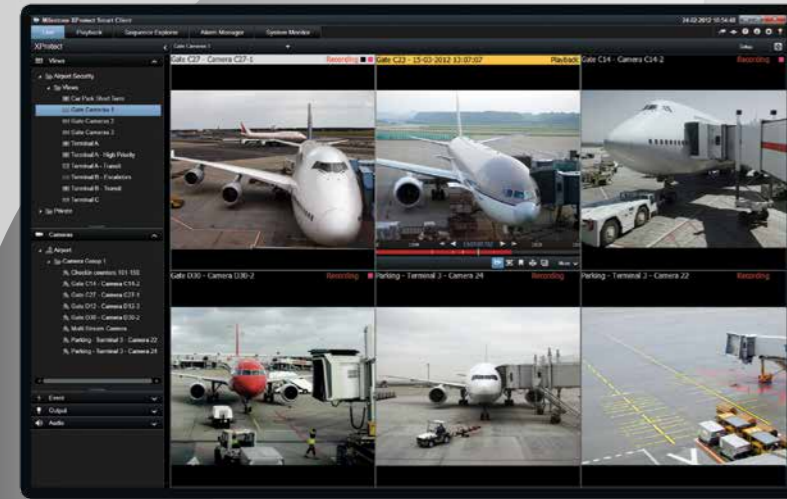

Integrated devices and other connected systems can be controlled directly with **overlay buttons** from the camera view, streamlining workflows and improving operator efficiency.

The Sequence Explorer shows previews of recorded video sequences as drag-and-throw image thumbnails, helping to easily locate evidence for export.
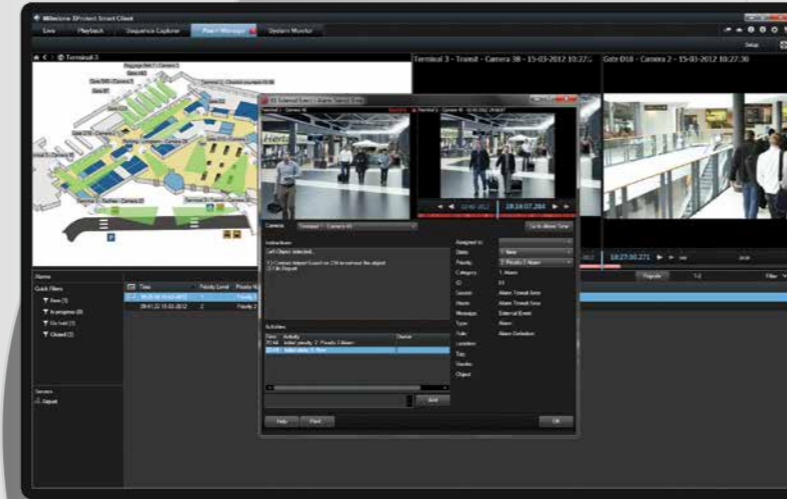

It is easy to export video in multiple formats such as still images, video clips for playback in a media player or in the XProtect® format for our video viewer, the **XProtect® Smart Client - Player**. When exporting to XProtect format, you can add comments to the complete export or to individual cameras.
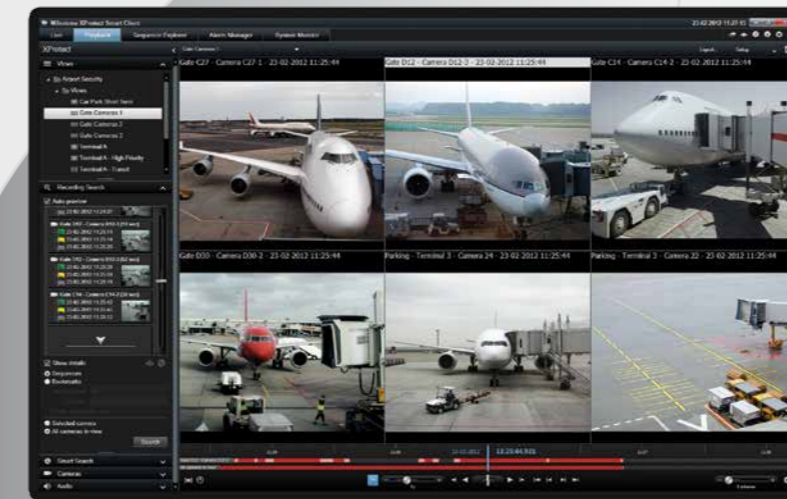

To ensure immediate detection of incidents, system alarms can be set up to notify users of certain events, or if equipment is malfunctioning. Alarms from all connected security devices and systems are consolidated in the easy-to-use **Alarm Manager**.

Monitoring video

Responding to alarms

Investigating incidents

Handling evidence

In the XProtect Smart Client you can efficiently investigate incidents while maintaining a visual on live events with the **independent playback function**. This helpful feature allows you to play back events from one camera while simultaneously viewing live video from other cameras.

The XProtect Smart Client makes responding to alarms fast and effective with the **alarm list**. The alarm list gives a clear overview of active alarms and their severity.

Alarms can be prioritized so the most urgent issues are displayed at the top of the list. Any alarm can be selected

to get a preview of the video related to that alarm. Alarms can be configured so that when they are selected, the alarm location map automatically displays corresponding alarm and camera locations, providing instant visual verification of incidents.

Searching through extensive recordings to find a specific incident can be very time consuming. But the XProtect Smart Client provides advanced features to investigate incidents as they happen while simultaneously analyzing recorded video material.

The new **timeline** combines navigation controls with a main timeline for the selected camera and a consolidated timeline for all the cameras in a view. This makes it easy for operators to gain an overview of recordings.

Smart Search lets you search for motion in one or more selected areas of images from a particular camera, simplifying the search for incidents.
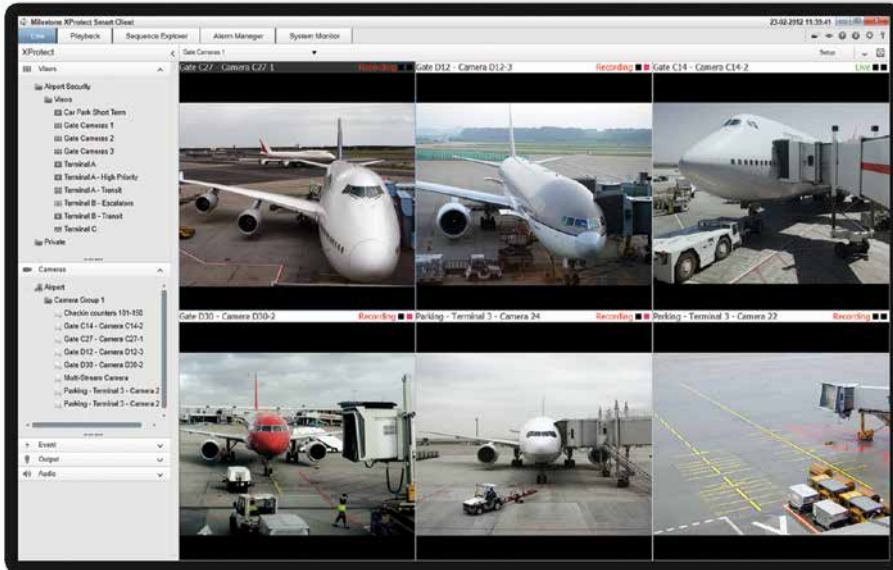

In the XProtect Smart Client you can secure evidence by **encrypting** the video and by including a **digital signature**, ensuring the export cannot be read by unauthorized people and that any tampering can be detected. Additionally, there is an **export option** to disable re-export to prevent sensitive material from being further distributed.
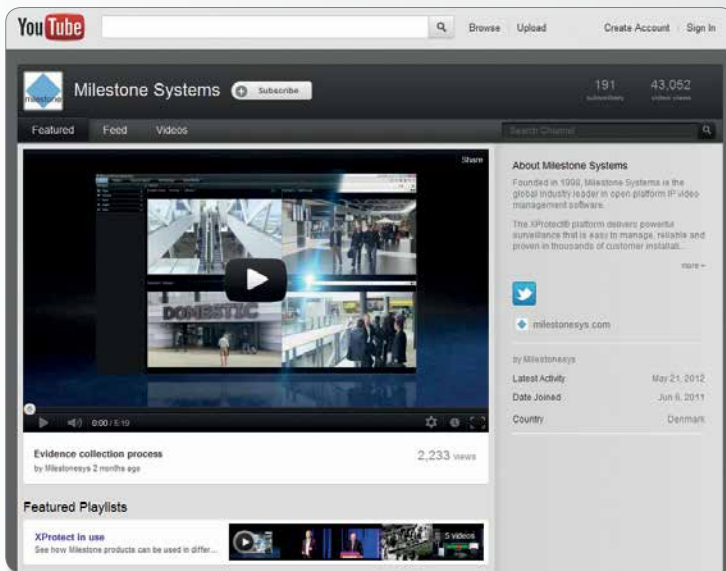

When exporting to media player format, text slides can be added before and after the video export so important information about the export can be explained.

Powerful features for ultimate control

Milestone understands that all installations are unique and have different needs. That is why it is easy to customize the XProtect Smart Client for different tasks and operator requirements. The XProtect Smart Client can also be tailored to specific working environments by selecting a light or dark theme, depending on room lighting or brightness of the video.

Proven in more than 100,000 installations around the world, the XProtect Smart Client fits the needs of a wide variety of customers. Available in 26 languages, the XProtect Smart Client removes the language barrier and helps improve productivity because most operators can use the client in their native language. The XProtect Smart Client fulfills your video management needs whether you have a basic or very complex installation with a wide array of features to **view video, respond to alarms, investigate incidents and handle evidence.**

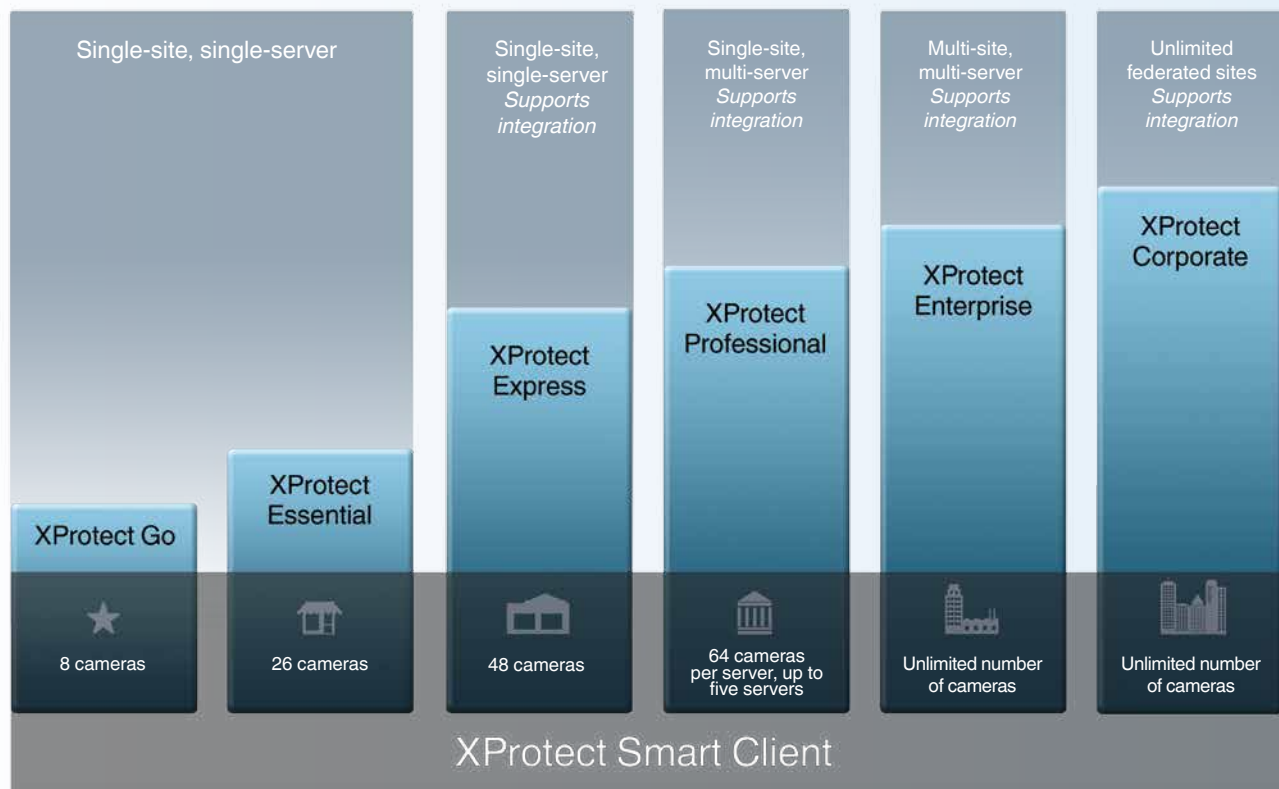

Watch the **evidence collection process** video on our YouTube™ channel to see a demonstration of the described features in the XProtect Smart Client.

The Milestone Open Platform

A foundation for long-term success

Milestone's XProtect open platform video management software (VMS) integrates with the industry's widest choice in cameras, giving you the freedom to choose equipment according to your needs and budget. Committed to providing a true IP video open platform and freedom of choice, Milestone is proud to be among the first VMS vendors to support and lead the future progress of ONVIF and PSIA standards.

Integrate applications and systems into XProtect VMS with the Milestone Integration Platform Software Development Kit (MIP SDK). The open architecture of XProtect, together with the MIP SDK, allows for endless possibilities to add features and functionality for creating powerful, custom surveillance solutions.
