Visual Data Center Rated in Gartner DCIM Report

Here at Optimum Path we are diligently working to establish our software solutions as one of the most capable and well respected options in the industry for DCIM customers. Since our initial dive into the DCIM industry with the release of our Visual Data Center solution in 2007, we have completed multiple software releases, deployed customers in all corners of the world, established multiple global data center OEM relationships and now have two dynamic software platforms available for our customers in the form of Visual Data Center and Visual Cloud Manager. Our company has consistently experienced continued growth in both the number of employees and the bottom line revenue numbers. As we continue to battle in the DCIM arena with multi-billion dollar competitors armed with seven figure marketing budgets, we focus our efforts on progressing the product and improving the experience of our customers. Our relative lack of marketing presence may keep us from being the most well-known DCIM provider, but we like to think of ourselves more as the best kept secret in DCIM. Well, the secret may not be a secret much longer as we continue to improve, grow and receive recognition for the hard work put in to our software solutions.

We are pleased to announce that Gartner has recently released its Critical Capabilities for Data Center Infrastructure Management Tools on March 7, 2016 and Optimum Path received the following ratings in three use cases for our Visual Data Center software platform:

- Colocation Provider – 3rd highest product score out of 9 DCIM providers
- Large-Enterprise – 3rd highest product score out of 9 DCIM providers
- Midsize-Enterprise – 4th highest product score out of 9 DCIM providers

The Gartner Critical Capabilities report reviews DCIM solutions based on the following specific capabilities of the software for end users:

- Power Monitoring
- Environmental Monitoring
- Reporting & Visualization
- Resource Management
- Workflow Integration Management
- Multitenancy

We are extremely pleased with the inclusion by Gartner in their analysis of DCIM providers and we will continue on our path of delivering world class software solutions for our current and prospective customers. To learn more about our software solutions please contact us for a personal demonstration and discussion so we can provide information on how our key capabilities can overcome the shortcomings in your current solutions or procedures.
