## MANAGING YOUR ASSETS THROUGHOUT THEIR COMPLETE LIFECYCLE IN A COMPLETELY NEW WAY

Visual Data Center takes asset management to a whole new level. As a data center manager there are many devices that must be maintained and this number is forever growing. Managing this library of current production assets, staging room assets, decommissioned assets, and even assets that are being shipped to the facility is made easier using Visual Data Center.

Along with knowing device specific nameplate information, one must know where an asset is located within the data center space. In a recent survey, over 20% of data center managers said it takes over 24 hours to locate an asset within the data center. With a click of a button Visual Data Center will allow you to locate down to the exact slot ID of a blade enclosure a devices exact location. VDC provides complete transparency.

VDC maintains a model template database of over 20,000 devices. Our engineers have contacted manufacturers and gained insight into nameplate values that are stored on each model. Each model is made to scale and includes down to the port level detail. VDC also empowers the user to manipulate the model template library. With the detailed specs, the OPI engineers have also created custom images to create exact replicas of the assets. Users of the application also have the flexibility to create their own models with attributes and images.

### MASTER MODEL DATABASE INCLUDES:

- 20,000 models out-of-the-box
- Accurate model templates down to the network and power socket level
- Users can create their own models
- Able to create relationship diagrams between devices
- Track Service and Warranty level information on assets
- Complete Workflow Management tool to track installation/relocation/decommissioning

#### Optimum Path Inc

Optimum Path Inc.™ is a global leader in the development of software for advanced visualization and planning of physical and logical infrastructure for data center facilities. Our brands are sold globally through our strategic reseller network, directly to end-users and rebranded through our technology OEM partners. Many exciting milestones have been achieved since our incorporation in 1999 and we are excited to pursue many more significant milestones in the future as we continue to develop our software solutions.

## DETAILED MODEL LIBRARY

## 3 KEY QUESTIONS

VDC SOLVES...

- 1** **Resolution Time** - Where is my asset located within the data center space?
- 2** **Capacity Planning** - What racks within the data center space can I place this asset?
- 3** **“What If” Scenario** - If this asset goes down, what devices/owners/applications will be impacted downstream?
