Atlas Full Line Catalog

The right solutions to make a difference

With the broadest selection of industry leading components across all lighting technologies, including HID, fluorescent, LED and more, trust Philips to help sustain your success. We have the expertise and high-quality solutions to meet the lighting goals of your customers and one-stop shopping convenience to simplify your procurement.

Each component is sustainably manufactured to the highest standards. As part of this goal, we strive to achieve full RoHS compliance for all products to minimize harmful impact to the environment. Additionally, we participate in the Conflict Free Tin Initiative¹, pledging to source minerals and materials only from conflict-free supply chains.

We also test all components to the highest standards – such as Energy Star, US, ANSI and more – to ensure robust and long-lasting performance.

By operating in this manner, we can help users to reduce energy consumption and related costs, stay ahead of changing government regulations and reflect an environmentally friendly image.

Throughout this catalog, you have fast access to the latest LED and traditional lighting technology components that best meet your needs and those of your customers.

Online tools at your fingertips

Online OEM Lighting Components provides you with...

- Online access to the entire OEM Lighting Components portfolio.
- An easy format to search by product type or name.
- Up-to-date product information so you can always find current specs and literature.
- Drop down menus to help you further refine your options and find the exact product you are looking for.

philips.com/oemna

Easy Design-in Tool provides you with...

- Fast and easy web-based methods to create your ideal system configuration.
- Flexible component choices to inspire your creativity.
- User-friendly graphic interface to save time.

www.na.easydesignintool.philips.com

Online news at your fingertips

The Philips Lighting Blog provides you with...

- A platform to learn more about our latest products and installations.
- A direct connection to thought leaders and product experts within Philips.
- The opportunity to learn more about LED technology, design, sustainability and other important industry topics.
- A chance to contribute to discussions by offering your own insights and experiences.

philips.com/lightingblog

The Philips Twitter Account provides you with...

- Important industry news.
- New product announcements and blog posts.
- Information on our latest lighting installations.

<https://twitter.com/PhilipsLight>

Philips Innovations in Light provides you with...

- An opportunity to collaborate and share knowledge and ideas.
- A chance to get your questions answered by peers or other industry experts.
- A platform to discuss the challenges and opportunities facing our industry.

Versatility delivered

Philips Advance Xitanium LED Drivers

For optimal performance, long-lasting and low-maintenance LED Light Sources require reliable and long-lasting LED drivers matching the long lifetime of the LEDs. Our wide range of Philips Advance Xitanium LED Drivers is specifically designed to operate LEDs in a variety of indoor and outdoor lighting applications and also to meet a wide variety of customer needs, but they can all provide certain common benefits.

Including:

- Reliable and consistent operation
- High efficiency >90% in some cases
- Greater than 0.9 PF and less than 20% THD
- Greater than 50k hrs¹ lifetime
- 5-year limited warranty²
- ROHS compliance³

Philips Advance Xitanium LED Drivers are offered in the following categories:

Fixed

Fixed LED drivers meet basic LED lighting needs with either dedicated input voltage or IntelliVolt option, to suit a wide variety of output current and power requirements.

Dimmable

Dimmable drivers address the growing demand for controllability and flexibility. The adjustable output current (AOC) feature enables operation of various LED configurations from different LED manufacturers and offers “future-proof” solutions for new LED generations. Specialized dimmable drivers enable use of lighting controls to increase energy saving through a wide variety of protocols.

Speed up your business with new wireless programmable LED technology

Philips' new SimpleSet wireless programming technology for LED drivers is designed to help OEMs quickly and easily program LED drivers at any time during the manufacturing, distribution or installation process. Go to www.philips.com/simpleset for more information.

Additional dimmable LED Driver benefits:

- Wide variety of dimming interfaces (0-10V, Phase Cut, Step-Dim)
- Helps address code requirements for energy efficient buildings
- Fixture design flexibility through the AOC feature
- Options such as fan output and module temperature protection

For more driver information, visit www.philips.com/leddrivers or contact your local Philips sales representative.

1. Philips Advance Xitanium LED Drivers are designed and manufactured to engineering standards correlating to an average life expectancy of 50,000 hours of operation at maximum rated case temperature. Minimum 90% survivals based on MTBF modeling.

2. View limited warranty at <http://www.usa.lighting.philips.com/support/support/warranty> for details and restrictions.

3. Restrictions on Hazardous Substances (RoHS) is a European directive (2002/95/EC) designed to limit the content of 6 substances [lead, mercury, cadmium, hexavalent chromium, polybrominated biphenyls (PBB), and polybrominated diphenyl ethers (PBDE)] in electrical and electronic products. For products used in North America compliance to RoHS is voluntary and self-certified.

Wireless, connected, streamlined

Philips Advance Xitanium SR LED Drivers

Uncomplicated and amenable to any sensor or network

In today's digital age, people can gather real-time data and use it to make highly informed decisions in areas from personal finance to time management and much more. However, this method of detailed insight is not relegated to personal use. In fact, it's now possible to wirelessly harvest specific, real-time lighting information in commercial spaces.

Philips Advance Xitanium SR LED Drivers streamline wireless connected lighting. They reduce overall costs by standardizing the digital connection between the driver and sensor, bundling important functionality into the driver and eliminating the need for auxiliary components. Xitanium SR Drivers enable power reporting and dim/on/off functionality at each fixture.

This streamlined approach and easy design-in means that OEMs can spend less time and money to bring products to market. And for your customers, Xitanium SR LED Drivers enhance energy efficiency by monitoring real-time system data and making this information available at any time to the network. It also manages sensors and commands related to occupancy, daylight harvesting and dim-to-off at each luminaire. Together with Philips, it's never been easier to create robust, cutting-edge wireless lighting solutions.

Simplicity for everyone

Using our Xitanium SR LED Drivers, digital system data is collected at each luminaire and then routed wirelessly through your customers' preferred networks. This means that very specific and actionable data can be used to make informed business decisions and optimize resource distribution within workspaces. Go to www.philips.com/xitaniumsr for more information.

Simplified Luminaire Design

Separate components add unnecessary complexity to luminaires (top), while Xitanium SR LED Drivers integrate many of the components (bottom) for a streamlined luminaire design.

For more driver information, visit www.philips.com/leddrivers or contact your local Philips sales representative.

A perfect partner for indoor lighting

Philips Advance Xitanium Indoor Linear LED Drivers

Philips Advance Xitanium LED Drivers for linear applications are available in three types:

Dimmable

Dimmable drivers include 0-10V, step-dim or leading-edge dimming to integrate into common dimming systems used in commercial applications. Dimming enables maximum energy savings and can help to facilitate worker comfort.

Programmable

These drivers provide a feature set managed through a programmable interface. This allows the OEM to create a fixture portfolio to meet specific needs for a wide range of applications, using a minimum number SKUs to reduce complexity and simplify logistics.

SR

Xitanium SR drivers share the same footprint as the dimmable drivers for simple, hassle-free integration into luminaires. These versatile drivers provide power metering and DC power to the sensor over the DALI 2.0 open standard digital interface.

Philips Advance Xitanium LED Drivers for linear applications are available in wattages up to 95W for hard-wired integration into linear fluorescent style fixtures (troffers). The form factor is perfectly suited to these applications and enables quick time to market by utilizing mechanical aspects familiar in traditional fluorescent fixtures. Go to www.philips.com/leddrivers for more information.

Simplicity for everyone

- Adjustable output current
- Wide operating windows
- UL Class Class 2
- Input voltage range of 120-277V
- High efficiency for maximum payback
- High reliability for low maintenance costs

Applications include:

- Office
- Retail
- Hospitality
- Meeting rooms

Reliable, flexible options

Philips Advance Xitanium Indoor Downlight and Track LED Drivers

Philips Advance Xitanium LED Drivers for indoor downlight and track applications are available in three types:

Fixed output

Fixed output LED drivers set the standard for reliability and performance needed for indoor downlight and track lighting.

Dimmable

Dimmable drivers include 0-10V or leading/trailing-edge dimming to integrate into common dimming systems used in commercial applications. Dimming enables maximum energy savings and can help to facilitate worker comfort.

Programmable

These drivers offer a feature set managed through a programmable interface. This allows the OEM to create a fixture portfolio to meet specific needs for a wide range of applications, using a minimum number of SKUs to reduce complexity and simplify logistics.

Philips Advance Xitanium LED Drivers for indoor downlight and track applications are available in wattages up to 95W for hard-wired integration into recessed downlights and track light fixtures. These LED drivers are available in the familiar SmartMate housing for junction-box mounting in downlights and slim housings for incorporation into track housings. Go to www.philips.com/leddrivers for more information.

Simplicity for everyone

- Adjustable output current
- Wide operating windows
- UL Class Class 2
- Input voltage range of 120-277V
- High efficiency for maximum payback
- High reliability for low maintenance costs

Applications include:

- Office
- Retail
- Hospitality
- Meeting rooms

For more driver information, visit www.philips.com/leddrivers or contact your local Philips sales representative.

The right solution for outdoor applications

Philips Advance Xitanium Outdoor LED Drivers

Xitanium LED Drivers for outdoor applications are available in three types:

Fixed output

Fixed output LED drivers set the standard for reliability and performance needed for outdoor lighting.

Dimmable

These 0-10V dimming drivers help address the growing demand for controllability and flexibility allowing the lighting system to be used with various controls to maximize energy savings.

Programmable

Programmable LED drivers provide a feature set managed through a programmable interface. This allows the OEM to create a fixture portfolio to meet specific needs for a wide range of applications, using a minimum number SKUs to reduce complexity and simplify logistics.

Philips Advance Xitanium LED Drivers for outdoor applications are available in wattages up to 300W for hard-wired integration into outdoor luminaires for the most rugged applications. They operate to specification under wide temperature and electrical ranges to ensure reliability. Go to www.philips.com/leddrivers for more information.

Specific features of this series

- Standard drive currents 350, 530, 700, 1050 and 1500mA
- UL Class 1 or Class 2
- Input voltage ranges of 120-277V or 347-480V
- Surge protection
- High efficiency for maximum payback
- High reliability for low maintenance costs

Applications include:

- Area
- Roadway
- Parking garage
- Gas station canopy
- Wallpacks
- Floodlights

Design flexibility

The Philips LED Module Family – Fortimo and InteGrade

The Philips LED Module Family – Fortimo and InteGrade – offers exceptional quality of light and energy efficiency. The broad module portfolio covers linear, point and display lighting applications and features modules designed to work with Philips Advance Xitanium LED Drivers.

Module Types

Linear modules

Flexible, versatile Fortimo LED modules provide easy design-in for manufacturers seeking to integrate reliable, high-quality components into their luminaires. The Fortimo LED Linear Module Family has been designed to replace fluorescent lighting in new luminaires. By standardizing form factors, Philips has made it easy for designers to fit LED solutions into a variety of linear applications.

Point modules

LED technologies continue to shift the lighting paradigm across all applications, and downlighting is no exception. In fact, downlighting was one of the first lighting applications to commercially embrace LED technology. Fortimo LED Downlight Modules (DLM) and LED Spotlight Module (SLM) provide the latest high quality LED options to satisfy both functions and performance requirements.

Display modules

The Philips InteGrade LED system is an energy efficient way to create an enjoyable shopping experience for customers. The system can be used for display case and linear accent lighting. InteGrade engine and fixture systems are available.

Ideal solution for high-performance linear LED luminaires

Fortimo LED Linear Family

The Fortimo LED Linear Module Family has been designed to replace fluorescent lighting in new luminaires. By standardizing form factors, Philips has made it easy for designers to fit LED solutions into a variety of linear applications, including standard office to high-bay industrial and now into very slim fixtures where fluorescent light might not be suitable.

Fortimo LED Line

Designed to replace general fluorescent lighting in new luminaires, the Fortimo LED Line system goes into the third generation with improved efficiency and the same Zhaga footprint.

Fortimo LED Line High Flux

The Fortimo LED Line High Flux system is ideal for installations at greater application heights where more light output is needed, such as high-bay. It was designed to withstand high ambient temperatures that are common to applications like industry or vapor tight fixtures.

Fortimo LED Strip

The Fortimo LED Strip system enables design of high-energy efficacy slim linear LED fixtures, which may not be possible with fluorescent lighting or the Fortimo LED Line system.

Fortimo LML Slim Efficiency

The Fortimo LML Slim Efficiency system enables an economic fixture design that meets DLC requirements for linear lighting applications replacing T8 lamp equivalents.

Fortimo LED Line SQ system

The Fortimo LED Line SQ system with square outer dimensions is ideal for 2"x2" or 2"x4" recessed office applications that require a very homogeneous (no pixilation) exit surface window and high quality of light.

For more driver information, visit www.philips.com/ledmodulesna or contact your local Philips sales representative.

High-quality options for downlighting applications

Fortimo LED Point Family

Fortimo LED Downlight Module (DLM)

LED technologies continue to shift the lighting paradigm across all applications, and downlighting is no exception. In fact, downlighting was one of the first lighting applications to commercially embrace LED technology. As the technologies continue to evolve, long lifetimes, environmental sustainability and low initial costs attract general commercial audiences requiring functional lighting, while the exponential rise in LED efficiency, light quality and light output are creating new opportunities for high-end, sophisticated applications. The challenge remains for luminaire manufacturers to leverage these valuable advancements with costly and time-consuming retooling while also satisfying functional and performance end user lighting needs.

New Philips Fortimo LED Downlight Module (DLM) and Fortimo LED Downlight Module (DLM) Flex systems now provide you with the latest high quality LED options to satisfy both functional and performance requirements, along with excellent energy efficiencies and color consistency. Best of all, we retained the same familiar DLM footprint so that you don't have to endure the hassles of retooling or redesigning fixtures.

Fortimo LED Spotlight Module (SLM)

The Fortimo LED SLM is a next generation solution for spotlight and downlight applications. Fortimo LED SLM is a product in line with the Fortimo brand promise of light quality. Philips provides a system proposition ranging from 1,100 lm to 4,500 lm in preset outputs, with the flexibility to tune as needed. The product leverages the latest chip-on-board LED technology with a Zhaga Book 3 compliant holder. Being a low voltage UL Class II electrical design and a UL recognized component, Fortimo LED SLM enables easy design-in with Philips Advance Xitanium LED Drivers.

Perfect design partner for display lighting

Philips InteGrade LED Engine and Fixture Systems

Philips InteGrade LED Engine System

The InteGrade LED engine system is an energy-efficient way to create an enjoyable shopping experience for customers. The system can be used for display case and linear accent lighting. With the dedicated InteGrade connectors it is easy to create longer lightlines. Thanks to the system's compact dimensions, it can be aesthetically integrated into the store interior.

The unique asymmetrical optics direct the light to where you want it, thus making optimum use of the light and energy. The products or background you want lit will be presented uniformly, while reducing glare and dark spots. Our LEDs have minimal output degradation and color shift, so the light remains consistent throughout their long service life. InteGrade LED is, quite simply, an ideal solution for high-quality lighting without flicker or color differences. Mounting accessories, cables and LED power driver are available separately.

Benefits for the end users

- Energy savings of up to 65%¹
- Superb asymmetrical optics
- InteGrade cabling allows connection to own connector system
- InteGrade LED system in combination with Philips cables and Philips Advance Xitanium power driver and dimming protocols

Applications include:

- Display case lighting:
 - Retail (refrigerated and ambient temperature)
 - Hospitality

Philips InteGrade LED Fixture System

The InteGrade LED fixture system is a pre-assembled fixture in 34" and 46". The fixture consists of a profile and InteGrade engines (combination of 6" & 23" module) and inline locks.

Benefits for the end users

- Energy savings of up to 65%¹
- Superb asymmetrical optics
- InteGrade cabling allows connection to own connector system
- InteGrade LED system in combination with Philips cables and Philips Advance LED power driver

Applications include:

- Display case lighting:
 - Retail (refrigerated and ambient temperature)
 - Hospitality

For more driver information, visit www.philips.com/ledmodulesna or contact your local Philips sales representative.

1. When comparing energy consumption of two InteGrade engine value 575mm (23") 830 with a Philips 28W T5 lamp (28W).

Note: Refer to page 9-7 to 9-16 for Ballast Specifications.

Fluorescent Ballasts - Electronic - Centium

Electronics Ballasts for T5, T8, T12 and Long Twin Tube Fluorescent Lamps

Reliable and robust, this broad line of Centium high frequency electronic ballasts for T5, T5HO, T8 and T12 fluorescent lamps offers all of the necessary commercial grade specifications plus the added benefits of lamp striation reduction technology making these ballasts compatible with energy saving T8 lamps. This provides your customers with a better energy saving solution than when using standard T8 ballast.

Our Centium ballasts are an optimal choice for a broad range of new construction and retrofit applications within the commercial sector, including general office lighting, conference, meeting and board room applications, indirect and decorative lighting and new fixture designs requiring smaller ballasts.

Fluorescent Ballasts - Electronic - Optanium

High-efficiency electronic ballasts for a broad range of T5 and T8 lamps

Optanium ballasts for T5 and T8 lamps are part of our effort to promote environmental responsibility through energy efficient products, lighting systems, services and expertise through Philips Advance branded products. These ballasts are part of an overall high-efficiency lighting system that can help you achieve LEED certification, meet ASHRAE standards and become compliant with California Title 24 Energy Efficiency Standards or any other local energy code applicable to you or your customers.

Optanium ballasts will help you and your customers meet a variety of application challenges, including luminaire design, installation, maintenance and evolving lamp technology. Optanium ballasts are available in standard light output, low-watt and high light output designs. Also these ballasts come in options with cold-starting capability down to -20°F (with standard fluorescent lamps). These two features combined make them ideal for just about any T5 or T8 fixture design and application. These ballasts are available in either instant start or programmed start ignition for extended lamp life in frequent switching applications such as those where occupancy sensors or motion detectors are being used. Optanium ballasts are also available in program start with parallel wiring.

Striation-reduction technology

Reduces the likelihood of striation often associated with energy-saving lamps for consistent light output

Cold temperature lamp ignition down to -20°F for instant or program start ballasts

Brings energy-efficient T5 and T8 performance to a variety of new applications such as parking garages, warehouses and cold storage areas

Arc-reduction technology — UL Type CC

UL Type CC* (on certain ballasts)

Program Start Parallel (PSP)

Program start ballasts with parallel wiring deliver independent lamp operation preventing premature lamp shut down ultimately reducing maintenance

High efficiency design

Helps maximize energy savings with improved ballast efficiency

* When operating standard non-energy saving lamps

Fluorescent Ballasts - Electronic - SmartMate

Electronic Ballasts for 4-Pin Compact Fluorescent Lamps

Offering maximum versatility, the Philips Advance family of SmartMate electronic ballasts for 4-pin compact fluorescent lamps drive a broad range of quad and triple-tube, circline, 2D and long twin-tube lamps. Representing an innovative breakthrough in CFL ballast technology, SmartMate ballasts' energy-efficient design, compact and lightweight housing and user-friendly features make SmartMate ballasts an ideal choice for fixture manufacturers, retrofitters and MRO replacement.

SmartMate ballasts are ideal in such applications as restaurants, reception areas, conference and meeting rooms, hotel and convention center ballrooms and houses of worship, as well as in place of incandescent downlighting systems.

We also offer our distribution partners a way to eliminate the need to stock loose components with SmartMate Ballast Replacement Kits.

Conveniently packaged, these kits come complete with a Philips Advance SmartMate ballast, a mounting plate adaptor, lead wire and a wire extraction tool for the ultimate in ease and versatility. See page 3-21 for details on kits.

Dual-entry connector

Reduces SKU requirements and inventory costs, as unit can be used with side or bottom exit leads

Color-coded, poke-in terminals

Enhances wiring accuracy and ease of assembly/installation

Operation between 42kHz and 52kHz

Eliminates interference with infrared systems, anti-theft devices or other electronic equipment

Lamp End-of-Life Protection Circuit

Removes power to lamps upon lamp failure

Fluorescent Ballasts - Electronic - AmbiStar

Residential Ballasts for 4-pin CFL, T8 or T12 Lamps

Today's fixed and dimmable fluorescent fixtures offer greater flexibility and energy savings for residential and hospitality settings than ever before, thanks to Philips Advance AmbiStar electronic ballasts. No matter what type of fluorescent lighting you're considering, these ballasts help create warm, inviting interiors while providing Class B FCC EMI Rating – a requirement for the ENERGY STAR Luminaires Specification.

AmbiStar ballasts feature sleek, compact designs to fit in today's stylish fixtures. AmbiStar ballasts deliver quiet, flicker-free performance, which makes them perfect for any residential or hospitality setting.

Class B FCC EMI Rating

Requirement for ENERGY STAR Luminaires Specification for fixtures

Title 24 Energy Efficiency Requirements

Enables California's Title 24 Residential Lighting Energy Efficiency standards with applicable luminaire design

Electronic circuitry

Enable ballast to run cooler and operate quieter than many magnetic ballast alternatives

Fast start times

Flicker-free ignition starts in less than 1.0 seconds, meeting EPA ENERGY STAR Requirements for Residential Lighting Fixtures

Fluorescent Ballasts - Electronic - signPRO

Electronic Sign Ballasts for T8/HO and T12/HO High Output (800mA) Lamps

Philips Advance signPRO line, a brand synonymous with full-line, high-quality sign ballasts offered exclusively to the sign industry to support the market's broad range of sign applications, now add signPRO Electronic Fluorescent Sign Ballasts.

These ballasts support over 200 different fluorescent lamp combination from the convenience of just four energy-efficient and easy-to-use models.

Microprocessor-controlled design

Enables one ballast to operate multiple lamps

IntelliVolt multiple-voltage technology enables operation from 120 to 277V, 50/60Hz

Enhances accuracy of ordering and reduces SKU requirements

Lamp End-of-Life Protection Circuit

Removes power to lamps upon lamp failure

Auto-Restart

Eliminates the need to reset power mains after lamp replacement

Instant-Start, parallel lamp operation

Designed so that if one lamp fails, other lamps remain lit

Fluorescent Ballasts - Electronic - PureVOLT

Electronic Ballasts for High Output (HO) Germicidal Ultraviolet (UV) Lamps

In support of the growing popularity of High Output (HO) germicidal UV-C lamps – which have been effective at improving indoor air quality in low temperature environments such as HVAC systems – Philips Advance PureVOLT electronic UV ballast is specially designed to operate a variety of 800mA HO UV lamps. PureVOLT is ideal in such applications as hospitals, food processing facilities, schools, office buildings, recreational facilities and residences.

Microprocessor-controlled design

Enables one UV ballast to operate multiple lamps

IntelliVolt multiple-voltage technology enables operation from 120 to 277V, 50/60 Hz

Enhances accuracy of ordering and reduces SKU requirements

Lamp End-of-Life Protection Circuit

Removes power to the lamp upon lamp failure

Auto-restart

Eliminates the need to reset power mains after lamp replacement

Programmed-start technology

Provides extended lamp life in frequent switching applications

Electronic Ballast Fundamentals

The Job of a Ballast

In all fluorescent lighting systems, the ballast's basic tasks include:

- Providing the proper voltage to establish an arc between the two electrodes.
- Regulating the electric current flowing through the lamp to stabilize light output.

In some fluorescent lighting systems, the ballast also provides a controlled amount of electrical energy to preheat or maintain the temperature of the lamp electrodes at levels specified by the manufacturer. This is required to prevent electrode filaments deteriorating prematurely and shortening the lamp life.

Starting Methods

For many years there were only three types of lighting systems: preheat, rapid start and slimline instant start. With the introduction of electronic ballasts, two additional types of lighting system circuits have been added: instant start and programmed start for T8 lamps. Each requires a special ballast design to operate the lamps in the circuit properly.

Instant start electronic ballasts start lamps without delay (<0.1 second) or flicker by providing a starting voltage that is sufficiently high to start a discharge through the lamps without the need for heating lamp electrodes. For F32T8 systems, the starting voltage is about 600V. The elimination of electrode heating helps maximize energy savings — typically saving 2W per lamp compared to rapid start ballasts¹. Instant start ballasts are best suited for applications with limited switches each day. Lamps operated by instant start ballasts typically operate 10,000 to 15,000 switch cycles before failure.

Rapid start electronic ballasts start lamps quickly (0.5 – 1.0 second) without flicker by heating the lamp electrodes and simultaneously applying a starting voltage. The starting voltage of about 500V for F32T8 systems is sufficient to start a discharge through the lamps when the electrodes have reached an adequate temperature. Electrode heating continues during operation and typically consumes 2W per lamp. Lamps operated by rapid start ballasts typically operate 15,000 to 20,000 switch cycles before failure.

Programmed start electronic ballasts also start lamps quickly (1.0 -1.5 seconds) without flicker. Programmed start ballasts are designed to maximize lamp life in frequent lamp starting applications such as in areas where occupancy sensor controls are used. Programmed start electronic ballasts precisely heat the lamp electrodes, tightly controlling the preheat duration before applying the starting voltage. This enhancement over rapid start ballasts helps minimize electrode stress and depletion of emitter material, thereby maximizing lamp life. Lamps operated by programmed start ballasts typically operate up to 100,000 switch cycles before failure.

Circuits

Series vs. Parallel. Lighting systems are typically wired in a series or parallel circuit. When a ballast is operating multiple lamps in a series circuit, if one lamp fails, the circuit is opened and all the lamps will extinguish. When a ballast operates multiple lamps in a parallel circuit, the lamps operate independently of each other so, if one lamp fails, the others can keep operating as the circuit between them and the ballast remains unbroken.

The Language of Ballasts

Input Voltage (dedicated vs. multi). Most ballasts are designed to operate at specific voltages. Newer electronic ballasts, including Philips Advance models that use IntelliVolt technology, offer much greater flexibility and other advantages such as inventory reduction. Today's increasing demands on electrical utilities can cause wide voltage variations during load demand changes, which in turn cause light output from lamps operated on dedicated electronic and electromagnetic ballasts to vary with the input voltage changes. With IntelliVolt technology, many Philips Advance ballasts maintain constant light output through nominal input voltage ranges of 120 to 277 volts, thereby compensating for any change in input voltage. Some ballasts operate from 277 to 480 volts or 347 to 480 volts.

Input Watts/ANSI Watts. Input watts published by ballast manufacturers are the total watts consumed by both the ballast and the lamps it operates. ANSI watts are the rating given for a ballast measured under the strict testing procedures specified by ANSI standards and are a dependable measure of this lamp/ballast performance. Energy savings can be determined by comparing the input watts of different lighting systems.

Input watts may be affected by tolerance build-up from the ballast, lamp, input voltage and ambient temperature. The input watts published in this catalog are for nominal conditions only.

Ballast Factor (BF) is the ratio of light output from a lamp operated on a commercial ballast to the light output of that same lamp operated on a "reference ballast" as specified by ANSI standards. Light output ratings published by lamp manufacturers are based on this "reference ballast."

$$BF = \frac{\text{light output of lamp operated on commercial ballast}}{\text{light output of lamp operated on reference ballast}}$$

Ballast Efficacy Factor (BEF) is the ratio of ballast factor to input watts. This measurement is generally used to compare the efficiency of various lighting systems — higher numbers being more efficient.

$$\text{Ballast Efficacy Factor} = \frac{\text{Ballast Factor} \times 100}{\text{Input Watts}}$$

This comparison is only valid, however, for ballasts operating the same number and type of lamps. In order to compare different types of lighting systems, the lumen output of the lamps must also be used.

Ballast Luminous Efficiency (BLE) is the ratio of total lamp arc power to input watts. This metric, new in 2014, is based solely on electrical measurements.

$$BLE = \frac{\text{Total Lamp Arc Power}}{\text{Input Watts}}$$

See footnote on page 3-69.

Power Factor (PF) is the measurement of how effectively a ballast converts the voltage and current supplied by the power source into watts of usable power delivered to the ballast and lamps. Perfect power utilization would result in a power factor of one.

$$PF = \frac{\text{Input Watts}}{\text{Input Current} \times \text{Input Voltage}}$$

A ballast's power factor may be classified under any one of the following categories:

High Power Factor (HPF)	0.90 or greater
Power Factor Corrected (PFC)	0.80 to 0.89
Normal (Low) Power Factor (NPF)	0.79 or less

Power factor measurements pertain only to the effective use of power supplied to the ballast. They are not an indication of the ballast's ability to supply light through the lamps. Because low power factor ballasts require about twice the current needed by high power factor ballasts, they allow fewer fixtures per circuit and create added wiring costs. High power factor ballasts are generally specified for all commercial lighting applications.

EMI/RFI. Because they operate at high frequency, electronic ballasts may produce electromagnetic interference (EMI) or radio frequency interference (RFI). RFI frequencies are a subset of EMI frequencies. EMI issues cover all possible operating frequencies while RFI is only concerned with radio and television frequencies. This interference could affect the operation of sensitive electrical equipment, such as radios, televisions or medical equipment. All Philips Advance electronic ballasts incorporate features necessary to afford maximum protection for the operating environment and operate well within regulatory limits.

Ballast Noise. The slight "humming" sound associated with fluorescent lighting systems results from vibration caused by the inherent electromagnetic action in the core-and-coil assembly of the ballasts. All electromagnetic and some electronic ballasts make this sound. Ballasts are assigned a sound rating, "A" through "F", based on the amount of sound produced, with "A" being the quietest. Generally, the larger the lamp and ballast, the higher the sound level and the sound rating will be. Because electronic ballasts have smaller components, they have the lowest sound rating. Some electronic ballasts make almost no sound. There is no ANSI standard for this rating, and it is left up to the manufacturer to rate their ballasts.

Inrush Current. All electrical devices including ballasts have an initial current surge that is greater than their steady-state operating current. A standard published by the National Electrical Manufacturers Association (NEMA) — NEMA 410 — Performance Testing for Lighting Controls and Switching Devices with Electronic Fluorescent Ballasts — covers worst-case ballast inrush currents. All circuit breakers and light switches are designed for inrush currents. The electrical system should be designed with this issue in mind.

Total Harmonic Distortion (THD). Harmonic distortion occurs when the wave-shape of current or voltage varies from a pure sine wave. Except for a simple resistor, all electronic devices, including electromagnetic and electronic ballasts, contribute to power-line distortion. For ballasts, THD is generally considered the percent of harmonic current the ballast adds to the power distribution system. The ANSI standard for electronic ballasts specifies a maximum THD of 32% for commercial applications. However, most electric utilities now require that the THD of electronic ballasts be 20% or less. Almost all Philips Advance electronic ballasts are rated for either less than 20% THD or less than 10% THD.

 Indicates ballast is listed with Underwriters Laboratories, Inc. and complies with UL935 Standard for Fluorescent Lamp Ballasts (File No. E14927).

Visit www.ul.com to find a current listing of Philips Advance ballasts under File No. E14927.

 Indicates ballast is certified by Canadian Standards Association and complies with CSA C22.2 No. 74 Standard for Fluorescent Lamp Ballasts (File No. 007310).

Visit www.csa-international.org to find current listing of Philips Advance ballasts under File No. 007310.

Normal Input Voltage	Catalog Number Prefix Code	Label Color Coding
120V	R	Yellow
277V	V	Red
347V	G	Grey
120V to 277V	I	Blue
347V to 480V	H	Purple

 Indicates ballast complies with directive 2002/95/EC Restriction of Hazardous Substances.

Total Harmonic Current

Non-Dimming Applications

When selecting a ballast for a lighting application, the Total Harmonic Current (THC) rating of the ballast is more significant than Total Harmonic Distortion (THD). This is because the absolute value of harmonic current, not the percentage, affects the electrical power distribution system. As can be seen in the table below, the THC rating of our Standard 2-lamp electronic T8 lamp ballast (REL-2P32-SC) is well below that of both the conventional (RQM-2S40-TP) and energy-saving magnetic T12 lamp ballasts (R-2S40-TP) it replaces. Moreover, the THC rating of our Centium electronic ballast is even lower.

Dimming Applications

Mark 70-10V and ROVR

Traditional low voltage controlled ballasts and ROVR typically produce less than 10% THD at full light output and less than 20% THD throughout the entire dimming range but require extra wires for the control circuit. THC is lower than that of the conventional or energy-saving magnetic system.

Mark 10 Powerline

Mark 10 *Powerline* electronic dimming ballasts are controlled by 2-wire modified powerline phase-cut style line voltage dimmers. Whenever the ballast is dimmed, the input voltage is cut or “chopped,” causing the THD to increase and the Power Factor to decrease.

Mark 10 *Powerline* electronic dimming systems (ballast and controller) have similar THD and Power Factor levels as the

conventional lighting systems they replace. Since a much smaller load is required by the Mark 10 *Powerline* electronic dimming system to achieve the same illumination level as a magnetic ballast system (20-30% less), the total input current will be considerably less. As a result, the magnitude of the total harmonic current will be less.

For example, a typical Mark 10 *Powerline* electronic ballast and dimmer control might draw a line current of 0.58A at 15% THD at full light output. If the light level is reduced to 5% of the maximum, the input power is decreased to 0.19A at 95% THD. While the THD level may seem high at the 5% maximum light output setting, the total harmonic current is still lower (0.13A) than the conventional T12 magnetic system (0.20A). Moreover, the overall heating effect on the wires and the distribution transformer is not higher than the existing conventional or energy saving T12 magnetic systems.¹

Conclusions

A simple ballast retrofit to electronic ballasts should not cause harmonic problems if none existed before the retrofit. Also, in new fixture applications, total harmonic distortion should not be a concern when specifying electronic ballasts. Finally, it is important to remember that electronic ballasts are not the greatest source of THD in an electrical distribution system. Other electronic devices such as computers, laser printers and other electronic equipment can draw current with more than 100% THD in some cases.

Table 1: Comparison of THD and THC Levels

Philips Advance Part No.	Ballast Type	Light Output Setting	Lamp Type	Input Current	% THD	THC ²
RQM-2S40-TP	Conventional Magnetic	100% (Ballast Factor is 0.98)	(2) F40T12	0.84A	<25%	0.20A
R2S40-TP	Energy Saving Magnetic	100% (Ballast Factor is 0.95)	(2) F34T12	0.63A	<20%	0.12A
REL-2P32-SC	Standard Electronic	100% (Ballast Factor is 0.88)	(2) F32T8	0.49A	<20%	0.10A
ICN-2P32-N	Centium Electronic	100% (Ballast Factor is 0.88)	(2) F32T8	0.49A	<10%	0.05A
IZT-2S32-SC + Dimming Control	Mark 70-10V Electronic	100% (Ballast Factor is 1.0)	(2) F32T8	0.57A	<10%	0.05A
IZT-2S32-SC + Dimming Control	Mark 70-10V Electronic	5% (Ballast Factor is 0.05)	(2) F32T8	0.12A	<20%	0.02A
REZ-2S32-SC (Ballast Only)	Mark 10 Powerline Electronic	100% (Ballast Factor is 1.0)	(2) F32T8	0.58A	<10%	0.06A
REZ-2S32-SC + Dimming Control	Mark 10 Powerline Ballast + Dimmer	100% (Ballast Factor is 1.0)	(2) F32T8	0.58A	<15%	0.09A
REZ-2S32-SC + Dimming Control	Mark 10 Powerline Ballast + Dimmer	5% (Ballast Factor is 0.05)	(2) F32T8	0.19A	<95%	0.13A

¹ For a more technical study comparing the a Mark 10 *Powerline* electronic dimming system to an energy saving magnetic system that it replaces, see the article Total Harmonic Distortion in Philips Advance Mark 10 *Powerline* Electronic Dimming Systems by O.C. Morse.

² The Total Harmonic Current (THC) of a ballast is calculated by the following equation: An approximation of THC may be obtained by simply multiplying the ballast input current by %THD.

$$\frac{\text{Ballast Input Current}}{\text{Square Root of } (1 + 1/\text{THD}^2)}$$

Ballast Life

Philips Advance fluorescent electronic and magnetic ballasts are designed and manufactured to engineering standards correlating to an average life expectancy of 50,000 hours of operation at maximum rated case temperature². Since Philips Advance ballasts operate below their maximum case temperature in the majority of applications, increased ballast life can be expected. As a rule of thumb, ballast life may be doubled for every 10°C reduction in ballast case operating temperature. However, there are many variables, such as input voltage, ambient temperature, etc., that affect ballast operating temperatures and therefore ballast life.

Lamp Operating Frequency

Electromagnetic ballasts and the lamps connected to them operate at an input voltage frequency of 60 Hertz (Hz), 60 cycles per second — which is the standard alternating voltage/current frequency provided in North America. Electronic ballasts, on the other hand, convert this 60 Hz input to operate lamps at much higher frequencies above 20 Kilohertz (kHz), 20,000 cycles per second. Philips Advance ballasts operate above 20 kHz but avoid certain ranges such as 30–40 kHz (infrared) and 54–62 kHz (theft deterrent systems) due to interference issues.

Because electronic ballasts function at high frequency, the fluorescent lighting systems that they operate can convert power to light more efficiently than systems operated by electromagnetic ballasts (see chart below). For example, lamps operated on electronic ballasts can produce over 10 percent more light than if operated on electromagnetic ballasts at the same power levels. In effect, today's electronic ballasts provide additional energy savings by matching the light output from electromagnetic ballasts while operating the lamps at lower power. This is the main reason why electronic ballast systems are more efficient than magnetic ballast system.

Crest Factor

Lamp manufacturers use crest factor to determine ballast performance as it relates to lamp life. Lamp Current Crest Factor is a measurement of current supplied by a ballast to start and operate the lamp. It is basically the ratio of peak current to RMS (average) current. High crest factor currents may cause the lamp electrodes to wear out faster, reducing lamp life. Crest factor requirements are regulated by ANSI (American National Standards Institute) standards and specified by lamp manufacturers. For rapid start and instant start T8 lamps the ratio is 1.7 maximum, and for instant start slimline lamps, it is 1.85 maximum.

Weight and Size Advantages

Since electronic components in electronic ballasts are smaller and lighter than the core-and-coil assembly in electromagnetic ballasts, electronic ballasts can weigh less than half as much as comparable electromagnetic models. Almost all Philips Advance electronic ballasts have a smaller cross-section than

electromagnetic ballasts but maintain the same mounting dimensions. This means that they can fit into all new fixture designs and can be easily retrofitted into existing fluorescent lighting systems.

Controllability

The ability of a building's occupants to control how they light their space is becoming an increasingly important factor for organizations in determining what real estate they will lease, buy or invest in. The ability to dim the lights or easily shut them off completely is a trend fueled not just by a desire to help the environment, but also by significant economic benefits. These benefits include greater energy efficiency — in terms of reduced HVAC costs as well as energy savings for lighting — more comfortable and productive working environments and compliance with ever tighter energy efficiency regulations. Philips Advance offers four families of electronic controllable ballasts — ROVR, Mark 7 0-10V, Mark 10 *Powerline* and *PowerSpec* HDF.

Compatibility With Powerline Carrier Systems

A powerline carrier system (PLC) uses electronic wiring devices to send information via a high frequency signal over the 120V or 277V electrical power distribution system of a building. For example, PLC systems are used in automatic clock systems (master time systems) to synchronize all of the clocks in a building or reset the time after a power outage. They eliminate the need for maintenance personnel to reset hundreds of clocks throughout a facility.

In a PLC system, a generator is used to impose a 1 to 4V high frequency signal on top of the existing voltage sine wave (60 Hz). This signal is generally in the 2500 to 9500Hz range, with some older systems operating at 19,500Hz or higher. Some electronic ballasts that are capacitive can absorb the signal from a PLC system. As a result, the signal becomes too weak to be “heard” by the receiver (like a timeclock) connected to the powerline.

Instant Start vs. Rapid Start Sockets for Dimming

When using dimming ballasts in fixtures, sockets must be of the Rapid Start type. Many fixtures with T-8 Instant Start electronic ballasts use jumpered or “shunted” Instant Start sockets. Controllable ballasts require two distinctly separate wires for each lamp socket. If you encounter shunted or jumpered sockets in a retrofit application, they must be removed and replaced with Rapid Start sockets.

Improper socket application will damage the ballast and void the ballast warranty. Refer to ballast wiring diagram for proper installation.

Fluorescent Lamp Burn-In

Today, most lamp manufacturers do not require the burn-in of linear fluorescent lamps prior to dimming in order to attain rated lamp life and stable electrical measurements. However, some manufacturers of compact fluorescent lamp sources do require a 100-hour burn-in prior to dimming. Consult your lamp manufacturer for their latest requirements.

See footnote on page 3-69.

Ordering Information

How to Order

Philips Lighting has developed the industry's broadest distribution system for electronic ballasts – more than 3000 stocking distributors nationwide. For information on the distributor best able to serve your needs, please call 800-372-3331.

Visit our web site at
www.philips.com/oemna.

- Plan your lighting installation carefully; consider using the services of a qualified lighting designer.
- Consult your local electric utility regarding demand side management rebate programs.
- Select the Philips Advance electronic ballast that best matches the requirements of your application. The technical specifications in this catalog (located on pages 9-7 to 9-16) will be useful in obtaining bids from electrical contractors.
- Contact your local Philips Lighting distributor. You will find them to be a helpful supplier of both products and information.

* Many current and all future electronic ballast part numbers will not use the "RH-TP" suffixes even though these ballasts will be thermally protected.
 ** Parallel Wiring Configuration. However, if one lamp fails, all other lamps in the circuit will extinguish.

Remote, Tandem or Through Wiring Distances

Remote Mounting of Electronic Ballasts

Unlike magnetic ballasts, electronic ballasts are limited in remote mounting distance from the lamps they operate. The factors limiting the distance from the electronic ballasts to the lamps are: open circuit voltage as opposed to operating voltage, operating frequency and the lamp operating current.

As the distance from the high frequency electronic ballasts to the lamp increases, so does the capacitance across the lead wire to the lamp. This increase in capacitance is important for two reasons. First, if the capacitance is too high, there will not be sufficient open circuit voltage across the lamp for proper lamp ignition.

Second, if the lamp is capable of ignition, the increased capacitance will cause a loss in the current to the lamp. The added capacitance creates what is known as a “shunt” around the lamp. In other words the current will leak from the red wire (or blue) to the yellow, completely bypassing the lamp. The current through the lamp will be reduced, resulting in lower lumens, with the possibility that the lamp will not be capable of sustained operation.

The Mark 7 0-10V, Mark 10 *Powerline* and ROVR dimming ballasts are particularly sensitive to high capacitance associated with long lead wires. The dimming ballast is capable of very low dim levels because constant filament heat is provided to the lamp. If there is any loss of current, the filament current will be reduced and the lamp will begin to flicker, or it will be completely extinguished. It is also important that the red and blue leads not be twisted together. Twisting the red and blue leads will add capacitance, causing the lamp to flicker at the lower dimming levels.

Open circuit voltage is a function of input voltage in some ballast designs, particularly for dedicated voltage ballasts. Cold temperature starting is a function of open circuit voltage. The lead length recommendations in the following table are for normal rated input voltages (120V, 277V, 347V) at 25°C ambient temperature.

In summary, there is a wide range and varying types of electronic ballast architectures that are capable of being remote mounted for an equally wide range of distances. If you are uncertain of the remote mounting restrictions for a particular electronic ballast please consult Philips Lighting Customer Care (Warranty/ Technical Service).

Remote Wiring

Note: Recommended output lead lengths and remote mounting distances should not be exceeded.

Tandem Wiring

2 BALLAST EXAMPLE

BALLAST 'A' OPERATES OUTBOARD LAMPS
 BALLAST 'B' OPERATES INBOARD LAMPS

(2) 3-lamp luminaires shown as an example, but this would also be applicable for any luminaire containing 2 lamps or more.

1 BALLAST EXAMPLE

Through Wiring

4 - LAMP BALLAST

3 - LAMP BALLAST

2 - LAMP BALLAST

Note: Ballast should be mounted at center of fixture to minimize lead lengths. Recommended output lead lengths and remote mounting distances (pages 3-15 to 3-19) should not be exceeded.

Diagrams are also applicable for multiple lamp cross-section luminaires. For example, an 8-foot luminaire with two lamps in cross section and a single 4-lamp ballast.

Philips Fluorescent Dimming Ballast Application Usage

- While installing a Philips fluorescent dimming ballast in a fixture, care should be taken that the output lead lengths do not exceed the specified maximum permissible limits. These limits are specified in the Remote, Tandem or Through Wiring Distance table on the next page.
- If excessive output lead lengths (outside the specification) are maintained for a Philips fluorescent dimming ballast the ballast may behave undesirably or abnormally at low dim levels.
- If output lead wire lengths are not specified for linear Philips fluorescent dimming ballasts, then it implies that the output lead length should not be extended any more than what was provided with the dimming ballast.
- For Philips CFL dimming ballasts, the output lead length between the ballast and the lamp socket should be maintained as short as possible. It is recommended that this lead length should not exceed 24".
- Before using a Philips fluorescent dimming ballast in remote mounting applications or for applications with emergency power supplies, please refer to the Remote, Tandem or Through Wiring Distance table on the next page and verify whether the ballast supports remote mounting application.
- If the Philips fluorescent dimming ballast supports remote mounting, then
 - For non-emergency application, the remote mounting distance should not exceed the specified limit.
 - For applications with emergency power supplies, the total output lead wire length measured from the fluorescent dimming ballast to the lamps sockets (including the emergency ballast wiring) should not exceed the specified limit of the Remote, Tandem or Through Wiring Distance table on the next page.
- If the Philips fluorescent dimming ballast does not support remote mounting, then
 - For non-emergency application, the output lead length should not be extended any further than what was provided with the dimming ballast.
 - For applications with emergency power supplies, the total output lead wire length measured from the dimming ballast to the lamp sockets (including the emergency ballast wiring) should not exceed the lead length that was provided with the fluorescent dimming ballast. If maintaining the lead lengths within the specification is not possible, then it is recommended to use a Philips fluorescent dimming ballast that supports remote mounting. The example in the next column can be used as a reference for an appropriate application usage of a Philips fluorescent dimming ballast.

Example:

A luminaire contains (1) IZT3PSP32SC Philips Mark 7 0-10V fluorescent dimming ballast and (1) emergency ballast in a three lamp, single lamp cross-section, 12' fixture. This application will have issues because of the excessive wire lengths that result in capacitive losses which may cause short lamp life, uneven lamp performance or even inability to ignite the lamp(s). In such an application it is preferred to use one of the following approaches:

- * One IZT2PSP32SC ballast to control two lamps (can be remote mounted up to 6') and one IZT132SC ballast in conjunction with the emergency ballast to control one lamp. The total output lead length measured from the dimming ballast to the lamps sockets (including the emergency ballast wiring) should be less than 6'.
 - * One IZT132SC ballast to control one lamp (can be remote mounted up to 6') and one IZT2PSP32SC ballast in conjunction with emergency ballast to control two lamps. The total output lead length measured from the dimming ballast to the lamps sockets (including the emergency ballast wiring) should be less than 6' (This approach will provide 2 lamps to be turned ON during emergency).
- For additional application support, contact technical support at Philips Lighting.

Notes

For nominal input voltage and 25°C ambient temperature.

Notes:

1. For Tandem or Through wiring, any lamp can be remote mounted.
2. For Tandem or Through wiring, BLUE lamp must be in same fixture as ballast.
3. For Tandem or Through wiring, RED lamp must be in same fixture as ballast.
4. No Tandem or Through wiring allowed.
5. No Remote, Tandem or Through wiring allowed.
6. For Tandem or Through wiring, RED lamp and BLUE lamp must be in same fixture as ballast.
7. For Tandem or Through wiring, RED lamp and YELLOW lamp must be in same fixture as ballast.
 - (a) Ballast can be Remote, Tandem or Through wired farther than 20'. Consult factory.
 - (b) Ballast can be Remote, Tandem or Through wired to a maximum 12 feet between ballast and lampholder for (2)F96T8/HO lamps or 20 feet for all other T8/HO lamps.
 - (c) Ballast can be Remote, Tandem or Through wired to a maximum 6 feet between ballast and lampholder for energy-saving lamps or 8 feet for standard lamps.
 - (d) For tandem wiring, lamp leads from multiple ballast cannot be run in same conduit. Separate conduit must be used for each ballast.
 - (e) Ballast can be Remote, Tandem or Through wired to a maximum of 20' for standard lamps and 6' for energy-saving lamps.
 - (f) Energy-saving lamps not allowed for Tandem wiring.

Use 18 AWG wire or larger.

DOE Legislation

The U.S. Department of Energy (DOE) issued an amended standard for fluorescent lamp ballasts which became effective on November 14, 2011. All covered fluorescent ballasts manufactured in or imported into the United States must comply. For more information on this amended standard, please visit https://www1.eere.energy.gov/buildings/appliance_standards/product.aspx/productid/62.

The amended standard covers fluorescent ballasts operating T12, T8, T5, T5HO and sign ballasts. This standard requires fluorescent ballasts to meet a minimum Ballast Luminous Efficiency (BLE) that is determined by the type of lamp operated and the arc power of the lamps. It is essentially a minimum efficiency standard based on lamp power compared to input watts.

The Circle-E logo is used to designate ballasts that comply with this new standard.

Reading Date Codes for Warranty Date on Electronic Ballasts

Most date codes are stamped on the back of the ballast (opposite the label side). The date code is part of a larger group of numbers and letters that call out the various codes for the factory where the ballast was manufactured. Depending upon which Philips Lighting factory manufactured the ballast, the date stamp can vary slightly in terms of its position on the ballast and the number sequence.

Some electronic ballasts manufactured from 1988 to 1991 may have the date code in ink stamped on the ballast label. Some ballasts have the manufacturing code printed in ink on the end of the ballast.

A typical date code for an electronic ballast will have the week and the year the ballast was manufactured. Some ballasts will have the day of the week included too.

Some examples of these different date codes that you may find are:

937N1B
B41893

The date code is the 18th week of 1993, stamped one line over the other.

937N1J
P23292

The date code is the 32nd week of 1992, stamped one line over the other.

16
93
973N20P3

The date code is the 16th week of 1993, stamped at the end of the ear on the back.

892P
259P
24
94

The date code is the 24th week of 1994, stamped on four separate lines.

91405BB0291N

The date code is the 2nd week of 1991, stamped on one line.

9716T032HD
120432IS24

The date code is the 16th week of 1997, stamped in ink on the end of the ballast.

693P0MMA
53301707

The date code is the 5th day, of the 33rd week of 2001, stamped on the back of the ballast.

The above examples are for ballasts that are already out of warranty. The next example is for ballasts that may still be covered under warranty. In 2006 the date code configuration was revised to this example.

06127M50
F2104571

The date code is the 127th day of 2006 stamped on the back of the ballast.

For assistance in determining a date code, call Customer Care (Technical Services /Warranty) at 1-800-372-3331.

SmartMate and Mark 10 Powerline Ballast Kits

Kit Contents and Key Features	Key Benefits
<p>SmartMate or Mark 10 Powerline ballast</p> <ul style="list-style-type: none"> • Intellivolt technology • Dual-entry color-coded connectors • Multi-lamp capability <p>Mounting Plate Adapter</p> <ul style="list-style-type: none"> • Multiple lead wire cutouts, including center hole • Integral mounting studs <p>Lead Wire</p> <ul style="list-style-type: none"> • Color-coded • Pre-stripped 3/8" on one end — 5/8" on the other <p>Wire Extraction Tool</p> <p>Individually Shrink-Wrapped Kits</p>	<p>Makes ballast selection and installation a breeze</p> <ul style="list-style-type: none"> • Provides full range input voltage from 120V to 277V • Adds to application versatility; simplifies wiring • Encompasses a wide variety of applications, including quads, triple tubes, circline, 2D and long twin-tube lamps <p>Takes the guess-work out of mounting</p> <ul style="list-style-type: none"> • Allows wiring and mounting to existing fixture's mounting plate • Eliminates need to stock units with and without studs <p>Allows installer to pre-wire</p> <ul style="list-style-type: none"> • Enables wiring accuracy • Meets UL poke-in connector requirements and facilitates final connection <p>Makes for quick disconnections if necessary</p>

- ICF-2S13-H1-LD-K REZ-2Q26-M2-LD-K
- ICF-2S18-H1-LD-K VEZ-2Q26-M2-LD-K
- ICF-2S26-H1-LD-K REZ-1T42-M2-LD-K
- ICF-2S42-M2-LD-K VEZ-1T42-M2-LD-K

Kits contain the standard ballasts.
For lamp and operational data consult
pages 3-22 through 3-28 and 4-5.

- Ideally suited for replacement of expired electronic ballasts, regardless of brand or mounting configuration.
- Dramatically simplifies the upgrading of incandescent fixtures to energy-saving CFL.
- Compatible with most J-Box covers

Note: When retrofitting with an instant start system to replace a rapid start system, some modifications to the socket wiring are necessary for optimal performance. This requires the two lamp pins to be shunted as close to the socket as possible. Do this by either installing shunted sockets or installing a jumper wire to tie the two lamp pins together in each socket. Failure to shunt the pins together will cause the lamps to fail prematurely.

T8/HO and T12/HO dimensions

Designation	Dimension (inches)				
	Length (L)	Width (W)	Height (H)	Mounting (M1)	Mounting (M2)

Fluorescent Ballasts - Electronic - Optanium Step-Dim

High efficiency electronic ballasts with step-dim capability for T5, T5HO and T8 fluorescent lamps.

Philips Advance Optanium ballasts with step-dim capability for T5 and T8 fluorescent lamps represent an affordable, energy-efficient and versatile lighting solution designed to help meet energy codes such as California's Title 24 and ASHRAE 90.1-2010 that require end users to reduce lighting power consumption by 50%.

Operating from any line voltage switching device, the ballast's programmed start circuitry provides extended lamp life in frequent switching applications like those associated with the use of occupancy sensors or motion detectors making this product the sustainable choice for many commercial applications. The ballast additionally features IntelliVolt multiple voltage technology as well as safety features, including auto restart, ballast shutdown mode, Type CC protection and T5 and T5HO lamp End-of-Life (EOL) protection circuitry, which safely removes power from the lamp upon failure to minimize maintenance concerns. Offering the flexibility of step-dimming with the high-efficiency of Optanium electronic ballast technology, our ballasts represent an optimal lighting solution for a wide variety of professional applications.

Reduce input power by 50% to help meet energy codes

- 50% control step

Dim all the lamps together providing equal burn hours on all lamps reducing uneven lifetimes as experienced with on-off switching systems

- Adjustable light levels — 100% power, 50% power, and off

Ensure ease of use and system compatibility across a broad range of applications

- Operation from any line voltage switching device (such as standard toggle switches and occupancy sensors)

For 14 - 35W T5* or 54W T5/HO Lamps

Fluorescent Ballasts - Dimming - Mark 10 Powerline

Mark 10 *Powerline* electronic dimming ballasts make converting your existing fixtures easy.

For companies looking to make their fixed-output linear T8, 4-pin CFL and T5/HO fluorescent systems more cost effective and sustainable, Mark 10 *Powerline* ballasts provide an easy solution without the need for additional control leads. Simply replace the ballast, replace the switch and dim the lights. That's all it takes.

It's that easy to bring the convenience and flexibility of fluorescent dimming to conference rooms, private offices, auditoriums, architectural cove lighting – anywhere dimming is required.

Input voltage to dimmer	Control Voltage to Ballast (from Dimmer)	
	Max Light Output	Min Light Output
120V	120V	56V
277V	277V	129V

Compatible with controls from numerous manufacturers without using separate control leads
Powerline dimming interface

Provide task appropriate comfort only where necessary to increase potential energy savings while supporting LEED performance standards
Full range continuous dimming (100% light output down to 5% – T5/HO to 1%)

Ideal for frequent switching applications such as occupancy sensors and daylight harvesting
Programmed start operation

For 18 - 70W T4 Lamps

Fluorescent Ballasts - Dimming - Mark 7 0-10V

0-10V electronic dimming ballasts provide maximum versatility with low voltage dimming.

The Mark 7 0-10V series of dimmable electronic ballasts offer maximum versatility by incorporating separate control leads for use with a wide array of controllers, including occupancy sensors, daylight harvesting controls, and building management systems from more than 40 manufacturers.

When paired with linear fluorescent and 4-pin compact fluorescent lamps, Mark 7 0-10V ballasts optimize the benefits of such popular sustainable lighting techniques as daylight harvesting, occupancy sensors, and load shedding to satisfy the need for an affordable, flexible and versatile controllable lighting solution.

Mark 7 0-10V Control Wiring (Grey and Violet)

Wire Size	Maximum Length (Ft.)
AWG-16	800
AWG-18	500
AWG-20	320

Provide task appropriate comfort only where necessary to increase potential energy savings while supporting LEED performance standards
Full range continuous dimming (100% light output down to 3% - T5/HO to 1%)

Help reduce maintenance costs as more lamps remain on when lamps reach end-of-life minimizing wasteful re-lamping
Independent light operation (4-Lamp)

Ideal for frequent switching applications such as occupancy sensors and daylight harvesting
Programmed start operation

Note: Easy way to test dimming functionality of 0-10V dimming ballasts is to 'short' together the violet and grey control wires. If the lamps go to full dim, then the ballast is dimming fine.

Fluorescent Ballasts - Dimming - ROVR

Digital addressable ballasts provide intelligent control through the DALI protocol.

Philips Advance ROVR ballasts reflect the latest approach to controlling fluorescent lighting. Rather than simply responding to instructions from control components, ROVR ballasts enable two-way communication and have the ability to dim and switch individual ballasts through the control signal.

These features allow for virtually unlimited design flexibility while creating sustainable lighting systems. This two-way communication is made possible through the industry-standard digital communication protocol known as DALI (Digital Addressable Lighting Interface).

This protocol allows ROVR ballasts to provide users with operational data while controlling the output of individual luminaires. This fully supports sustainable design principles such as daylight harvesting and occupancy sensors while enabling a proactive response to maintenance concerns.

Ideal for a variety of applications

Available in linear fluorescent and 4-pin compact fluorescent models

Provide task appropriate comfort only where necessary to increase potential energy savings while supporting LEED performance standards

Full range continuous dimming (100% light output down to 3% - T5/HO to 1%)

Ideal for frequent switching applications such as occupancy sensors and daylight harvesting

Programmed start operation

For 13 - 70W T4 Lamps

The listed manufacturers have indicated that they manufacture products that are compatible with the Philips Advance Mark 7 0-10V electronic dimming ballasts, Philips Advance Mark 10 *Powerline* electronic dimming ballasts, or Philips Advance ROVR digital addressable ballasts. Philips Lighting North America Corporation provides this list as a convenience to our customers and control manufacturers. Philips Lighting North America Corporation does not support or recommend one manufacturer over another. Please refer to each manufacturer's catalog for a complete product description and performance specifications.

Electromagnetic Fluorescent Ballasts

General ballast information	5-1
Radio interference filter	5-2
Very high output ballasts for linear fluorescent lamps	5-3
Preheat ballasts for linear fluorescent lamps	5-4
Trigger start ballasts for linear fluorescent lamps.....	5-6
Ballasts for circline lamps	5-7
Ballasts for compact fluorescent lamps	5-8

Supply Voltage and Frequency

Each ballast is designed to operate at the nominal voltage shown on the Philips Advance ballast label. Deviation from the applied voltage limits will result in damage to either the ballast or lamp or both. It is therefore necessary that the voltage applied to ballasts be maintained within the respective limits shown in the table below.

A ballast subjected to higher than nominal voltages will typically operate at increased temperatures. This will result in reduced ballast life. Low voltage can cause premature lamp failures as well as unreliable lamp starting.

All ballasts are designed for single frequency operation. Therefore, best results will be obtained when that ballast is used on the frequency shown on the ballast label. Frequency limitations are as follows:

Nominal	Frequency Limits
60HZ	57.5 to 62.5
50HZ	47.5 to 52.5

Prefix Code Letters	Normal Voltage	Applied Voltage Limits	Color Label Identification
H	120	112-127	Yellow
R	120	112-127	Yellow
L	120	112-127	Yellow
S	120	112-127	Yellow
X	220	210-230	Green
M	220/250	210-230 / 235-260	-
Y	240	225-250	Orange
V	277	255-290	Red
G	347	322-365	Gray

Safety

The National Electrical Code requires grounding of fluorescent fixtures. The fluorescent ballast case must be grounded either to the fluorescent fixture or, if remote mounted, by other means such as a wire from the ballast case to ground. Without proper fixture and ballast grounding, a shock hazard may exist due to the fluorescent fixture becoming energized by an internal ballast failure to case. Also, all ballasts have normal leakage current. When the ballast is properly grounded, the leakage current should not pose a problem.

Ballast Date Codes

Philips Advance electromagnetic fluorescent lamp ballasts are date stamped on the ballast cover to designate month and year of manufacture. The month is indicated first, followed by the year. In the example shown 0100, the manufacturing date is January 2000. In 2006 a new date stamp was implemented. The year is indicated first, followed by the calendar day of year and closes with an internal number (06 300 ###). For warranty information go to www.usa.lighting.philips.com/support/support/warranty.

Indicates ballast is listed with Underwriters Laboratories, Inc. and complies with UL935 Standard for Fluorescent -Lamp Ballasts (File No. E14927).

U.L. RECOGNIZED

Indicates ballast is component recognized with UL and complies with UL935 Standard for Fluorescent Lamp Ballasts (File No. E14927).

Visit www.ul.com to find a current listing of Philips Advance ballasts under File No. E14927.

Indicates ballast is certified by Canadian Standards Association and complies with CSA-22.2 File No. 74 for Fluorescent-Lamp Ballasts (File No. 007310). Visit www.csa-international.org to find a current listing of Philips Advance ballasts under File No. 007310.

Philips Advance fluorescent ballasts are designed and manufactured in accordance with the American National Standards Institute standard for fluorescent ballasts, ANSI C82.1.

Indicates ballast complies with directive 2002/95/EC Restriction of Hazardous Substances.

Starting

The metal of a fluorescent fixture is a starting aid when properly grounded. T12 fluorescent lamps rated at 40W or less used for rapid or trigger start operation must be mounted within 1/2" of a grounded metal surface. T8 lamps must be mounted within 3/4" of a grounded metal surface. All other lamps must be mounted within 1" of a grounded metal surface.

An important additional factor for proper lamps starting is polarity. The white ballast lead must be connected to the ground of the power supply (neutral) and the black lead to the hot line wire. A reversal of polarity may result in lamp damage or improper lamp starting.

Ballast Sound

The slight hum present in fluorescent lighting installations originates from the inherent magnetic action in the core and coil assembly of the ballasts. This hum may be amplified by the method of mounting the ballast in the fixture – the fixture design – and, more often than not, this hum is amplified by the resonant qualities of the ceiling, walls, floors and furniture. In planning a lighting installation, careful consideration must be given to the selection of the fluorescent lamp ballast, the lighting fixture and room components. These precautions will help to achieve the quietest installation possible.

The choice of fluorescent lamp ballast should be made on the basis of selecting the one rated quietest for a specific location or interior as some ballasts have a more discernable hum due to basic construction features and electrical ratings.

Sound Ratings

For Any Installation in:	Average Ambient Noise Level Of Interior	Sound Level Rating*
TV or Radio Station, Library, Reception or Reading Room, Church, School Study Hall	20-24 Decibels	A
Residence, Quiet Office, Night School Classroom	25-30 Decibels	B
General Office Area, Commercial Building, Storeroom	31-36 Decibels	C
Manufacturing Facility, Retail Store, Noisy Office	37-42 Decibels	D

*These sound ratings are based on measurements of Average Ambient noise levels during conditions of normal occupancy. Audible ballast hum may appear amplified during exceptionally quiet periods and at times when area is unoccupied.

Radio Interference Filter

Radio interference is caused by the action of the arc at the lamp electrodes, which creates a series of radio waves. This energy may interfere with radio reception by:

1. Direct radiation from the fluorescent lamp to the aerial circuit.
2. Line feedback from the lamp through the power line to the radio.
3. Direct radiation from the electrical supply line to the aerial circuit.

To correct the first cause, it is recommended the radio and aerial circuit be separated at least 10 feet from the fluorescent lamp and the radio provided with a positive ground.

The second and third causes can generally be corrected by the addition of an external capacitor-reactor filter. It is also desirable that the radio and fluorescent lamp fixture be provided a supply voltage from separate branch circuits.

Electronic HID Overview

Just as electronic ballast technology enhanced fluorescent lighting systems, electronic HID ballasts bring significant performance improvements to HID lighting systems, including:

- Higher efficiency
- Greater lumen maintenance
- Longer lamp life
- Enhanced color control

e-Vision

Low frequency electronic ballasts are recommended by lamp manufacturers to drive the latest generation of ceramic, low wattage metal halide lamps. These ceramic lamps have superior color rendition and can potentially maintain that color over the life of the lamps when properly operated with electronic ballasts. Since color is dependent on proper lamp wattage, the electronic ballast must be able to maintain lamp wattage precisely at its rated point throughout the rated average life of the lamp. Low frequency electronic HID ballasts, such as the Philips Advance e-Vision line, constantly measure and adjust the wattage, optimizing delivery of the ceramic lamps' superior color properties. This makes ceramic metal halide operated by e-Vision ballasts the premier choice for many applications previously illuminated by either tungsten halogen or incandescent sources, such as retail lighting.

Operational improvements are gained as greater efficiency and cooler running electronic ballasts lead to energy savings. In addition, ballasts run quieter, weigh less and have smaller footprints.

CosmoPolis

CosmoPolis presents a major step forward in outdoor lighting and was developed specifically to meet the challenges of the 21st century. The CosmoPolis system simplifies outdoor lighting with the combination of a compact lamp and an optimized, rugged electronic ballast system. Designed specifically for outdoor area and roadway lighting applications, these Xtreme ballasts have integral surge protection of 10kV/5kA, and 80,000 hours rated average life.* This highly efficient system provides end users the ability to convert to a warm white light without sacrificing color rendering or system lifetime.

MasterColor Elite Medium Wattage

The lamp's sparkling white light with 90 CRI creates a natural ambiance and brings out the best in all different types of colors. The high efficiency of the lamp and ballast together means reduced energy use and a lower cost of ownership compared to traditional 400W Metal Halide HID systems.** The e-Vision ballast comes with 0-10V control wires that allow for dimming to 50% of lamp power and allow for operation by 0-10V controls such as the Philips DynaDimmer. This system is ideal for indoor lighting in both high-bay and recessed applications, as well as outdoor lighting for street and area installations.

* Rated average life is based on 90% surviving when operating at 10°C less than the marked maximum case temperature (Tc - 10°C) with one switch per day. Rated average life is based on engineering testing in laboratory conditions and probability data as defined in IEC Norm 60929.

** Based on a comparison of published data of a Philips CDM EliteMW 315/T9/942/U/E lamp operated by Philips Advance IZTMH-210315-R-LF (341 System Watts) to a Philips MS400/BU/ED28/PS operated by a Philips Advance 71A6092AEE ballast (452 system Watts) operated for 30,000 hours (rated average life of 315W CDM Elite lamp).

[^] Philips 22W MiniMaster Color Lamp, ANSI C175/M175, with PGj5 base

⁺ Philips 39W MiniMaster Color Lamp, ANSI C179/M179, with PGj5 base

[‡] For CosmoPolis and MasterColor CDM Elite Medium Wattage, Intellivolt is limited to 208 thru 277V

e-Vision Low Frequency Electronic HID Ballasts

For Low Wattage HID Lamps

Key Features	Key Benefits
IntelliVolt • Operates on either 120 or 277V, or any voltage in between, 50 or 60Hz	• Fewer SKUs required in inventory • Broadens the range of applications
Smaller and lighter weight than magnetic HID F-Can ballasts	• Compact footprints • Provides greater design flexibility
Reduced input watts compared to magnetic systems	• Energy savings; lower cost of ownership
Low frequency lamp operation	• Prevents acoustic resonance in the lamp arc tube
Square wave output waveform	• Helps maximize lamp life
Lamp EOL detection; shuts down system at lamp end of life	• Enhanced safeguard
Thermally protected, internally fused and output short circuit protected	• Shuts system down upon abnormal failure or conditions
Lamp wattage regulation • Lamp wattage will change less than .5% with a +/-10% change in line voltage	Excellent light quality • Optimizes lamp color stability over time • Reduces lamp-to-lamp color variations both initially and during lamp life
Metallic enclosure	• Provides enhanced capability for high ambient temperatures by transferring heat away from sensitive internal components
1.0 Ballast Factor	• Lamp produces maximum light output over its rated average life

1. All ballasts are sound rated A and feature high power factor (>0.9), a ballast factor of 1.0 resettable thermal protection and a maximum Harmonic Distortion of 15%.
2. For IMH-39-K-LF, RMH-39-K-LF, RMH-20-K-LF and IMH-G20-K-LF input and output lead wires exit on opposite sides of ballast. For IMH-39-K-LFS, RMH-39-K-LFS, RMH-20-K-LFS and IMH-G20-K-LFS all lead wires exit the same side of the ballast.
3. Maximum case temperature should not be exceeded in the application, as life will be affected and the integral resettable thermal protector may activate. A lower maximum temperature rating does not imply lesser thermal performance and can be indicative of a cooler running ballast design. Consult factory for further application assistance.

* Ordering information:

- LF Side exit leads with mounting feet
- BLS Bottom exit leads with mounting studs

^x Use with any Self Heating Thermal Protector (Insulation Detector) having equivalent resistive value 5k to 25k ohm (4 wire versions only).

^Y Restrictions on Hazardous Substances (RoHS) is a European directive (2002/95/EC) designed to limit the content of 6 substances [lead, mercury, cadmium, hexavalent chromium, polybrominated biphenyls (PBB) and polybrominated diphenyl ethers (PBDE)] in electrical and electronic products.

Refer to page 6-3 for lead wire information.
 Refer to pages 6-10 to 6-11 for ballast dimensions.
 Refer to page 6-9 for wiring diagrams.

Fixed Output CosmoPolis Xtreme

With CosmoPolis, Philips presents a major step forward in urban outdoor lighting, developed specifically to meet the challenges you face in the 21st century. The CosmoPolis system simplifies outdoor lighting with the combination of a miniature lamp and an optimized electronic ballast system.

All CosmoPolis ballasts come standard with our Xtreme features of 80,000 hr lifetime¹ and integral 10kV/5kA surge protection.

Six Performance Features of the CosmoPolis System

1. Quality of Light
2. System Efficiency
3. Optical Efficiency
4. Dependable Service
5. Compact System
6. Sustainability RoHS Compliant

With CosmoPolis, the benefits you experience from using Philips outdoor HID lamps are more impressive than ever.

CosmoPolis is not a retrofit for existing lamps, but offers you impressive benefits for new or renewed installations.

Consider:

- CosmoWhite 45W instead of HPS 50W, QMH 70W.
- CosmoWhite 60W instead of HPS 70W, MV/QMH 100W.
- CosmoWhite 90W instead of HPS 100W, MV/QMH 175W.
- CosmoWhite 140W instead of HPS 150W, MV/QMH 250W.

Applications

- Outdoor: Architectural façade lighting, illumination of roads and pedestrian areas, public spaces and parking garages

¹ Lifetime is specified as 80,000 Hours with 10% failures at Tcase at 80°C.

MasterColor CDM Elite Medium Wattage

The Philips MasterColor Elite MW system offers a high level of light quality and performance. The lamp's sparkling white light creates a natural ambiance and brings out the best in all different types of colors. Additionally, the high efficiency of the lamp and ballast together means reduced energy use and a lower cost of ownership compared to a 250W or 400W metal halide HID system.**

High Efficiency

- Up to 120 lm/W (lamp) or 107 lm/W (system)
- 92% ballast efficacy

Light Quality

- Excellent color rendering of CRI 90+
- Crisp, white light in 3000K and 4200K CCT
- Stable color performance over the rated average life of the lamp
- New socket design enhances higher optical efficiency

Product Benefits

- Significant upgrade opportunity over traditional HID systems

- Viable alternative to fluorescent options
- Excellent color quality and consistent light output from beginning to end
- Being 50% smaller than traditional metal halide lamps gives freedom in optic and luminaire design
- Greater harmony in lighting design due to availability of Elite lamps in various wattages and two color temperatures
- Sparkling properties of white light create a more natural and inviting ambience
- High system energy efficacy: sound TCO
- Long average rated lamp life from 20,000 to 30,000 hours* for low maintenance cost
- True universal operation with no effect on life and color

Applications

- **Outdoor:** Architectural façade lighting, illumination of roads and pedestrian areas, public spaces and parking garages
- **Indoor:** High-bay retail, grocery stores, warehouses and manufacturing facilities

¹ Operates for a voltage range of 200-277V.
 * Rated average life is the life obtained, on average, from large representative groups of lamps in laboratory tests under controlled conditions at 10 or more operating hours per start. It is based on survival of at least 50% of the lamps, and allows for individual lamps or group of lamps to vary considerably from the average. CDM Elite MW 210/T12/930/O average rated life is 20,000 hours. CDM Elite MW 315/T9/942/U/E average rated life is 30,000 hours.

** Based on a comparison of published data of a Philips CDM EliteMW 315/T9/942/U/E lamp operated by Philips Advance IZTMH-210315-R-LF (341 System Watts) to a Philips MS400/BU/ED28/PS operated by a Philips Advance 71A6092AEE ballast (452 system Watts) operated for 30,000 hours (rated average life of 315W CDM Elite lamp).

Refer to page 6-3 for lead wire information.
 Refer to pages 6-10 to 6-11 for ballast dimensions.
 Refer to page 6-9 for wiring diagram.

Note: For Electronic HID Ballasts, See Section 6.

Philips Advance HID ballasts are available to operate the wide variety of metal halide, high pressure sodium and low pressure sodium lamps available in today's marketplace.

Like fluorescent, HID lamps are gas discharge lamps. Light is produced by an arc discharge between two electrodes located at opposite ends of an arc tube within the lamp's outer glass envelope. The ballast is the lamp's power supply; its purpose is to provide proper starting and operating voltage and current to initiate and sustain this arc.

Lamp Starting

Probe-Start Metal Halide Lamps

The "traditional" probe-start metal halide lamps (175 through 1500W) have an additional electrode located at one end of the arc tube to assist in lamp starting. These types of lamps require an open circuit voltage (OCV) approximately two times the lamp's operating voltage to initiate the arc.

High Pressure Sodium and Pulse-Start Metal Halide Lamps

High pressure sodium and modern metal halide lamps, which include existing lamps, 150W and less, as well as the new generation of pulse-start metal halide lamps, 150W and greater, have no starting electrodes. In addition to an OCV of approximately two times the lamp voltage, these lamps utilize an "ignitor" to provide a high voltage starting pulse directly across the main electrodes. Once the lamp's arc is established, the ignitor automatically stops delivering pulses, and the lamp comes up to full brightness on its own.

Low Pressure Sodium

Because they have neither a starting electrode nor an ignitor, low pressure sodium lamps require an open circuit voltage approximately three to seven times the lamp voltage to start and sustain the lamp.

Lamp Operation

Gas discharge lamps have a negative resistance characteristic that causes them to draw an increasing amount of current leading to immediate lamp failure if operated directly from the power line. The ballast, therefore, is utilized to limit the current to the correct level for proper operation of the lamp.

Ballast factor is defined as the ratio of light output produced by a lamp operating on a commercial ballast versus the lamp's rated light output. Philips Advance HID ballasts have a nominal ballast factor of 1.0, thus providing full light output.

HID lamps take several minutes to warm-up and reach full lumen output. Additionally, an interruption in the input power or a sudden voltage drop may cause the arc to extinguish. A lamp that is hot will not restart immediately. Before the lamp will relight, it must cool sufficiently to reduce the vapor pressure within the arc tube to a point where the arc will restrike. The approximate warmup and restriking times of the HID lamp groups are as follows:

Light Source	Warm-Up Time	Restrike Time
Metal Halide (Probe Start)	5-4 minutes	10-20 minutes
Metal Halide (Pulse Start)	2 minutes	3-4 minutes
High Pressure Sodium	3-4 minutes	½-1 minute
Low Pressure Sodium	7-10 minutes	3-12 seconds

Ballast Input Voltages

Unlike fluorescent lighting which is operated on either 120V or 277V circuits, power for HID lighting in the U.S. is delivered at any one of five voltages: 120V, 208V, 240V, 277V or 480V. While 120V and 277V are the most popular, because of the heavier loads and sometimes longer runs associated with HID lighting (such as shopping mall parking lots), 208V and 240V power is often used instead of 120V, and 480V instead of 277V.

To address this multiplicity of voltages, the HID ballast industry offers ballasts with multiple input voltage taps on the primary coil. Our 4-TAP design is called a Quadri-Volt ballast and operates on either 120V, 208V, 240V or 277V line voltage. There is a Philips Advance Quadri-Volt ballast for virtually every HID lamp on the market. New 5-TAP designs, which feature the same input voltages as Quadri-Volt ballasts plus 480V, are available for 250W, 400W and 1000W metal halide and high pressure sodium applications.

Luminaires Fusing

Many HID lighting luminaires are sold with protective fuses. The purpose of the fuse is to isolate a luminaire from the lighting circuit in the event of excessive current draw, such as might be caused by a failed ballast. Unfortunately, the fuse will not protect the ballast from failure.

With many luminaires the fuse is physically located in the ballast compartment of the luminaire. The air temperature within this compartment can easily reach 80°C and still be within the design limitations of the luminaire.

Many fuses are temperature sensitive, meaning that the current rating goes down as the ambient temperature goes up. Fuse current ratings are based on the fuse's performance in a 25°C ambient (77°F). In an 80°C ambient, some fuses will open at half their rating.

As a result, the fuse rating shown in the HID ballast tables is calculated at 2½ to 3 times the highest current draw of the ballast: lamp operating, starting or open circuit conditions. Typically fast blow fuses should be used. It is not necessary to use current limiting fuses but some applications may require their use. Additional testing is recommended to determine appropriate fuse type.

Ballast Design Applications

HID lamp ballasts are available in a variety of shapes and sizes for the most popular lighting applications. Six basic designs are in widest use today.

Core & Coil
(71A Series)

Outdoor
Weatherproof
(79W Series)

Postline
(74P Series)

Indoor Enclosed
Rectangular Can
(78E Series)

Fluorescent Can
(72C Series)

Encapsulated Core & Coil
(73B Series)

Core & Coil

The basic ballast is the open core & coil, which is most often used as a component within a lighting luminaire. The core & coil also forms the nucleus of the five other ballast configurations detailed in this section. It consists of either one or two copper coils on a core (or “stack”) of electrical-grade steel laminations. The coils are assembled to core sections that are then surface-welded together. The assembled Philips Advance ballast is vacuum-pressure impregnated with a silica-filled polyester varnish to re-enforce the electrical insulation, preclude moisture, inhibit noise and dissipate heat. Some HID ballast manufacturers apply varnish via a preheat-and-dip process, which only puts a thin coat of varnish on the outer surface of the ballast. Philips Advance core & coil ballasts feature as standard an insulation system rated class H (180°C maximum coil hot spot temp.) for ballasts below 600W and Class N (200°C maximum coil hot spot temp.) for ballasts 600W and higher. When performing in-fixture testing, the maximum allowable average coil temperature (measured by the rise-of-resistance method) is 165°C for Class H ballasts or 185°C for Class N ballasts. The maximum allowable coil face or lead wire temperature (measured by thermocouple) is 150°C for both Class H and Philips Advance Class N ballasts, 170°C for true Class N ballasts.

Encapsulated Core & Coil

Where quiet performance is required, the standard open core & coil ballasts are encapsulated (potted) in a cube-shaped steel can utilizing Class H (180°C) polyester compound. These ballasts carry a Class A noise rating up through 175W and Class B for 250 and 400W. As with the open core & coil, the capacitor (and ignitor where included) are mounted separately within the fixture.

Ballasts with Aluminum Coils

We offer a wide range of ballasts that have coils made out of copper and/or aluminum. All Philips Advance ballasts adhere to ANSI specifications and are certified by respective agencies (UL, CSA, etc.). Ballasts with aluminum coil(s) are designated by -A after ballast catalog number and/or “AL” on wiring diagram.

Fluorescent Can (F-Can)

For indoor commercial applications of HID lighting such as offices, schools and retail stores, ballast noise must be minimized. Ballasts for these luminaires are most often encased and potted in fluorescent ballast type cans and utilize Class A (90°C) asphalt insulating materials (the same as used in fluorescent lamp ballasts).

The Philips Advance line of F-can ballasts comes in two dual-voltage configurations: 120/277V for the US market and 120/347V for the Canadian market. Each unit has built-in, automatically resetting thermal protectors that disconnect the ballast from the power line in the event of overheating. All units are high power factor and include the capacitor within the can. All models for high pressure sodium, low-wattage metal halide and pulse-start metal halide lamps also include the ignitor in the can.

Spacing between ballasts and the mounting surface must be considered when the ballasts are remote-mounted.

Twelve inches between ballasts must be maintained, and if multiple rows vertically are used, there should be at least 12 inches between rows. In addition to ballast and row spacing, the ballast must not be directly mounted to a non-metallic surface. They must be spaced with mounting brackets (see page 7-46 and 7-47 for mounting bracket details) to allow airflow under the ballast base.

Indoor Enclosed

These units are designed for use indoors where the ballast must be mounted remotely from the luminaire. They are most typically used in factories where the luminaire may be mounted in a high-bay where very high ambient temperatures may be experienced. In these instances, the remotely mounted ballast operates cooler, subsequently providing longer life because it is away from both the heat of the ceiling ambient and lamp heat within the fixture.

The case contains the core & coil potted in a Class H (180°C) heat-dissipating resin. The capacitor(s) and ignitor are contained within a separate compartment. Knockouts in both ends of the case facilitate hook-up in the most convenient manner. Wall mounting is accomplished through flanges on the top and bottom of the case. The ballast is a UL Listed product.

Outdoor Weatherproof

Weatherproof ballasts are designed for remote, pole-mounting outdoor applications under all weather conditions. They may also be placed inside of a transformer pole base, but care must be taken to avoid areas prone to flooding because weatherproof ballasts are not water-submersible.

The core & coil with its capacitor and ignitor (where required) are firmly mounted to the heat-sink base. An aluminum cover is placed over the core-&-coil assembly and is bolted with a weather-tight gasket to the base. Using the integral 1” threaded nipple with the provided locknut facilities hook-up to the electrical conduit or to the mounting bracket when used on a pole. The weatherproof ballast may also be placed nipple-up, with a drip loop in the leads, inside a pole base.

Postline

Lantern-type fixtures mounted on slender poles often require ballasts that will fit into these poles. Special, elongated core & coil ballasts are potted in resin in cylindrical cans having a 2.55” outside diameter. All include leads necessary for direct connection to a photocell.

The capacitor and ignitor (where required) are included within this can. A ½” threaded nipple is used for vertical mounting, and leads extend from both ends of the can for ease of installation. The input leads to the ballast also provide for proper connection to the photocell if such is included within the luminaire.

To help prevent overheating, one to three feet of air space should be allowed in the pole above the ballast, and the ballast should be positioned against the post interior wall to provide a heat-sink. All units rated 100W and above now include a mounting kit consisting of an 18” chain to hang the ballast within the pole and a spring clip to force the ballast’s cylindrical can to make line contact with the pole’s interior surface to maximize heat transfer, thus prolonging the ballast life.

Ballast Date and Temperature Codes

Philips Advance HID core & coil ballasts are date stamped on either the top surface or the side surface of the ballast core. The four-digit number represents the week and year of manufacture. The first two numbers indicate the week and the last two indicate the year the ballast was manufactured. The example shows a ballast manufactured during the 36th week of 1989. The three letters are a factory code.

The ballast's UL Bench Top Rise Temperature Code is shown on the label (see above).

UL Bench Top Rise Temperature Code

To facilitate UL inspection, each ballast's UL Bench Top Rise Temperature Code is shown on the Philips Advance core & coil ballast label as 1029X, where 1029 is the UL Standard for HID Ballasts and the X is the temperature code: A, B, C, etc. If a fixture is UL listed for 1029C, then automatically all ballasts with an A, B or C temperature classification are acceptable for use within that same fixture.

If a fixture is UL listed at a specific wattage such as UL 1029C, all ballasts of the same wattage with an A, B or C temperature classification are acceptable for use within that fixture. A ballast with a higher temperature classification (D, E, F, etc.) is not acceptable for use within that same fixture. A ballast with a higher wattage rating than the listed fixture wattage rating is also not acceptable for use and cannot be installed, regardless of the ballast temperature classification.

Reactor ballasts utilizing integral ignitors are thermally protected to limit the maximum ignitor component temperature within the fixture. They have a lower maximum operating temperature limit than a reactor ballast with an external ignitor. When replacing a reactor ballast using an external ignitor with a reactor ballast using an integral ignitor, it is recommended that in-fixture thermal testing is

UL Bench Top Rise Letter Code	Temperature Range for Class H (180°C) Ballasts	Temperature Range for Class N (200°C) Ballasts
A	less than 75°C	less than 95°C
B	75°C < 80°C	95°C < 100°C
C	80°C < 85°C	100°C < 105°C
D	85°C < 90°C	105°C < 110°C
E	90°C < 95°C	110°C < 115°C
F	95°C < 100°C	115°C < 120°C
etc.	etc.	etc.

performed which simulates the application to ensure that the thermally protected reactor does not cycle in the fixture causing the lamp to drop out.

Certifications

Indicates ballast is listed by Underwriters Laboratories, Inc. in accordance with UL 1029 Standard for HID Ballasts. Each ballast is marked appropriately. (UL File Number E94520)

Indicates ballast is component recognized by Underwriters Laboratories, Inc. in accordance with UL 1029 Standard for HID Ballasts. Each ballast is marked appropriately.

Indicates ballast is certified by Canadian Standards Association in accordance with CAN/CSA-22.2 No. 74-92. Each ballast is marked appropriately.

All HID Ballasts are designed and manufactured in accordance with the American National Standards Institute Standard for HID Ballasts, ANSI C82.4.

Indicates ballast is certified and compliant with "Norma Obligatoria Mexicana" (NOM) requirements.

Indicates ballast meets the 88% efficiency requirements of EISA (Energy Independence and Security Act of 2007).

EISA requires all 150W-500W metal halide luminaires manufactured on or after January 1, 2009, to contain a ballast meeting the following levels of efficiency:

- 88% for magnetic or electronic pulse start ballasts
- 94% for magnetic probe start ballasts
- 92% for non-pulse start electronic ballasts for wattages greater than 250W, and
- 90% for non-pulse start electronic ballasts for wattages up to 250W

Please refer to the EISA brochure for more information on EISA Compliant pulse-start ballasts. It can be found at www.philips.com/oemna. In February 2017, the DoE will require new fixtures for Pulse Start Metal Halide ballasts, ranging from 35W to 1000W, to be more energy efficient than they are presently. Probe Start Metal Halide ballasts will not be permitted in new fixtures, within the above wattage range. Replacement ballasts for existing fixtures are not affected by this rule making. Please contact your local Philips sales representative for a list of compliant ballasts.

Restrictions on Hazardous Substances (RoHS) is a European directive (2002/95/EC) designed to limit the content of 6 substances [lead, mercury, cadmium, hexavalent chromium, polybrominated biphenyls (PBB), and polybrominated diphenyl ethers (PBDE)] in electrical and electronic products.

Core & Coil Replacement Kits

Distributor Kits and Replacement Ignitors

Philips furnishes 120/208/240/277 Philips Advance Quadri-Volt core & coil ballasts to allow the stocking distributor to conveniently meet the replacement and retrofit needs of customers. In addition, we now offer 120/208/240/277/480V 5-TAP core & coil ballasts for the most popular applications. 5-TAP ballasts add the 480V input lead to the Quadri-Volt designs. A Quadri-Volt or 5-TAP core & coil, along with the appropriate capacitor, ignitor (where required), mounting bracket & hardware and installation instructions are packed in a space-saving shipping carton. These “kits” eliminate the need for distributors or end-users to stock loose components of single voltage ballasts for 120, 208, 240, 277 and even some 480V applications, though single voltage kits for 480V applications will also be available.

Ignitors are also packaged in individual cartons for replacement needs. There are several different ignitors to meet the needs of the many different lamps. The appropriate ignitor for each ballast is shown near the far right column on the pages 7-11 through 7-34 and 7-59 through 7-60. Additionally, this information is summarized in the tables on pages 7-40 through 7-43.

Dry Capacitors

We have extended the operating voltage range of our dry capacitors from 330V to 400V. This means that our most popular HID replacement kits for 175, 250 and 400W metal halide lamps now contain dry capacitors and offer the additional benefits available only with a dry capacitor.

Those benefits are:

- Dry capacitors are typically 25 to 50% smaller than their oil-filled counterparts, allowing the Philips Advance ballast kit to fit existing fixtures.
- Dry capacitors are rated 105°C, 15°C higher than 90°C oil-filled capacitors, thus providing longer component life.
- Dry capacitors are built using a thermoplastic case, thus eliminating the need for grounding and providing a faster, easier replacement.
- Unlike oil-filled capacitors with exposed tab terminals, dry capacitors have no exposed live parts and thus protect end-users from hazardous voltages.

The bottom line is that our expanded use of dry capacitors makes the contractor's job faster and easier. Look for the “D” at the end of our catalog number; it identifies the ballast kit as one that contains a dry capacitor.

Pre-wired Ignitor Connectors for Capacitor Dry Capacitor Now Rated 105°C

HPS Kit Options

In addition to the standard kits, this and the following page include two HPS kits with special features.

HPS Reactor Kits with Integral Ignitors

“B” suffix denotes 120V reactor circuit kits featuring single-coil reactor ballasts with integral ignitors. The kit includes a mounting bracket (PC848S) sized specifically for the small reactor ballasts.

Compact Reactor Core and Bracket

HPS Kits with Plug-In Ignitors

“C” suffix (p. 7-6 and p. 7-7) denotes standard HPS kit except with plug-in ignitor. A mating receptacle is attached to the core and coil lead wires, ready for immediate connection.

Connectorized ignitor and mating receptacle

Core & Coil Mounting Brackets

Included with all Replacement Kits

PC-848 Mounting bracket for Fig. 1, 6, 7 & 9.

PC-849 Mounting bracket for Fig. 2, 3a, 8, 8a & 10.

PC-848S Mounting bracket for Fig. 9.

- PC-848: To order individual packaged kits, specify PKG 848 (1 brackets with thru bolts).
- PC-849: To order individual packaged kits, specify PKG 849-2 (2 brackets with thru bolts).
- PC-848S: Bracket and thru bolts are included in 120V HPS Reactor Kits.

PC-909 Mounting bracket for Fig. 2, 3a & 8 when used with power-door roadway fixtures.

HID Val-U-Pak Plus Replacement Kits

Val-U-Pak Plus

HID installations just got simpler, more convenient and significantly faster with the new Val-U-Pak Plus kits.

Why Should You Change All the Components?

HID fixtures are generally difficult to reach and to service. Subsequently, the cost of labor can often exceed the cost of the ballast and/or lamp. When the ballast, capacitor or ignitor reaches end-of-life, it is recommended that all of these components in the fixture be replaced at the same time. It is equally suggested that the lamp also be replaced, assuring optimal performance of the system and eliminating the need to re-service the fixture during the entire life-cycle of the lamp.

Features of Val-U-Pak Plus:

- **Added Versatility** – 5-Tap core and coil ballast for the six most popular applications
 *Adds the 480V input lead to the Quadri-Volt design
- **All Inclusive** – Premium grade clear lamp supplied in kit is covered by a limited warranty from Philips Lighting Electronics N.A.
- **Higher Wattage Options** – Philips Advance Class N (200°C) insulation system on 1000W units provides an additional 20°C margin for high ambient applications.

† Ordering information:

Replacement/retrofit ballast kits – indicated by bold type and -001D or -001 suffix. Refer to pages 7-4 to 7-9 for more information on replacement kits.

Original equipment ballasts – typically ordered with capacitor (as shown).
 -500D includes core & coil with dry-film capacitor.
 -500 includes core & coil with oil-filled capacitor (required for higher wattage ballasts).

May also be available with welded bracket, and/or without capacitor:
 -510D includes core & coil with welded bracket and dry-film capacitor.
 -510 includes core & coil with welded bracket and oil-filled capacitor.
 -600 core & coil only (no capacitor).
 -610 core & coil with welded bracket (no capacitor).

†† Each ballast requiring an ignitor is furnished standard with a short-range ignitor model shown for use within fixtures. Long-range ignitors are available separately if required. See pages 7-39 to 7-43 for additional information.

• **Maximum Input Current** – For HX and R circuits, value is the highest of starting, operating or open circuit current. For CWA, SCWA and CWI circuits, value is the operating current.

NOM Certified ballast available for Mexican market. Add "ML" to suffix (example -500DML). Ballast is branded Philips.

☼ Canadian replacement/retrofit ballast kit indicated by bold type. Refer to page 7-8.
 ♦ Includes auto-reset thermal protection.

† Ordering information:

Replacement/retrofit ballast kits – indicated by bold type and -001D or -001 suffix. Refer to pages 7-4 to 7-9 for more information on replacement kits.

Original equipment ballasts – typically ordered with capacitor (as shown).
 -500D includes core & coil with dry-film capacitor.
 -500 includes core & coil with oil-filled capacitor (required for higher wattage ballasts).

May also be available with welded bracket, and/or without capacitor:
 -510D includes core & coil with welded bracket and dry-film capacitor.
 -510 includes core & coil with welded bracket and oil-filled capacitor.
 -600 core & coil only (no capacitor).
 -610 core & coil with welded bracket (no capacitor).

†† Each ballast requiring an ignitor is furnished standard with a short-range ignitor model shown for use within fixtures. Long-range ignitors are available separately if required. See pages 7-39 to 7-43 for additional information.

• Maximum Input Current – For HX and R circuits, value is the highest of starting, operating or open circuit current. For CWA, SCWA and CWI circuits, value is the operating current.

NOM Certified ballast available for Mexican market. Add "ML" to suffix (example -500DML). Ballast is branded Philips.

☀ Canadian replacement/retrofit ballast kit indicated by bold type. Refer to page 7-8.

✦ Includes auto-reset thermal protection.

† Ordering information:

Replacement/retrofit ballast kits – indicated by bold type and -001D or -001 suffix. Refer to pages 7-4 to 7-9 for more information on replacement kits.

Original equipment ballasts – typically ordered with capacitor (as shown).
 -500D includes core & coil with dry-film capacitor.
 -500 includes core & coil with oil-filled capacitor (required for higher wattage ballasts).

May also be available with welded bracket, and/or without capacitor:

- 510D includes core & coil with welded bracket and dry-film capacitor.
- 510 includes core & coil with welded bracket and oil-filled capacitor.
- 600 core & coil only (no capacitor).
- 610 core & coil with welded bracket (no capacitor).

†† Each ballast requiring an ignitor is furnished standard with a short-range ignitor model shown for use within fixtures. Long-range ignitors are available separately if required. See pages 7-39 to 7-43 for additional information.

• **Maximum Input Current** – For HX and R circuits, value is the highest of starting, operating or open circuit current. For CWA, SCWA and CWI circuits, value is the operating current.

** The 330 Watt Lamp, ANSI Code C185 is an energy saving, screw in replacement lamp for the M59 or M135 and M155 PS lamps that may reduce input watts up to 18% on existing ballasts.

Fig. M

NOM Certified ballast available for Mexican market. Add "ML" to suffix (example: -500DML). Ballasts are branded Philips.

🇨🇦 Canadian replacement/retrofit ballast kit indicated by bold type. Refer to page 7-8.

❖ Includes auto-reset thermal protection.

◆ Compact 3 x 4 core design.

ⓔ Meets EISA 88% efficiency requirements.

† Ordering information:

Replacement/retrofit ballast kits – indicated by bold type and -001D or -001 suffix. Refer to pages 7-4 to 7-9 for more information on replacement kits.

Original equipment ballasts – typically ordered with capacitor (as shown).

-500D includes core & coil with dry-film capacitor.

-500 includes core & coil with oil-filled capacitor (required for higher wattage ballasts).

May also be available with welded bracket, and/or without capacitor:

-510D includes core & coil with welded bracket and dry-film capacitor.

-510 includes core & coil with welded bracket and oil-filled capacitor.

-600 core & coil only (no capacitor).

-610 core & coil with welded bracket (no capacitor).

†† Each ballast requiring an ignitor is furnished standard with a short-range ignitor model shown for use within fixtures. Long-range ignitors are available separately if required. See pages 7-39 to 7-43 for additional information.

• **Maximum Input Current** – For HX and R circuits, value is the highest of starting, operating or open circuit current. For CWA, SCWA and CWI circuits, value is the operating current.

** The 860 Watt Lamp, ANSI Code M194 is an energy saving, screw in replacement lamp for the M47 or M141 PS lamp that may reduce input watts up to 18% on existing ballasts.

NOM Certified ballast available for Mexican market. Add "ML" to suffix (example: -500DML). Ballasts are branded Philips.

🇨🇦 Canadian replacement/retrofit ballast kit indicated by bold type. Refer to page 7-8.

◆ Special compact 4¼ x 4¼ core design.

† Ordering information:

Replacement/retrofit ballast kits – indicated by bold type and -001D or -001 suffix. Refer to pages 7-4 to 7-9 for more information on replacement kits.

Original equipment ballasts – typically ordered with capacitor (as shown).

- 500D includes core & coil with dry-film capacitor.
- 500 includes core & coil with oil-filled capacitor (required for higher wattage ballasts).

May also be available with welded bracket, and/or without capacitor:

- 510D includes core & coil with welded bracket and dry-film capacitor.
- 510 includes core & coil with welded bracket and oil-filled capacitor.
- 600 core & coil only (no capacitor).
- 610 core & coil with welded bracket (no capacitor).

†† Each ballast requiring an ignitor is furnished standard with a short-range ignitor model shown for use within fixtures. Long-range ignitors are available separately if required. See pages 7-39 to 7-43 for additional information.

• Maximum Input Current – For HX and R circuits, value is the highest of starting, operating or open circuit current. For CWA, SCWA and CWI circuits, value is the operating current.

NOM

Certified ballast available for Mexican market. Add "ML" to suffix (example: -500DML). Ballasts are branded Philips.

🍁 Canadian replacement/retrofit ballast kit indicated by bold type. Refer to page 7-8.

LL Special high efficiency/ low-loss ballast.

Dry-Film Capacitors Thermal Plastic Case
Dry-film capacitors contain no oil, are furnished with 8" leads and include integral resistor where required.

Oil-Filled Capacitor
Furnished with appropriate leads and/or resistors where required. Case must be grounded.

Note: Capacitor boots available, order catalog number CB-100.

75	280	7C750S28RA	2.00	5.00	71A86x5

1. "R" suffix denotes capacitors with a discharge resistor where required by UL.

2. MD_ denotes 90° Oil Filled, 7C_ denotes 105° Dry Film with leads.

Ballasts-to-Lamp Remote Mounting Distances

Ignitors

Ballasts that include an ignitor to start the HID lamp are limited in the distance which they may be mounted remotely from the lamp because the ignitor pulse attenuates as the wire length between the ballast and lamp increases. All Philips Advance open core & coil ballasts listed in this Atlas include a **standard ignitor** that provides the proper electrical pulse to start lamps when the ballast is mounted **within** the lighting fixture. For most of these ballast/ignitor combinations, the maximum ballast-to-lamp distance is listed as 2 feet. For ballast-to-lamp distances greater than the capability of the standard ignitor, a **long-range ignitor** is required.

Use the tables on the following pages to find the proper long range ignitor for various metal halide and high pressure sodium ballasts. Not all ballasts listed in the Atlas have long-range ignitor options. It may be necessary to use a ballast employing a different circuit to achieve the needed ballast-to-lamp distance.

Whichever ignitor is used, it must be installed with and adjacent to the core & coil, as the two components work together to deliver the proper pulse to the lamp. When remote mounting the ballast away from the lamp, the ignitor must be located next to the ballast and not next to the remote lamp in order to utilize the full ballast to lamp distance range. If the ignitor is located next to the remote lamp, the usable ballast to lamp remote mounting distance will be cut in half.

Metal Halide Ballasts

The distances at which most metal halide ballasts can be located from their respective lamps are limited by the ballast-to-lamp wire size. The exceptions being the ballasts for the new lamps that require an ignitor for starting. The mounting distances for these are limited by the ignitor as shown on the following page.

Use this chart to determine the minimum wire size required for the metal halide (not requiring an ignitor) lamps shown:

Lamp		Maximum One-Way Length of Wire between Lamp and Ballast (ft) (Voltage Drop Limited to 1% of Lamp Voltage)				
Wattage	Metal Halide	#10	#12	#14	#16	#18
175	M57	425	265	165	105	65
250	M58	300	190	120	75	45
1-400 or 2-400	M59	200	125	75	50	30
1000	M47	325	205	125	80	50
1500	M48	225	140	85	55	35

Round Case

RW33CC1252 MOUNTING CLIP for Round Case (Furnished as standard with -001 suffix ballasts and all -IC suffix replacement ignitors.)

LISOD

The Philips Advance shut-off device (LISOD) enhances the reliability of High Intensity Discharge (HID) lighting systems where ignitors are utilized to start the HID lamps. This includes all high pressure sodium lamps as well as all low, medium and high wattage pulse-start metal halide lamps. The LISOD shut-off device is used in addition to a standard ignitor.

The LISOD shut-off device increases the life of the ignitor by disabling it from the circuit and eliminating any concern over long-term ballast reliability due to continuously pulsing ignitors when a lamp is burned out. The LISOD provides a simple solution to eliminate lamp cycling typically associated with lamps that have reached their end-of-life. The LISOD disables the ignitor after 15 minutes of pulsing in cases when lamp is taken out of socket or lamp fails to ignite.

- Compatible with any Philips Advance Reactor (R), High-Reactance (HX) and Constant Wattage Autotransformer (CWA) ballast and ignitor circuit that includes a 120V input tap
- Integral timer automatically disables ignitor from ballast circuit 15-minutes after power is applied to the ballast
- Extends ignitor life, which is typically rated for 10,000 hours of continuous pulsing
- Protects ballast coil insulation from potential damage due to a continuously pulsing ignitor
- Prevents cycling of end-of-life lamps making identification for lamp replacement easy
- Automatically resets/restarts itself after 0.6 second of power interruption (voltage dropout)

Catalog Number	Description	Quantity Per Carton
LISOD1-IC	Ignitor shut-off device for HID CWA, HX and R ballasts with ignitors. Individual carton packaging	1
LISOD1	Ignitor shut-off device for HID CWA, HX and R ballasts with ignitors. Bulk packaging	50

All Philips Advance dual-volt, F-can ballasts include auto-reset thermal protection for both taps.

Replacement ballasts in individual cartons indicated by bold type with suffix -001.

- Ballasts with suffix -900 include integral XTENXA Long-Range Ignitor for 50ft. max. ballast to lamp distance. Also suitable for shorter distances.
- * All 150W thru 400W F-Can Ballasts are not EISA compliant.

† **Ordering information:**

Original equipment ballasts – typically ordered with capacitor (as shown)

-500D includes core & coil with dry-film capacitor

May also be available without capacitor:

-600 core & coil only (no capacitor)

• For CWA, figure is operating current. For HX circuits, figure is highest of starting, operating or open circuit currents.

†† Each ballast requiring an ignitor is furnished standard with the **short-range** ignitor model shown for use within fixtures. Long-range ignitors are available separately, if required. See pages 7-39 to 7-43 for additional information.

ⓔ Indicates the ballast meets the 88% efficiency requirements of EISA (Energy Independence and Security Act of 2007)

** The 145 Watt Lamp, ANSI Code C192, is an energy saving, screw in replacement lamp for the M57 or M152 lamps that may reduce input watts up to 15% on existing 175W ballasts.

*** The 205 Watt Lamp, ANSI Code C184 is an energy saving, screw in replacement lamp for the M58 or M138 and M153 PS lamps that may reduce input watts up to 18% on existing ballasts.

- † Ordering information:
 Order catalog number indicated. If spring clip and support chain kit is desired, order separately.
 • For HX and R circuits, figure is highest of starting, operating or open circuit current.

PL-1 and PL-2 - Spring Clip and Support Chain Kits

Included pre-assembled with all postline ballasts rated 100W and above. Support chain lowers ballast 18" down post while 6" or 10" spring clip forces ballast against post's inner wall to assure proper heat dissipation away from ballast's internal components. Also includes factory-connected ground wire to provide for proper grounding of ballast case and fixture housing. Kits include instruction sheet and may be ordered separately to retrofit existing installations.

order separately)

International Electromagnetic Hid Ballasts

We offer an extensive range of High Intensity Discharge ballasts to run ANSI specification (U.S. style) lamps. These ballasts are suitable for international markets and range in voltage from 120 through 240V, 50 Hz.

Philips Advance HID ballasts are available to operate the wide variety of mercury, metal halide, high pressure sodium and low pressure sodium lamps available in today's marketplace.

Like fluorescent, HID lamps are electric discharge lamps. Light is produced by an arc discharge between two electrodes located at opposite ends of an arc tube within the lamp's outer glass envelope. The ballast is the lamp's power supply; its purpose is to provide proper starting and operating voltage and current to initiate and sustain this arc.

Core & Coil

The basic ballast is the open core & coil, which is most often used as a component within a lighting fixture. The core & coil also forms the nucleus of the five other ballast configurations detailed in this section. It consists of either one, two or three copper coils on a core (or "stack") of electrical-grade steel laminations. The coils are assembled to core section, which are then surface-welded together. The assembled Philips Advance ballast is vacuum impregnated with a silica-filled polyester varnish to re-enforce the electrical insulation, preclude moisture, inhibit noise and dissipate heat. Some HID ballast manufacturers apply varnish via a preheat-and-dip process, which only puts a thin coat of varnish on the outer surface of the ballast.

Encapsulated Core & Coil

Where quiet performance is required, the standard open core & coil ballasts are encapsulated (potted) in a cube-shaped steel can utilizing Class H (180°C) polyester compound. These ballasts carry a Class A noise rating up through 175W and Class B for 250 and 400W. As with the open core & coil, the capacitor (and ignitor where included) are mounted separately within the fixture.

EPAAct 2005

The Energy Policy Act of 2005 (EPAAct 2005) requires that mercury vapor lamp ballasts shall not be manufactured in or imported into the United States after January 1, 2008. With regard to imported ballasts, the standard applies to both the importing of ballasts as well as the importing of mercury vapor lamp luminaires with ballasts, since importing a mercury vapor lamp luminaire with a mercury vapor lamp ballast would be the same as importing a mercury vapor lamp ballast. Therefore, as of January 1, 2008, luminaires cannot be imported with mercury vapor lamp ballasts.

Replacements

For capacitors, see pages 7-37 and 7-38.

For ignitors, see pages 7-39 to 7-43.

Special Voltages

For voltage and frequencies not shown in the charts of the following pages, please contact your Philips sales representative.

CERTIFICATIONS

Indicates ballast is listed by Underwriters Laboratories, Inc. in accordance with UL 1029 Standard for HID Ballasts. Each ballast is marked appropriately.

All HID Ballasts are designed and manufactured in accordance with the American National Standards Institute Standard for HID Ballasts, ANSI C82.4.

Norma Obligatoria Mexicana.
(Contact your local salesperson for availability.)

Restrictions on Hazardous Substances (RoHS) is a European directive (2002/95/EC) designed to limit the content of 6 substances [lead, mercury, cadmium, hexavalent chromium, polybrominated biphenyls (PBB), and polybrominated diphenyl ethers (PBDE)] in electrical and electronic products.

50 HZ Core & Coil Ballasts

Mercury

Ballasts for operating Mercury lamps are for use outside the USA ONLY

LuxSense Daylight Regulation Sensor

Provides daylight regulation via a single miniature sensor

The LuxSense daylight sensor can control up to 20 fixtures equipped with Philips Advance Mark 7 0-10V fluorescent ballasts or compatible e-Vision HID ballasts, as well as Xitanium drivers. The sensor measures reflected light coming from the designated surface below, such as a desk or tabletop. It dims lamp output when the light level exceeds the required level defined by the LuxSense sensor. The light level easily adjusts via a simple dial.

Luxsense provides the benefit of a comfortable and controllable level of illumination throughout the working day. More importantly it can provide energy savings when installed near windows where natural illumination is usually greatest.

It is also designed to save additional energy by reducing excess light output occurring from design factors of lumen depreciation. Lamps are dimmed slightly when new, but then raised over time to compensate for depreciation of lamp output that occurs in normal lamp aging.

Up to a potential 32% energy savings without sacrificing visual comfort*
State-of-the-art daylight sensor

No specific lighting control training needed
Simple to use lighting control system; just adjust the rotating diaphragm to set the desired light level

Flexibility in design
Can be incorporated directly into a fixture or alternatively clipped to a T8 or T5 lamp**

For more information,
visit <http://www.philips.com/lightingcontrolsna>.

* Galasiu, A.D. "Energy saving lighting control systems for open-plan offices: field study," National Research Council Canada, v4 no1, July 2007 pg. 15 -16.

** External installation low voltage wiring where allowed by local codes.

MicroLuxSense Daylight Regulation Sensor

Provides daylight regulation via a single miniature sensor

MicroLuxSense is a simple and easy to design-in daylight compensation option for luminaires equipped with a Philips 0-10V dimming ballast/driver for a variety of technologies including LED. The sensor measures reflected light coming from the surface below. It dims lamp output when the light level exceeds the required light level defined by the light sensor set point providing the end-user energy savings at ease.

MicroLuxSense arrives from the factory ready to install. It comes in a standard preset configuration so no complex commissioning is required. Its versatile design allows this device to be installed adjacent to the luminaire with the ceiling mounting plate option or in the luminaire either mounted between the louvers or recessed in the housing. MicroLuxSense contains a simple-to-use dial for adjusting light levels in the field. It also shares the same footprint as the ActiLume family of sensors making one luminaire design capable of housing a variety of control options from Philips.

MicroLuxSense is ideal for private offices, meeting and conference rooms, classrooms, break areas and smaller open office area, anywhere with ample amounts of ambient light are present with the potential for providing energy savings without sacrificing visual comfort*.

Up to a potential 32% energy savings without sacrificing visual comfort*
Advanced daylight harvesting sensor

Enables compliance with energy codes and may qualify for additional LEED points
Sustainable solution

Automated regulation of artificial lighting allows for task illumination to be maintained
Maximize visual comfort

One sensor can be used for continuous rows or multiple sensors with single luminaires
Regulate up to 20 luminaires

ActiLume 1-10V Lighting Control System

Lighting control made simple

The ActiLume 1-10V System is a simple-to-install and easy-to-use lighting control system designed to operate in personal or open office settings. This system contains both a light sensor for daylight harvesting and movement detector for occupancy sensing. Research shows that daylight and occupancy sensing functionality provides a potential energy savings of up to 65% without sacrificing light levels.* ActiLume 1-10V can automatically switch the lights on and off with its occupancy sensing feature. The daylight harvesting feature will dim the luminaires when enough daylight enters the room offering automatic energy savings without the need for complex commissioning.

The ActiLume 1-10V System consists of a sensor and a control unit designed to be built directly in to a luminaire. The sensor provides both daylight harvesting and occupancy detection. The system can be used with any Philips Advance 0-10V dimming or fixed output ballast/driver. The ActiLume 1-10V sensor shares a common footprint with other sensors in the ActiLume family making one luminaire design capable of housing a variety of control options from Philips.

Installers and end-users do not have to worry about complicated programming anymore. Commissioning is effortless – simply use a small screwdriver to adjust the light level and/or occupancy detection time delay. The ActiLume 1-10V System is a truly Plug-and-Play lighting control system that provides excellent visual comfort and automatic energy savings with simple installation.

Save on installation and maintenance costs.
No professional training required for commissioning and light level adjustments.

Installation ease with one-step commissioning

Maximize visual comfort

Automated regulation of artificial lighting allows for task illumination to be maintained.

For more information,
visit <http://www.philips.com/lightingcontrolsna>.

Dynadimmer 0-10V Lighting Control System

A simple, easy-to-install outdoor controller for electronic lighting systems

The Dynadimmer is a stand-alone dimming control with a 0-10V dimming output that can be used in combination with a compatible dimmable electronic driver. Easy to install into a luminaire or pole without any need for external control components or additional signal wiring, it is fully flexible and can be reprogrammed at any time to fit new lighting demands if changes are needed.

The Dynadimmer can be configured to dim to any level that the end-user wishes at set periods, with a maximum of five set periods. Both the levels and the time period are configured with an easy-to-use software tool, which also calculates and displays the energy savings that may be obtained from a particular dimming schedule.

The designed configuration is then loaded into a standard personal computer that will be used later to program the Dynadimmer via a USB cable. This configuration can be modified at any time by downloading a new dimming schedule to adapt the lighting to a new situation or simply fine-tune the savings.

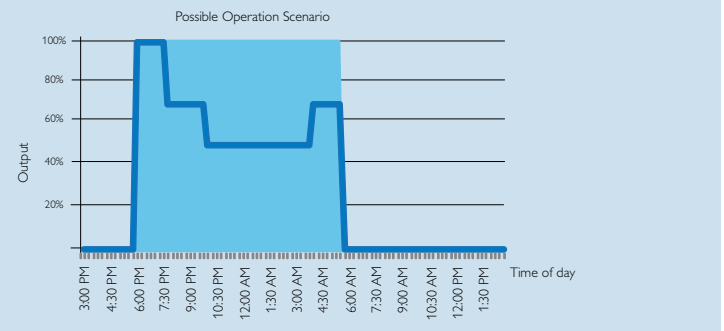

The five time periods and five dim levels provide an optimal schedule whether the application is an industrial area, parking lot, residential area or road. The Dynadimmer can help to meet certain road/area-lighting requirements and standards, which entail the introduction of illumination levels that take account of road use and/or traffic flows.

Energy savings and reduced light nuisance through dimming

Small size that can fit within almost any luminaire

Easy-to-use software that can provide a forecast of energy savings

Energy savings may be maximized with the Dynadimmer. The fact that any level can be configured at any time makes very low levels late at night possible, high levels at peak times (though not necessarily 100%) and medium levels during the transitional periods. For example, a dimming schedule like the one shown in the picture projects an overall yearly energy saving of 35%.

Dynadimmer Standard Programming Schedule

Ordering information

Ordering Code	Description	Compatible Ballasts
LLC7230	Dynadimmer 0-10V	0-10V eHID ballasts and LED drivers
LCC7210	USB PC Cable	
KIT7210	Programming Kit	

Technical data

Storage conditions

Temperature	min -40°F (-40°C) / max 176°F (80°C)
Relative humidity	min 5% / max 95% RH

Operating conditions

Ambient temperature	min -22°F (-30°C) / max 140°F (60°C)
Case temperature	80° C
Relative humidity	min 10% / max 90% RH (no condensation)

Mains connection

Operational voltage	120-277V ± 10%
Frequency	50/60 Hz ± 5%
Maximum load	Not applicable

Mains / 1-10v connections

Connector type	WAGO 250 Cage Clamp
Drivers per Dynadimmer 1-10v	2 max.
Wire range	18 gauge
Wire strip length	8 in (203 mm)
Power consumption	0.5W at 220VAC/60Hz

Programming connector

Connector type	Micro MATE-N-LOK connector
Factory setting	After power-up, the control voltage will rise slowly to +5VDC

Dim interface

Control voltage	1-10V
Max. current	0.3mA sinking
Dim curve	Defined by selected driver
Protection	Protected against accidental connection with mains voltage
Output impedance	2700 ohm

Housing

Protection class	Tested to IP66
Dimensions (H x W x L)	1 x 2.125 x 3.15 inches (25 x 54 x 80 mm)
Weight	0.085 Kg
Material	PC-GE LEXAN 223R-111
Color	Black
Glow wire test	≥ 850° C at 1 mm material thickness
Flammability	UL94-V2 at 0.75 mm material thickness UL94-V0 at 6 mm material thickness
Fixation	M8 x 16 bold (class 8.8) or 2 x M4 screw with cylinder head

The LLC7230 is designed to be built into a luminaire, a box, an enclosure or the like and is not intended to be mounted outside a luminaire, etc., without special precautions. The LLC7230 housing provides insulation for class 2.

Safety

1-10V interface	The interface is double (0-10V) isolated from the mains supply (4kV routine test for transformer)
Programming interface	The interface is double (0-10V) isolated from the mains supply (4kV routine test for transformer)

Warning

Mains has to be disconnected before connecting the programmer. Failure to do so could result in personal injury and/or damage to the Dynadimmer.

Starsense Lighting Control System

A cost-effective telemanagement outdoor lighting control system

Starsense is a telemanagement system with remote control of outdoor light points on highways, roads, streets and in residential areas. It is designed to save energy by enabling individual light points to be switched on or off at any given time or set to any dimming level. It makes outdoor lighting installations intelligent and dynamic.

Features and benefits

Starsense controls and monitors any lamp type from electromagnetic ballasts to electronic drivers making it a flexible choice.

Starsense can accurately detect failures in the light points which can lower maintenance costs.

Starsense's user-friendly software tool is easily accessible from the internet and shows relevant information such as failures, energy consumption, lifetime, etc. With real-time monitoring using web mapping services from the Internet, this system is able to provide immediate information and feedback.

Please contact your local Philips sales representative to learn more about the Philips Starsense solutions.

Technical data

Operating conditions		Data rate	250 kbit/s
Ambient temperature (t _a)	-22°F to 140°F (-30°C to 60°C)	Antenna	Internal 1/4 wave monopole
Relative humidity	10 to 90%	Transmitter output power	89dBμV/m
Max. housing temperature	176°F (80°C)	Receiver sensitivity	46dBμV/m
Lifetime	90% operational products after 80,000 hours of operation	Transceiver security	AES128 encryption
		* NOTE: Multiple OLC's should be in range of the Segment Controller.	
Non-operating conditions		Certifications/misc	
Temperature	-22°F to 176°F (-30°C to 80°C)	Conducted emission	FCC 47 Part 15
Relative humidity	5 to 90%	Radiated emission	FCC 47 Part 15
		ANSI	136.10
		Flammability	UL 94V-0
		Protection class	IP54
		Housing material	Polycarbonate (PC)
Mains connection		Damp heat	IEC 60068-2-30
Mains voltage (LFC7320)	120VAC ±10%	Salt mist	IEC 60068-2-11
Mains voltage (LFC7310)	240/480VAC ±10%	Mixed gas corrosion	IEC 60068-2-60
Mains frequency	50/60 Hz ± 5%	Vibration	IEC 60068-2-6
Max. load wattage	750VA @ 120V 1000VA @ 277V, 347V, 480V	Rain tightness test	UL773
Recommended external fuse	15A Maximum	Temperature sensor	37°F (3°C) (-22°F to 140°F / -30°C to 60°C range)
		Agency marking	UL, CSA, NOM
Power consumption			
Operating wattage	50W		
Accuracy integrated power	±5% consumption metering		
Radio frequency			
Protocol	IEEE802.15.4		
Frequency band	906-924MHz		
Range	300m (OLC to OLC) 50m (OLC to SC)

All products contained within this catalog carry a limited warranty from the date of manufacture.

For up-to-date warranty information, go to our web site at
<http://www.usa.lighting.philips.com/support/support/warranty>
or contact your local Philips sales representative.

5-Tap - An HID ballast that allows for a choice of five different input voltages.

AC (Alternating Current) - The common form of electricity from power plant to home/office. Its direction is reversed 60 times per second in the U.S.; 50 times in Europe.

AllnGaP - The preferred LED (Light Emitting Diode) chip technology containing Aluminum, Indium, Gallium, and Phosphorous to produce red, orange and amber-colors.

AllStart Technology - Philips proprietary, high efficacy, ceramic metal halide (CDM) lamp technology that allows this class of lamps to operate on either standard probe-start, or pulse-start magnetic ballasts. Consult Philips SAG-100 for lamp details.

Ambient Sound Levels - "Background noise" generated by electrical equipment operating in a building.

Ambient Temperature - Temperature of the atmosphere of the surrounding environment.

Ampere ("Amp") - A measure of electrical current.

ANSI (American National Standards Institute) - Group that generates voluntary product performance standards for many U.S. industries.

ANSI Watts - System wattage as measured utilizing a reference ballast and lamps on a bench top in open air as prescribed by ANSI C82.2.

Anti-Arc Circuit - Circuitry used to detect and limit arcing of ballast output leads.

Anti-Striation Circuit - Circuitry used to detect and reduce striations or spiraling in energy saving lamps due to low temperature or low current operation.

Arc (Lamp) - Intense luminous discharge formed by the passage of electric current across a space between electrodes.

Auto-Restrike - Circuitry used to restart the lamps without resetting the power to the ballast.

Autotransformer - Tapped winding transformer that changes the voltage available to the voltage required by a particular load.

Ballast - Device for starting and regulating fluorescent and high intensity discharge lamps among other lamps.

Ballast Cycling - Undesirable condition under which the ballast turns lamps on and off (cycles) due to the overheating of the thermal switch inside the ballast. This may occur for a number of reasons, including but not limited to, incorrect lamps, improper voltage being supplied, high ambient temperature around the fixture, or the early stage of ballast failure.

Ballast Efficacy Factor (BEF) - Measure used to compare various lighting systems based upon light output and input power. Higher BEF is favorable. $BEF = \text{Ballast Factor} \times 100 / \text{Input Watts}$.

Ballast Factor - Measure of light output from lamp operated by commercial ballast, as compared to a laboratory standard reference ballast.

Ballast Losses - Power that is supplied to the ballast but is not converted into light energy.

Ballast Luminous Efficiency (BLE) - Measure used to compare ballast efficiency based upon lamp power and input power. $BLE = \text{Total Lamp Arc Power} / \text{Input Watts}$.

Ballast Noise "Hum" - Sound made by operating Core & Coil assemblies in both electromagnetic and electronic ballasts, generated by the vibration of laminations in the electromagnetic field that transforms the voltage and current used by discharge lamps. The sound made by high frequency electronic ballasts is lower and any noise made by models with electronic power factor correction circuits is inaudible.

Ballast Regulation - The ability of a ballast to control lamp wattage (and therefore light output) when subject to changes in line voltage.

Bin - In LED's, the systematic dividing of distribution of performance parameters (Flux, Color or CCT, and Vf) in to smaller groups that meet aesthetic requirements of the assembly.

Binning - The separation of LEDs subsequent to a production run for full manufactured, distribution in terms of color, flux and forward voltage.

Canadian Standards Association (CSA) - Association that generates product performance and safety standards for many Canadian industries.

Capacitor - Device in ballast that stores electrical energy.

Centigrade (C) - Celsius temperature scale where $0^{\circ}\text{C} = 32^{\circ}\text{F}$ and $100^{\circ}\text{C} = 212^{\circ}\text{F}$.

Chip - A very small square of semi-conducting material. Also known as a die, it is the active light-emitting component of an LED.

Circle E - Marking on ballast that shows compliance with Federal Ballast Energy Law (Public Law 100-357).

Coil - Windings of copper or aluminum wire surrounding a core in ballast.

Conformal Coating - Material that surrounds and adheres to components and protects them.

Constant Wattage Autotransformer (CWA) - An HID ballast in which the primary and secondary coils are electrically connected and a capacitor is required as part of the lamp (secondary) circuit.

Core - Component of electromagnetic ballast that is surrounded by the coil and comprised of steel laminations or solid ferrite material.

Core & Coil Ballast - Another term for electromagnetic ballast.

Crest Factor - Ratio of peak lamp current to RMS (average) lamp current.

CSA E - Fluorescent lamp ballast energy efficiency regulations in Canada SOR 2006-271.

Cycling - See 'Ballast Cycling'.

DC forward current - Continuous direct current applied which is constant over time.

Decibel (dB) - Unit of measurement of the volume of sounds.

Die - Chip: heart of the LED.

Digital Addressable Lighting Interface (DALI) - An industry standard digital protocol that allows components from different manufacturers (ballasts, sensors, controllers, etc.) to be mixed together seamlessly into complete systems.

Diode - A two-electrode device with an anode and a cathode that passes current in only one direction. It may be designed as an electron tube or as a semiconductor device.

Direct Current (DC) - An electrical current flowing steadily in one direction only.

Discharge Lamp - A light producing device that depends on an electric arc, rather than a filament, to create illumination.

Driver - Electronics used to power illumination sources also referred to as a ballast.

Efficacy - See 'System Efficacy'.

Electrode - See 'Filament'.

Electromagnetic Ballast - A low frequency (50 - 60 Hz.) ballast that uses a "Core & Coil" assembly to transform electrical energy (voltage and current) to start and operate fluorescent and high intensity discharge (HID) lamps.

Electromagnetic Interference(EMI) - Electrical interference (noise) generated by electrical and electronic devices. Levels generated by high frequency electronic devices are subject to regulation by the Federal Communications Commission (FCC). Two classifications exist Non-Consumer (also referred to as Class A or Commercial) and Consumer (also referred to as Class B or Residential).

Electronic Ballast - A ballast that, with the aid of electronic components converts 60 Hz. input voltage and current to high frequency (20 kHz to 60 kHz.) to operate fluorescent and high intensity discharge (HID) lamps.

Electronic Component - A device or part employed in an electronic circuit to obtain some desired electronic action.

Energy – Work done by an electrical system measured in watts.

EOL Protection Circuit – For all T5 and smaller lamps, operating parameters within the ballast that, when exceeded, will shutdown the ballast.

ETL – Independent Intertek Testing laboratory, which is an independent testing facility, that performs ballast testing.

Federal Communication Commission (FCC) – The U.S. federal agency that is charged with regulating electrical interference emissions of the electromagnetic spectrum. The regulation entitled, “Title 47 CFR Part 18” deals with electromagnetic interference (EMI) from all lighting devices operating at frequencies higher than 9 kilohertz (kHz).

Feedback Signal – A control signal which regulates power through the LED driver to produce various effects in LEDs.

Filament – Coated coil of special wire that emits electrons or light when heated.

Filament Voltage – Voltage applied to heat the lamp filament coil.

Fluorescent Lamp – Gas filled lamp in which light is produced by the interaction of an arc with phosphors lining the lamp’s glass tube.

Forward Current – Current through a diode in the direction of its greatest conduction.

Forward Voltage (VF) – The voltage across a diode for a given forward current.

Frequency – Rate of alteration in an AC current. Expressed in cycles per second or Hertz (Hz).

Fundamental Frequency – Lowest frequency in a complex waveform. Also known as first harmonic.

Harmonic Distortion – A measurement of the magnitude of voltage and current harmonics as compared with the amplitude of the fundamental frequency. Harmonic distortion can be generated by a load and fed back into the AC mains, causing distortion of the sinusoidal waveform.

Harmonics – Refers to components of the overall frequency, an integral multiple of the fundamental sinewave frequency.

Hertz (Hz) – Unit used to measure frequency (cycles per second) of alternating current or voltage.

High Frequency Electronic Ballast – In this book, refers to the operation of electronic ballasts as frequencies > 20,000 Hertz (20 kHz).

High Intensity Discharge (HID) Lamp – A discharge lamp containing an arc tube in which the active elements within (mercury, sodium, etc.) becomes vaporized (a gaseous state) within the electric arc stream to produce light.

High Light Output – Ballast with a nominal ballast factor of 1.18.

High Power Factor Ballast – A ballast in which the power factor is greater than 0.9 (90%). These ballasts require less line current than normal power factor ballast.

High Reactance Autotransformer Ballast (HX) – HID ballast used when the input voltage does not meet the starting voltage requirement for a lamp. The ballast will transform the input voltage to the required level.

Hot Restart Time – The time it takes a HID lamp to restart and reach 90% of its light output after going from on to off to on. Typical restart times are 1 to 2 minutes for HPS and 5 to 20 minutes for Metal Halide.

IEC (International Electrotechnical Commission) – Organization made up of national committees from over 60 countries that sets international electrical and electronics standards

IEEE (Institute of Electrical and Electronics Engineers) – Organization of engineers that establishes standards for electrical and electronics industries.

Ignitor (Starter) – A device used within the ballast circuit to generate high voltage electrical pulses needed to start high pressure sodium and some metal halide lamps.

Illuminating Engineering Society (IES) – A volunteer professional membership agency dedicated to the advancement of the art and science of illumination and its dissemination.

InGaN – The preferred LED (Light Emitting Diode) semiconductor technology containing Indium, Gallium, and Nitrogen to produce green, blue and white-colored LED light sources.

Input Power – See Input Watts.

Input Voltage – Voltage, provided by a power line or power supply, to the ballast or driver.

Input Watts – Total power input to the ballast that includes lamp watts and ballast losses.

Inrush Current – Initial surge of current when an electrical device is turned on.

Instant Start Ballast – Electromagnetic or electronic lighting circuit without lamp filament heating that produces instant light.

Insulation Detector – See definition “Self Heating Thermal Protector”.

IntelliVolt – Multi-voltage feature of Philips Advance electronic ballasts that allow the ballast to operate from a nominal input voltage range of 120 – 277V at nominal frequencies of 50 or 60 Hz.

Kilohertz (kHz) – One thousand Hertz (cycles per second).

Laminations – Layers of steel, making up the ballast “core” that is surrounded by the coils in a core & coil ballast.

Lamp – The lighting industry term for light bulb. It refers to the complete assembly including the internal parts as well as the outer bulb or tube and base(s).

Lamp Current – The current delivered to the lamp by the ballast to generate light.

Lamp Current Crest Factor – See “Crest Factor.”

Lamp Watts (Rated) – The power consumed by the lamp to generate light.

Lead-Lag Slimline Ballast – Ballast that operate fluorescent lamps independently of one another. Can start lamps at 0°F.

LED Driver – See ‘Driver’.

Light – Radiant energy that can be sensed or seen by the human eye. Visible light is measured in lumens.

Light Emitting Diode (LED) – A solid-state semiconductor device that converts electrical energy directly into light. On its most basic level, the semiconductor is comprised of two regions. The p-region contains positive electrical charges while the n-region contains negative electrical charges. When voltage is applied and current begins to flow, the electrons move across the n region into the p region. The process of an electron moving through the p-n junction releases energy. The dispersion of this energy produces photons with visible wavelengths.

Line Current – See Ampere.

Low Power Factor – See ‘Normal Power Factor’.

Low Voltage Control – DC voltage used for signaling purposes.

Low Watt – Ballast with a nominal ballast factor of 0.78 or less.

Lumens – Measurement of light emitted by a lighted lamp.

Luminaire – A complete lighting fixture consisting of a lamp (or lamps), ballast(or ballasts) as required, together with the parts designed to distribute the light, position and protect the lamp, and connect them to the incoming power.

National Electric Code (NEC) – Electrical installation code developed by the National Fire Protection Association to reduce the risk of fire, which use is commonly mandated by state or local law in the U.S.

National Electrical Manufacturers Association (NEMA) – U.S. based association that sets many common standards used in electrical products.

NOM (Normas Oficial Mexicana) – Laboratory that sets safety standards for building materials, electrical appliances and other products for Mexico.

Normal Light Output - Ballast with a nominal ballast factor of 0.88 for most T8 ballasts, and 1.00 for most T5 and dimming ballasts.

Normal Power Factor - Ballast in which the power factor is less than 0.80 (80%). These ballasts require about twice the line current of high power factor ballasts.

Open Circuit Voltage [OCV] - Voltage, as measured at the lamp socket (HID or CFL) or across the lamp holders (fluorescent) when the lamp is not present, generated by the ballast needed to start a lamp when power is turned on.

Operating Position or Burn Position - The orientation of a lamp in a lighting fixture such as base up, base down, horizontal, or universal.

Packaged LED - Consists of the die, a lead frame, which houses the die, the encapsulation epoxy that protectively surrounds the die, and also disperses the light.

Parallel LED - Electrical condition where LEDs operate under the same voltage being provided by a driver.

Parallel Circuit - Ballast circuit in which the lamps connected to one ballast operate independently of one another - if one lamp fails, the rest remain lit.

PCB (Polychlorinated Biphenyls) - An organic compound that was used in ballasts manufactured prior to 1979. The ballast industry transitioned to non-PCB capacitors in or about 1979.

Potting - Compound used to completely surround and cover components of some magnetic and electronic ballasts in order to protect components, dampen sound, and dissipate heat.

Power - The amount of energy consumed or needed by a device (ballast, lamp, or ballast plus lamp) to perform its function. Power is measured in watts.

Power Factor (PF) - A measurement of how efficiently an electrical device uses power supplied by the power line. $PF = \text{Watts} / (\text{Volts} \times \text{Amps})$.

Power Factor Corrected (PFC) - Ballast with a power factor from 0.80 to 0.89.

Powerline Control - Method of dimming control where the phase of the sine wave is 'chopped' to dim the lamps.

Preheat Ballast - Electromagnetic ballast that requires a separate starter in order to ignite the lamp.

Probe Start - Method of starting mercury vapor and specific metal halide lamps in which an additional electrode at one end of the arc tube assists in lamp starting.

Programmed Start Ballast - An electronic lighting circuit similar to rapid start that provides precise heating of the lamp filaments and tightly controls the preheat duration before applying starting voltage to ignite the lamp.

Pulse Start - Method of starting high pressure sodium and specific metal halide lamps in which a high voltage starting pulse starts the lamps.

Quadri-Volt (Quad-Tap) - Feature within a ballast which gives you a choice of 4 different input voltages.

Rank - See 'Bin'.

Rapid Start Ballast - Electromagnetic or electronic ballast that provides both filament heating and starting voltage to the lamp at the same time in order to ignite the lamp.

Reference Ballast (standard reactor) - Laboratory device used to provide ANSI specified measurements of initial and mean lamp lumens.

Regulation, Lamp Wattage - The measure of the ability of a ballast or ballast circuit type to control (regulate) a lamp's operating wattage as the input voltage varies from nominal. It is the ratio of the percent change in line voltage (input voltage) divided by the resultant percent change in lamp wattage.

Reverse Current - Current flowing through a diode in the direction opposite to the direction of maximum conduction.

Reverse Voltage - Voltage across the diode for a given reverse current.

RoHS - Short for Directive on the restriction of the use of certain hazardous substances in electrical and electronic equipment, was adopted in February 2003 by the European Union.

RFI (Radio Frequency Interference) - Form of electromagnetic interference.

Series (LED) - Electrical condition where LEDs operate under the same current being provided by a driver.

Self Heating Thermal Protector - An add-on device required by various electrical codes for recessed downlight luminaires. This device is designed to shut power to the luminaire when the exterior luminaire surface reaches a defined temperature limit to prevent fire.

Series Circuit - Ballast circuit in which the lamps connected to one ballast operate as a group. If one lamp fails or is removed, then all lamps in the circuit turn off.

Series-Sequence Slimline Ballast - Ballasts that operate with lamps starting in sequence.

Series-Parallel Circuit - Ballast circuit in which the lamps connected to one ballast operate both as a group and independently. If one lamp fails or is removed in the series connected section, then all lamps in that section will turn off, but the lamps in the parallel circuit remain on.

Sine Wave - A mathematical function used to represent voltage and current.

Sound Rating - Classification given to a ballast based upon ballast noise.

Starting Temperature - The minimum ambient temperature at which the lamp will start. Light output may be affected due to lamp characteristics.

Striation - Spiraling or swirling of fluorescent lamps at initial turn on mostly with energy-saving lamps at low temperature or low current.

System Efficacy - Overall efficiency of the lamp/ballast system. $\text{System efficacy} = \text{total lamp lumens} / \text{system wattage}$.

Thermal Protector - A self-resetting switch that disconnects power to the ballast if internal temperatures rise above the trip point (typically 105°C).

Third Harmonic - Third multiple of the fundamental frequency that will add in the neutral wire of a three phase, 4 wire, Wye system and could cause over heating of the neutral wire should it exceed 33 1/3 percent.

Three-Phase, Four-Wire Wye - Most popular electrical wiring system used today for commercial building.

Total Harmonic Current (THC) - The combined effect of all of the harmonic distortion on the AC waveform produced by a ballast or other device. Excessive levels of THC can create large currents on the neutral line of a 3 phase 4 wire wye power system. See Total Harmonic Distortion.

Total Harmonic Distortion (THD) - Total Harmonic Current (THC) expressed as a percentage.

Transients - High voltage and resultant high current surges through an electrical system caused by lightning strikes to nearby transformers, overhead lines or the ground. May also be caused by switching of large motors or other electrical loads, as well as by short circuits or utility system switching. Can lead to premature failure of ballasts or other electrical devices.

Trigger Start Ballast - Electromagnetic ballast that starts and operates preheat lamps similar to a rapid start lamp. No separate starter is needed to ignite the lamp.

UL (Underwriters' Laboratories, Inc.) - A not for profit organization in the US that generates product performance and safety standards for electrical equipment, building materials, and other products. End use products such as lighting fixtures, fully encased ballasts, and home appliances are examples of products that may be listed with UL and may bear the UL logo.

UR (UL Recognized) - A part or subassembly covered under UL's Recognition Service and intended for factory installation in UL certified products. They are intended for use as components of complete equipment submitted for investigation by UL.

Voltage - A measurement of the electromotive force (electrical pressure) in an electrical circuit or device expressed in volts. Voltage can be thought of as being analogous to the pressure in a plumbing system.

Voltage Sag - Drop in voltage levels of electrical distribution system that interferes with the operation of electrical and electronic equipment. Commonly called "Brownout". Results when demand for electricity exceeds capacity of the distribution system.

Watt - The unit of measurement of electrical power.
Watts = Volts x Amps x Power Factor

Fluorescent/HID Ballast Specification for Lighting

Electronic Fluorescent

- Centium Micro Can
- Centium T5
- Centium T8, T12 and FT5
- Optanium T5
- Optanium T8
- SmartMate
- AmbiStar
- signPRO
- PowrKut
- PureVOLT
- Optanium Step-Dim
- Mark 7 0-10V
- Mark 10 Powerline
- ROVR

Magnetic HID (Including Metal Halide, High Pressure Sodium, and Low Pressure Sodium)

Electronic HID (Metal Halide)

- e-Vision and MasterColor Elite Medium Wattage
- CosmoPolis Xtreme

Ballast Specification for Electronic Fluorescent

Centium Micro Can

Section I - Physical Characteristics

- 1.1 Ballast shall be physically interchangeable with standard electromagnetic or standard electronic ballasts, where applicable.
- 1.2 Ballast shall be provided with integral leads color-coded per ANSI C82.11.

Section II - Performance Requirements

- 2.1 Ballast shall be Instant Start.
- 2.2 Ballast shall contain auto restart circuitry in order to restart lamps without resetting power.
- 2.3 Ballast shall operate from 50/60 Hz input source of 120V through 277V with sustained variations of +/- 10% (voltage and frequency).
- 2.4 Ballast shall be high frequency electronic type and operate lamps at a frequency above 42 kHz to avoid interference with infrared devices and eliminate visible flicker.
- 2.5 Ballast shall have a Power Factor greater than 0.98 for primary lamp.
- 2.6 Ballast shall have a minimum ballast factor for primary lamp application as follows: 0.75 for Low Watt, 0.85 for Normal Light Output, and 1.20 for High Light.
- 2.7 Ballast shall provide for a Lamp Current Crest Factor of 1.7 or less.
- 2.8 Ballast input current shall have Total Harmonic Distortion (THD) of less than 10% when operated at nominal line voltage with primary lamp.
- 2.9 Ballast shall have a Class A sound rating.
- 2.10 Ballast shall have a minimum starting temperature of -18C (0F) for standard T8 lamps and 16C (60F) for energy-saving T8 lamps.
- 2.11 Ballast shall provide Lamp EOL Protection Circuit.
- 2.12 Ballast shall tolerate sustained open circuit and short circuit output conditions.

Section III - Regulatory

- 3.1 Ballast shall not contain any Polychlorinated Biphenyl (PCB).
- 3.2 Ballast shall be Underwriters Laboratories (UL) listed, Class P and Type 1 Outdoor; and Canadian Standards Association (CSA) certified where applicable.
- 3.3 Ballast shall comply with ANSI C62.41 Category A for Transient protection.
- 3.4 Ballast shall comply with ANSI C82.11 where applicable.
- 3.5 Ballast shall comply with applicable requirements of the Federal Communications Commission (FCC) rules and regulations, Title 47 CFR part 18, for Non-Consumer equipment.
- 3.6 Ballast shall comply with NEMA 410 for in-rush current limits.

Section IV - Other

- 4.1 Ballast shall be manufactured in a factory certified to ISO 9001 Quality System Standards.
- 4.2 Ballast shall carry a _____ year limited warranty from date of manufacture against defects in material or workmanship for operation at a maximum case temperature of _____ (Go to our web site for up-to-date warranty information: <http://www.usa.lighting.philips.com/support/support/warranty>).
- 4.3 Manufacturer shall have a twenty-year history of producing electronic ballasts for the North American market.
- 4.4 Ballast shall be Philips Advance part # _____ or approved equal.

Ballast Specification for Electronic Fluorescent

Centium T5

Section I - Physical Characteristics

- 1.1 Ballast shall be physically interchangeable with standard electromagnetic or standard electronic ballasts, where applicable.
- 1.2 Ballast shall be provided with color-coded integral leads or connectors per ANSI C82.11.

Section II - Performance Requirements

- 2.1 Ballast shall be Programmed Start.
- 2.2 Ballast shall contain auto restart circuitry in order to restart lamps without resetting power.
- 2.3 Ballast shall operate from 50/60 Hz input source of 120V through 277V or 347V or 347V through 480V with sustained variations of +/- 10% (voltage and frequency) with no damage to the ballast.
- 2.4 Ballast shall be high frequency electronic type and operate lamps at a frequency between 42 kHz and 52kHz to avoid interference with infrared devices, eliminate visible flicker and avoid Article Surveillance Systems, such as anti-theft devices.
- 2.5 Ballast shall have a Power Factor greater than 0.98 for primary lamp.
- 2.6 Ballast shall have a minimum ballast factor of 1.0 for primary lamps.
- 2.7 Ballast shall provide for a Lamp Current Crest Factor of 1.7 or less in accordance with lamp manufacturer recommendations.
- 2.8 Ballast input current shall have Total Harmonic Distortion (THD) of less than 10% when operated at normal line voltage with full load primary lamps.
- 2.9 Ballast shall have a Class A sound rating.
- 2.10 Ballast shall have a minimum starting temperature of -18°C (0°F) or -29°C (-20°F) or 0°C (32°F) for primary lamp.
- 2.11 Ballast shall provide Lamp EOL Protection.
- 2.12 Ballast shall tolerate sustained open circuit and short circuit output conditions without damage.

Section III - Regulatory

- 3.1 Ballast shall not contain any Polychlorinated Biphenyl (PCB).
- 3.2 Ballast shall be Underwriters Laboratories (UL) listed, Class P and Type 1 Outdoor; and Canadian Standards Association (CSA) certified where applicable.
- 3.3 Ballast shall comply with ANSI C62.41 Category A for transient protection.
- 3.4 Ballast shall comply with ANSI C82.11 where applicable.
- 3.5 Ballast shall comply with the requirements of the Federal Communications Commission (FCC) rules and regulations, Title 47 CFR part 18, Non-Consumer (Class A) for EMI/RFI (conducted and radiated).
- 3.6 Ballast shall comply with UL Type CC rating.
- 3.7 Ballast shall comply with NEMA 410 for in-rush current limits.

Section IV - Other

- 4.1 Ballast shall be manufactured in a factory certified to ISO 9001 Quality System Standards.
- 4.2 Ballast shall carry a _____ year limited warranty from date of manufacture against defects in material or workmanship for operation at a maximum case temperature of _____ (Go to our web site for up-to-date warranty information: <http://www.usa.lighting.philips.com/support/support/warranty>).
- 4.3 Manufacturer shall have a twenty-year history of producing electronic ballasts for the North American market.
- 4.4 Ballast shall be Philips Advance part # _____ or approved equal.

Ballast Specification for Electronic Fluorescent

Centium T8, T12 & FT5

Section I - Physical Characteristics

- 1.1 Ballast shall be physically interchangeable with standard electromagnetic or standard electronic ballasts, where applicable.
- 1.2 Ballast shall be provided with integral leads color-coded per ANSI C82.11.

Section II - Performance Requirements

- 2.1 Ballast shall be _____ (Instant, Rapid or Programmed start).
- 2.2 Ballast shall provide Independent Lamp Operation (ILO) for Instant Start ballasts allowing remaining lamp(s) to maintain full light output when one or more lamps fail.
- 2.3 Ballast shall contain auto restart circuitry in order to restart lamps without resetting power (except for T8/HO ballasts).
- 2.4 Ballast shall operate from 50/60 Hz input source of 120V through 277V with sustained variations of +/- 10% (voltage and frequency).
- 2.5 Ballast shall be high frequency electronic type and operate lamps at a frequency above 42 kHz to avoid interference with infrared devices and eliminate visible flicker.
- 2.6 Ballast shall have a Power Factor greater than 0.98 for primary lamp.
- 2.7 Ballast shall have a minimum ballast factor for primary lamp application as follows: 0.75 for Low Watt, 0.85 for Normal Light Output, and 1.20 for High Light.
- 2.8 Ballast shall provide for a Lamp Current Crest Factor of 1.7 or less.
- 2.9 Ballast input current shall have Total Harmonic Distortion (THD) of less than 10% when operated at nominal line voltage with primary lamp.
- 2.10 Ballast shall have a Class A sound rating.
- 2.11 Ballast shall have a minimum starting temperature of _____ [-18C (0F) for standard T8 and Long Twin Tube lamps, 10C (50F) for standard T12 lamps, 0C (32F) for Slimline T8 lamps -29C (-20F) for T8/HO lamps] for primary lamp application. Ballast shall have a minimum starting temperature of 16C (60F) for energy-saving T8 and T12 lamps.
- 2.12 Ballast shall tolerate sustained open circuit and short circuit output conditions.
- 2.13 Ballast for T8 lamps shall provide lamp striation-reduction circuitry.
- 2.14 Ballast for FT5 lamps shall provide Lamp EOL Protection Circuit.

Section III - Regulatory

- 3.1 Ballast shall not contain any Polychlorinated Biphenyl (PCB).
- 3.2 Ballast shall be Underwriters Laboratories (UL) listed, Class P and Type 1 Outdoor; and Canadian Standards Association (CSA) certified where applicable.
- 3.3 Ballast shall comply with ANSI C62.41 Category A for Transient protection.
- 3.4 Ballast shall comply with ANSI C82.11 where applicable.
- 3.5 Ballast shall comply with applicable requirements of the Federal Communications Commission (FCC) rules and regulations, Title 47 CFR part 18, for Non-Consumer equipment.
- 3.6 Ballast shall comply with NEMA 410 for in-rush current limits.

Section IV - Other

- 4.1 Ballast shall be manufactured in a factory certified to ISO 9001 Quality System Standards.
- 4.2 Ballast shall carry a _____ year limited warranty from date of manufacture against defects in material or workmanship for operation at a maximum case temperature of _____ (Go to our web site for up-to-date warranty information: <http://www.usa.lighting.philips.com/support/support/warranty>).
- 4.3 Manufacturer shall have a twenty-year history of producing electronic ballasts for the North American market.
- 4.4 Ballast shall be Philips Advance part # _____ or approved equal.

Ballast Specification for Electronic Fluorescent

Optanium T5

Section I - Physical Characteristics

- 1.1 Ballast shall be physically interchangeable with standard electromagnetic or standard electronic ballasts, where applicable.
- 1.2 Ballast shall be provided with integral leads color-coded per ANSI C82.11.

Section II - Performance Requirements

- 2.1 Ballast shall be Programmed Start.
- 2.2 Ballast shall provide Independent Lamp Operation (ILO) for Programmed Start Parallel ballasts allowing remaining lamp(s) to maintain full light output when one or more lamps fail.
- 2.3 Ballast shall operate from 50/60 Hz input source of _____ (120 through 277V or 347V or 347 through 480V) with sustained variations of +/- 10% (voltage and frequency).
- 2.4 Ballast shall be high frequency electronic type and operate lamps at a frequency between 42 kHz and 52kHz to avoid interference with infrared devices, eliminate visible flicker and avoid Article Surveillance Systems, such as anti-theft devices.
- 2.5 Ballast shall have a Power Factor greater than 0.98 for primary lamp.
- 2.6 Ballast shall have a minimum ballast factor for primary lamp application as follows: 1.0 for primary T5HO lamp or 0.95 or 1.15 for primary T5HE lamp.
- 2.7 Ballast shall provide for a Lamp Current Crest Factor of 1.7 or less.
- 2.8 Ballast input current shall have Total Harmonic Distortion (THD) of less than 10% when operated at nominal line voltage with primary lamp.
- 2.9 Ballast shall have a Class A sound rating for all 4-foot lamps and smaller.
- 2.10 Ballast shall have a minimum starting temperature of -29C (-20F) or -18C (0F) or 0C (32F) for primary lamp. Consult lamp manufacturer for temperature versus light output characteristics.
- 2.11 Ballast shall tolerate sustained open circuit and short circuit output conditions.
- 2.12 Programmed Start ballast shall provide lamp EOL protection circuitry.

Section III - Regulatory

- 3.1 Ballast shall not contain any Polychlorinated Biphenyl (PCB).
- 3.2 Ballast shall be Underwriters Laboratories (UL) listed, Class P and Type 1 Outdoor; and Canadian Standards Association (CSA) certified where applicable.
- 3.3 Ballast shall comply with ANSI C62.41 Category A for Transient protection.
- 3.4 Ballast shall comply with ANSI C82.11 where applicable.
- 3.5 Ballast shall comply with applicable requirements of the Federal Communications Commission (FCC) rules and regulations, Title 47 CFR part 18, for Non-Consumer equipment.
- 3.6 Ballast shall meet NEMA/CEE High Performance T8 Lighting System Specifications.
- 3.7 Ballast shall comply with UL Type CC rating.
- 3.8 Ballast shall comply with NEMA 410 for in-rush current limits.

Section IV - Other

- 4.1 Ballast shall be manufactured in a factory certified to ISO 9001 Quality System Standards.
- 4.2 Ballast shall carry a _____ year limited warranty from date of manufacture against defects in material or workmanship for operation at a maximum case temperature of _____ (Go to our web site for up-to-date warranty information: <http://www.usa.lighting.philips.com/support/support/warranty>).
- 4.3 Manufacturer shall have a twenty-year history of producing electronic ballasts for the North American market.
- 4.4 Ballast shall be Philips Advance part # _____ or approved equal.

Ballast Specification for Electronic Fluorescent

Optanium T8

Section I - Physical Characteristics

- 1.1 Ballast shall be physically interchangeable with standard electromagnetic or standard electronic ballasts, where applicable.
- 1.2 Ballast shall be provided with integral leads color-coded per ANSI C82.11.

Section II - Performance Requirements

- 2.1 Ballast shall be _____ (Instant or Programmed) Start.
- 2.2 Ballast shall provide Independent Lamp Operation (ILO) for Instant Start and Programmed Start Parallel ballasts allowing remaining lamp(s) to maintain full light output when one or more lamps fail.
- 2.3 Ballast shall operate from 50/60 Hz input source of _____ (120 through 277V or 347V or 347 through 480V) with sustained variations of +/- 10% (voltage and frequency).
- 2.4 Ballast shall be high frequency electronic type and operate lamps at a frequency between 42 kHz and 52kHz to avoid interference with infrared devices, eliminate visible flicker and avoid Article Surveillance Systems, such as anti-theft devices.
- 2.5 Ballast shall have a Power Factor greater than 0.98 for primary lamp.
- 2.6 Ballast shall have a minimum ballast factor for primary lamp application as follows: 0.77 for Low Watt, 0.87 for Normal Light Output, and 1.18 for High Light for Instant Start ballasts or 0.71 for Low Watt and 0.88 for Normal Light Output and 1.18 for High Light for Programmed Start ballasts.
- 2.7 Ballast shall provide for a Lamp Current Crest Factor of 1.7 or less.
- 2.8 Ballast input current shall have Total Harmonic Distortion (THD) of less than 10% when operated at nominal line voltage with primary lamp.
- 2.9 Ballast shall have a Class A sound rating for all 4-foot lamps and smaller.
- 2.10 Ballast shall have a minimum starting temperature of -29C (-20F) on Instant Start ballasts or -18C (0F) on Programmed Start ballasts for standard T8 lamps and 16C (60F) for energy-saving T8 lamps. Consult lamp manufacturer for temperature versus light output characteristics.
- 2.11 Ballast shall tolerate sustained open circuit and short circuit output conditions.

- 2.12 Ballast shall have lamp striation-reduction circuitry.
- 2.13 Programmed Start ballast shall provide lamp EOL protection circuitry.

Section III - Regulatory

- 3.1 Ballast shall not contain any Polychlorinated Biphenyl (PCB).
- 3.2 Ballast shall be Underwriters Laboratories (UL) listed, Class P and Type 1 Outdoor; and Canadian Standards Association (CSA) certified where applicable.
- 3.3 Ballast shall comply with ANSI C62.41 Category A for Transient protection.
- 3.4 Ballast shall comply with ANSI C82.11 where applicable.
- 3.5 Ballast shall comply with applicable requirements of the Federal Communications Commission (FCC) rules and regulations, Title 47 CFR part 18, for Non-Consumer equipment.
- 3.6 Ballast shall meet NEMA/CEE High Performance T8 Lighting System Specifications.
- 3.7 IOP ballasts shall comply with UL Type CC rating.
- 3.8 Ballast shall comply with NEMA 410 for in-rush current limits.

Section IV - Other

- 4.1 Ballast shall be manufactured in a factory certified to ISO 9001 Quality System Standards.
- 4.2 Ballast shall carry a _____ year limited warranty from date of manufacture against defects in material or workmanship for operation at a maximum case temperature of _____ (Go to our web site for up-to-date warranty information: <http://www.usa.lighting.philips.com/support/support/warranty>).
- 4.3 Manufacturer shall have a twenty-year history of producing electronic ballasts for the North American market.
- 4.4 Ballast shall be Philips Advance part # _____ or approved equal.

Ballast Specification for Electronic Fluorescent

SmartMate

Section I - Physical Characteristics

- 1.1 Ballast shall be physically interchangeable with standard electromagnetic or standard electronic ballasts, where applicable.
- 1.2 Ballast shall be available in a plastic/metal can or all metal can construction to meet plenum requirements.
- 1.3 Ballast shall be provided with poke-in wire trap connectors color-coded per ANSI C82.11.

Section II - Performance Requirements

- 2.1 Ballast shall be Programmed Start except for ballasts with -QS suffix, which shall be Rapid Start.
- 2.2 Ballast shall contain auto restart circuitry in order to restart lamps without resetting power.
- 2.3 Ballast shall operate from 50/60 Hz input source of 120V through 277V with sustained variations of +/- 10% (voltage and frequency).
- 2.4 Ballast shall be high frequency electronic type and operate lamps at a frequency above 42 kHz to avoid interference with infrared devices and eliminate visible flicker.
- 2.5 Ballast shall have a Power Factor greater than 0.98 for primary lamp.
- 2.6 Ballast shall have a minimum ballast factor of 1.00 for primary lamp.
- 2.7 Ballast shall provide for a Lamp Current Crest Factor of 1.7 or less.
- 2.8 Ballast input current shall have Total Harmonic Distortion (THD) of less than 10% when operated at nominal line voltage with primary lamp.
- 2.9 Ballast shall have a Class A sound rating.
- 2.10 Ballast shall have a minimum starting temperature of -18C (0F) for primary lamp.
- 2.11 Ballast shall provide Lamp EOL Protection Circuit.
- 2.12 Ballast shall tolerate sustained open circuit and shortcircuit output conditions.

Section III - Regulatory

- 3.1 Ballast shall not contain any Polychlorinated Biphenyl (PCB).
- 3.2 Ballast shall be Underwriters Laboratories (UL) listed, Class P and Type 1 Outdoor; and Canadian Standards Association (CSA) certified where applicable.
- 3.3 Ballast shall be rated for use in air-handling spaces.
- 3.4 Ballast shall comply with ANSI C62.41 Category A for transient protection.
- 3.5 Ballast shall comply with ANSI C82.11 where applicable.
- 3.6 Ballast shall comply with applicable requirements of the Federal Communications Commission (FCC) rules and regulations, Title 47 CFR part 18, for Non-Consumer equipment.
- 3.7 Ballast shall comply with NEMA 410 for in-rush current limits.

Section IV - Other

- 4.1 Ballast shall be manufactured in a factory certified to ISO 9001 Quality System Standards.
- 4.2 Ballast shall carry a _____ year limited warranty from date of manufacture against defects in material or workmanship for operation at a maximum case temperature of _____ (Go to our web site for up-to-date warranty information: <http://www.usa.lighting.philips.com/support/support/warranty>).
- 4.3 Manufacturer shall have a twenty-year history of producing electronic ballasts for the North American market.
- 4.4 Ballast shall be Philips Advance part # _____ or approved equal.

Ballast Specification for Electronic Fluorescent

AmbiStar

Section I - Physical Characteristics

- 1.1 Ballast shall be physically interchangeable with standard electromagnetic or standard electronic ballasts, where applicable.
- 1.2 Ballast shall be provided with integral leads or poke-in wire trap connectors color-coded per ANSI C82.11.

Section II - Performance Requirements

- 2.1 Ballast shall be _____ (Instant or Rapid) Start.
- 2.2 Ballast shall provide Independent Lamp Operation (ILO) for Instant Start ballasts allowing remaining lamp(s) to maintain full light output when one or more lamps fail.
- 2.3 Ballast shall contain auto restart circuitry in order to restart lamps without resetting power
- 2.4 Ballast shall operate from 60 Hz input source of 120V with sustained variations of +/- 10% (voltage and frequency).
- 2.5 Ballast shall be high frequency electronic type and operate lamps at a frequency above 42 kHz to avoid interference with infrared devices and eliminate visible flicker.
- 2.6 Ballast shall have a Power Factor for primary lamp as follows: greater than 0.98 for RCF and RELB models or greater than 0.50 for REB models.
- 2.7 Ballast shall have a minimum ballast factor of 0.85 for primary lamp.
- 2.8 Ballast shall provide for a Lamp Current Crest Factor of 1.7 or less.
- 2.9 Ballast input current shall have Total Harmonic Distortion (THD) when operated at nominal line voltage with primary lamp as follows: less than 10% for RCF models, less than 20% for RELB models or less than 150% for REB models.
- 2.10 Ballast shall have a Class A sound rating.
- 2.11 Ballast shall have a minimum starting temperature for primary lamp as follows: 0°F/-18°C for RCF, REB models or 50°F/10°C for standard T12 lamps and 60°F/16°C for energy-saving T12 lamps.
- 2.12 Ballast shall provide Lamp EOL Protection Circuit for CFL.
- 2.13 Ballast shall tolerate sustained open circuit and short circuit output conditions.

Section III - Regulatory

- 3.1 Ballast shall not contain any Polychlorinated Biphenyl (PCB).
- 3.2 Ballast shall be Underwriters Laboratories (UL) listed, Class P and Type 1 Outdoor; and Canadian Standards Association (CSA) certified where applicable.
- 3.3 Ballast for CFL lamps shall be rated for use in air-handling spaces.
- 3.4 Ballast shall comply with ANSI C62.41 Category A for Transient protection.
- 3.5 Ballast shall comply with ANSI C82.11 where applicable.
- 3.6 Ballast shall comply with applicable requirements of the Federal Communications Commission (FCC) rules and regulations, Title 47 CFR part 18, for Non-Consumer equipment.
- 3.7 Ballast shall comply with NEMA 410 for in-rush current limits.

Section IV - Other

- 4.1 Ballast shall be manufactured in a factory certified to ISO 9001 Quality System Standards.
- 4.2 Ballast shall carry a _____ year limited warranty from date of manufacture against defects in material or workmanship for operation at a maximum case temperature of _____ (Go to our web site for up-to-date warranty information: <http://www.usa.lighting.philips.com/support/support/warranty>).
- 4.3 Manufacturer shall have a twenty-year history of producing electronic ballasts for the North American market.
- 4.4 Ballast shall be Philips Advance part # _____ or approved equal.

Ballast Specification for Electronic Fluorescent

signPRO

Section I - Physical Characteristics

- 1.1 Ballast shall be physically interchangeable with standard electromagnetic or standard electronic ballasts, where applicable.
- 1.2 Ballast shall be provided with integral leads color-coded per ANSI C82.11.

Section II - Performance Requirements

- 2.1 Ballast shall be Instant Start.
- 2.2 Ballast shall provide Independent Lamp Operation (ILO) for Instant Start ballasts allowing remaining lamp(s) to maintain full light output when one or more lamps fail.
- 2.3 Ballast shall contain auto restart circuitry in order to restart lamps without resetting power..
- 2.4 Ballast shall operate from 50/60 Hz input source of 120V through 277V with sustained variations of +/- 10% (voltage and frequency).
- 2.5 Ballast shall be high frequency electronic type and operate lamps at a frequency above 42 kHz to avoid interference with infrared devices and eliminate visible flicker.
- 2.6 Ballast shall have a Power Factor greater than 0.98 for primary lamp.
- 2.7 Ballast shall have a minimum ballast factor for primary lamp application as follows: 0.60 for T12/HO and 0.80 for T8/HO.
- 2.8 Ballast shall provide for a Lamp Current Crest Factor of 1.7 or less.
- 2.9 Ballast input current shall have Total Harmonic Distortion (THD) of less than 10% when operated at nominal line voltage with primary lamp.
- 2.10 Ballast shall have a Class A sound rating.
- 2.11 Ballast shall have a minimum starting temperature of -29C (-20F) for primary lamp.
- 2.12 Ballast shall tolerate sustained open circuit and short circuit output conditions.

Section III - Regulatory

- 3.1 Ballast shall not contain any Polychlorinated Biphenyl (PCB).
- 3.2 Ballast shall be Underwriters Laboratories (UL) listed, Class P and Type 2 Outdoor; and Canadian Standards Association (CSA) certified where applicable.
- 3.3 Ballast shall comply with ANSI C62.41 Category A for Transient protection.
- 3.4 Ballast shall comply with ANSI C82.11 where applicable.
- 3.5 Ballast shall comply with applicable requirements of the Federal Communications Commission (FCC) rules and regulations, Title 47 CFR part 18, for Non-Consumer equipment.
- 3.6 Ballast shall comply with NEMA 410 for in-rush current limits.

Section IV - Other

- 4.1 Ballast shall be manufactured in a factory certified to ISO 9001 Quality System Standards.
- 4.2 Ballast shall carry a _____ year limited warranty from date of manufacture against defects in material or workmanship for operation at a maximum case temperature of _____ (Go to our web site for up-to-date warranty information: <http://www.usa.lighting.philips.com/support/support/warranty>).
- 4.3 Manufacturer shall have a twenty-year history of producing electronic ballasts for the North American market.
- 4.4 Ballast shall be Philips Advance part # _____ or approved equal.

Ballast Specification for Electronic Fluorescent

PowrKut

Section I - Physical Characteristics

- 1.1 Ballast shall be physically interchangeable with standard electromagnetic or standard electronic ballasts, where applicable.
- 1.2 Ballast shall be provided with integral leads color-coded per ANSI C82.11.

Section II - Performance Requirements

- 2.1 Ballast shall be Rapid Start.
- 2.2 Ballast shall contain auto restart circuitry in order to restart lamps without resetting power.
- 2.3 Ballast shall operate from 60 Hz input source of 120V or 277V as applicable with sustained variations of +/- 10% (voltage and frequency).
- 2.4 Ballast shall operate lamps at a frequency of 60 Hz.
- 2.5 Ballast shall have a Power Factor greater than 0.90 for primary lamp.
- 2.6 Ballast shall have a minimum ballast factor of 0.85 for primary lamp
- 2.7 Ballast shall provide for a Lamp Current Crest Factor of 1.7 or less.
- 2.8 Ballast input current shall have Total Harmonic Distortion (THD) of less than 20% when operated at nominal line voltage with primary lamp.
- 2.9 Ballast shall have a Class A sound rating.
- 2.10 Ballast shall have a minimum starting temperature of 10C (50F) for primary lamp.
- 2.11 Ballast shall tolerate sustained open circuit and shortcircuit output conditions.

Section III - Regulatory

- 3.1 Ballast shall not contain any Polychlorinated Biphenyl (PCB).
- 3.2 Ballast shall be Underwriters Laboratories (UL) listed, Class P and Type 1 Outdoor; and Canadian Standards Association (CSA) certified where applicable.
- 3.3 Ballast shall comply with ANSI C62.41 Category A for transient protection.
- 3.4 Ballast shall comply with ANSI C82.11 where applicable.
- 3.5 Ballast shall comply with applicable requirements of the Federal Communications Commission (FCC) rules and regulations, Title 47 CFR part 18, for Non-Consumer equipment

Section IV - Other

- 4.1 Ballast shall be manufactured in a factory certified to ISO 9001 Quality System Standards.
- 4.2 Ballast shall carry a _____ year limited warranty from date of manufacture against defects in material or workmanship for operation at a maximum case temperature of _____ (Go to our web site for up-to-date warranty information: <http://www.usa.lighting.philips.com/support/support/warranty>).
- 4.3 Manufacturer shall have a twenty-year history of producing electronic ballasts for the North American market.
- 4.4 Ballast shall be Philips Advance part # _____ or approved equal.

Ballast Specification for Electronic Fluorescent

PureVOLT

Section I - Physical Characteristics

- 1.1 Ballast shall be physically interchangeable with standard electromagnetic or standard electronic ballasts, where applicable.
- 1.2 Ballast shall be provided with integral leads color-coded per ANSI C82.11.

Section II - Performance Requirements

- 2.1 Ballast shall be Programmed Start.
- 2.2 Ballast shall contain auto restart circuitry in order to restart lamps without resetting power.
- 2.3 Ballast shall operate from 50/60 Hz input source of 120V through 277V with sustained variations of +/- 10% (voltage and frequency).
- 2.4 Ballast shall be high frequency electronic type and operate lamps at a frequency above 42 kHz to avoid interference with infrared devices and eliminate visible flicker.
- 2.5 Ballast shall have a Power Factor greater than 0.96 for primary lamp.
- 2.6 Ballast shall provide for a Lamp Current Crest Factor of 1.7 or less.
- 2.7 Ballast input current shall have Total Harmonic Distortion (THD) of less than 10% when operated at nominal line voltage with primary lamp.
- 2.8 Ballast shall have a Class A sound rating.
- 2.9 Ballast shall have a minimum starting temperature of -18C (0F) for primary lamp.
- 2.10 Ballast shall provide Lamp EOL Protection Circuit.
- 2.11 Ballast shall tolerate sustained open circuit and shortcircuit output conditions.

Section III - Regulatory

- 3.1 Ballast shall not contain any Polychlorinated Biphenyl (PCB).
- 3.2 Ballast shall be Underwriters Laboratories (UL) listed, Class P and Type 1 Outdoor; and Canadian Standards Association (CSA) certified where applicable.
- 3.3 Ballast shall be rated for use in air-handling spaces.
- 3.4 Ballast shall comply with ANSI C62.41 Category A for Transient protection.
- 3.5 Ballast shall comply with ANSI C82.11 where applicable.
- 3.6 Ballast shall comply with applicable requirements of the Federal Communications Commission (FCC) rules and regulations, Title 47 CFR part 18, for Non-Consumer equipment.
- 3.7 Ballast shall comply with NEMA 410 for in-rush current limits.

Section IV - Other

- 4.1 Ballast shall be manufactured in a factory certified to ISO 9001 Quality System Standards.
- 4.2 Ballast shall carry a _____ year limited warranty from date of manufacture against defects in material or workmanship for operation at a maximum case temperature of _____ (Go to our web site for up-to-date warranty information: <http://www.usa.lighting.philips.com/support/support/warranty>).
- 4.3 Manufacturer shall have a twenty-year history of producing electronic ballasts for the North American market.
- 4.4 Ballast shall be Philips Advance part # _____ or approved equal.

Ballast Specification for Controllable Light Output Electronic Fluorescent

Optanium Step-Dim

Section I - Physical Characteristics

- 1.1 Ballast shall be physically interchangeable with standard electromagnetic or standard electronic ballasts, where applicable.
- 1.2 Ballast shall be provided with integral leads color-coded per ANSI C82.11.

Section II - Performance Requirements

- 2.1 The ballast shall be Programmed Start.
- 2.2 The ballast shall contain auto restart circuitry in order to restart lamps without resetting power.
- 2.3 Ballast shall operate from 50/60 Hz input source of 120V through 277V with sustained variations of +/- 10% (voltage and frequency).
- 2.4 Ballast shall be high frequency electronic type and operate lamps at a frequency above 42 kHz to avoid interference with infrared devices and eliminate visible flicker.
- 2.5 Ballast shall have a Power Factor greater than 0.98 at 100% power and greater than 0.90 at 50% power for primary lamp.
- 2.6 Ballast shall have a ballast factor for primary lamp as follows: 0.87 for T8 lamp or 0.95 or 1.15 for T5HE lamp or 1.0 for T5HO lamp.
- 2.7 Ballast shall provide for a Lamp Current Crest Factor of 1.7 or less.
- 2.8 Ballast input current shall have Total Harmonic Distortion (THD) of less than 10% when operated at nominal line and 100% power.
- 2.9 Ballast shall have a Class A sound rating.
- 2.10 Ballast shall have a minimum starting temperature of -18C (0F) for standard T8 and T5HE lamps or 16C (60F) for energy-saving T8 lamps or 0C (32F) for standard T5HO lamps or 10C (50F) for energy-saving T5HO lamps.
- 2.11 Ballast shall tolerate sustained open circuit and short circuit output conditions.
- 2.12 Ballast shall provide Lamp EOL Protection Circuit for T5 lamps.
- 2.13 Ballast shall control light output in two steps: 100% power and 50% power. Control shall be any device that switches the line voltage input. Both line voltage inputs must be on the same phase.
- 2.14 Ballast shall ignite the lamps at any light output setting without first going to another output setting.

Section III - Regulatory

- 3.1 Ballast shall not contain any Polychlorinated Biphenyl (PCB).
- 3.2 Ballast shall be Underwriters Laboratories (UL) listed, Class P and Type 1 Outdoor; and Canadian Standards Association (CSA) certified where applicable.
- 3.3 Ballast shall comply with ANSI C62.41 Category A for Transient protection.
- 3.4 Ballast shall comply with ANSI C82.11 where applicable.
- 3.5 Ballast shall comply with applicable requirements of the Federal Communications Commission (FCC) rules and regulations, Title 47 CFR part 18, for Non-Consumer equipment.
- 3.6 Ballast shall comply with UL Type CC rating.
- 3.7 Ballast shall comply with NEMA 410 for in-rush current limits

Section IV - Other

- 4.1 Ballast shall be manufactured in a factory certified to ISO 9001 Quality System Standards.
- 4.2 Ballast shall carry a _____ year limited warranty from date of manufacture against defects in material or workmanship for operation at a maximum case temperature of _____ (Go to our web site for up-to-date warranty information: <http://www.usa.lighting.philips.com/support/support/warranty>).
- 4.3 Manufacturer shall have a twenty-year history of producing electronic ballasts for the North American market.
- 4.4 Ballast shall be Philips Advance part # _____ or approved equal.

Ballast Specification for Controllable Light Output Electronic Fluorescent

Mark 7 O-10V

Section I - Physical Characteristics

- 1.1 Ballast shall be physically interchangeable with standard electromagnetic or standard electronic ballasts, where applicable.
- 1.2 Ballast shall be available in a plastic/metal can or all metal can construction to meet all plenum requirements.
- 1.3 Ballast shall be provided with poke-in wire trap connectors or integral leads color coded per ANSI C82.11.

Section II - Performance Requirements

- 2.1 Ballast shall be Programmed Start.
- 2.2 Ballast shall provide Independent Lamp Operation (ILO) for Programmed Start Parallel ballasts allowing remaining lamp(s) to maintain full light output when one or more lamps fail.
- 2.3 Ballast shall be provided with integral protection circuitry to withstand connection of low voltage control leads to mains power supply. In this event, ballast shall default to maximum light output.
- 2.4 Ballast shall contain auto restart circuitry in order to restart lamps without resetting power.
- 2.5 Ballast shall operate from 50/60 Hz input source of 120V or 277V or 347V with sustained variations of +/- 10% (voltage and frequency). IntelliVolt models shall operate from 50/60 Hz input source of 120V through 277V with sustained variations of +/- 10% (voltage and frequency).
- 2.6 Ballast shall be high frequency electronic type and operate lamps at a frequency above 42 kHz to avoid interference with infrared devices and eliminate visible flicker.
- 2.7 Ballast shall have a Power Factor greater than 0.98 at full light output and greater than 0.90 throughout the dimming range for primary lamp.
- 2.8 Ballast shall have a minimum ballast factor of 1.00 (120V and 277V 1-3 lamp models) or 0.88 (120V and 277V 4 lamp models and 347V 2-3 lamp models) or 1.18 (277V 4 lamp HL models) at maximum light output and 0.03 at minimum light output for primary lamp.
- 2.9 Ballast shall provide for a Lamp Current Crest Factor of 1.7 or less.
- 2.10 Ballast input current shall have Total Harmonic Distortion (THD) of less than 10% when operated at nominal line voltage and 100% power.

- 2.11 Ballast shall have a Class A sound rating.
- 2.12 Ballast shall have a minimum starting temperature of 10°C (50°F) for primary lamp.
- 2.13 Ballast shall provide Lamp EOL Protection Circuit for all T5, T5/ HO and CFL lamps.
- 2.14 Ballast shall control lamp light output from 100% - 3% relative light output for series operation T8 and CFL lamps, 100% - 10% relative light output for parallel operation T8 and 100% - 1% relative light output for T5/HO lamps.
- 2.15 Ballast shall ignite the lamps at any light output setting without first going to another output setting.
- 2.16 Ballast shall tolerate sustained open circuit and short circuit output conditions.

Section III - Regulatory

- 3.1 Ballast shall not contain any Polychlorinated Biphenyl (PCB).
- 3.2 Ballast shall be Underwriters Laboratories (UL) listed, Class P and Type 1 Outdoor; and Canadian Standards Association (CSA) certified where applicable.
- 3.3 Ballast shall comply with ANSI C62.41 Category A for Transient protection.
- 3.4 Ballast shall comply with ANSI C82.11 where applicable.
- 3.5 Ballast shall comply with the requirements of the Federal Communications Commission (FCC) rules and regulations, Title 47 CFR part 18, Non-Consumer (Class A) for EMI/RFI (conducted and radiated).
- 3.6 Ballast shall comply with NEMA 410 for in-rush current limits.

Section IV - Other

- 4.1 Ballast shall be manufactured in a factory certified to ISO 9001 Quality System Standards.
- 4.2 Ballast shall carry a _____ year limited warranty from date of manufacture against defects in material or workmanship for operation at a maximum case temperature of _____ (Go to our web site for up-to-date warranty information: <http://www.usa.lighting.philips.com/support/support/warranty>).
- 4.3 Manufacturer shall have a twenty-year history of producing electronic ballasts for the North American market.
- 4.4 Ballast shall be Philips Advance part # _____ or approved equal.

Ballast Specification for Controllable Light Output Electronic Fluorescent

Mark 10 Powerline

Section I - Physical Characteristics

- 1.1 Ballast shall be physically interchangeable with standard electromagnetic or standard electronic ballasts, where applicable.
- 1.2 Ballast shall be available in a plastic/metal can or all metal can construction to meet all plenum requirements.
- 1.3 Ballast shall be provided with poke-in wire trap connectors or integral leads color coded per ANSI C82.11.

Section II - Performance Requirements

- 2.1 Ballast shall be Programmed Start.
- 2.2 Ballast shall contain auto restart circuitry in order to restart lamps without resetting power.
- 2.3 Ballast shall operate from 60 Hz input source of 120V or 277V as applicable with sustained variations of +/- 10% (voltage and frequency).
- 2.4 Ballast shall be high frequency electronic type and operate lamps at a frequency above 42 kHz to avoid interference with infrared devices and eliminate visible flicker.
- 2.5 Ballast shall have a Power Factor greater than 0.98 at full light output and greater than 0.90 throughout the dimming range for primary lamp.
- 2.6 Ballast shall have a minimum ballast factor of 1.00 at maximum light output and 0.05 at minimum light output for primary lamp application.
- 2.7 Ballast shall provide for a Lamp Current Crest Factor of 1.7 or less.
- 2.8 Ballast input current shall have Total Harmonic Distortion (THD) of less than 10% at maximum light output when operated at nominal line voltage with primary lamp. Total Harmonic Current (THC) at minimum light output shall not exceed THC at maximum light output.
- 2.9 Ballast shall have a Class A sound rating.
- 2.10 Ballast shall have a minimum starting temperature of 10° C (50° F) for primary lamp.
- 2.11 Ballast shall provide Lamp EOL Protection Circuit for all T5, T5/ HO, and CFL lamps.
- 2.12 Ballast shall control lamp light output from 100% - 5% relative light output for T8 and CFL lamps and 100% - 1% relative light output for T5/HO lamps.

- 2.13 Ballast shall ignite the lamps at any light output setting without first going to another output setting.
- 2.14 Ballast shall tolerate sustained open circuit and short circuit output conditions.

Section III - Regulatory

- 3.1 Ballast shall not contain any Polychlorinated Biphenyl (PCB).
- 3.2 Ballast shall be Underwriters Laboratories (UL) listed, Class P and Type 1 Outdoor; and Canadian Standards Association (CSA) certified where applicable.
- 3.3 Ballast shall comply with ANSI C62.41 Category A for Transient protection.
- 3.4 Ballast shall comply with ANSI C82.11 where applicable.
- 3.5 Ballast shall comply with the requirements of the Federal Communications Commission (FCC) rules and regulations, Title 47 CFR part 18, Non-Consumer (Class A) for EMI/RFI (conducted and radiated).
- 3.6 Ballast shall comply with NEMA 410 for in-rush current limits.

Section IV - Other

- 4.1 Ballast shall be manufactured in a factory certified to ISO 9001 Quality System Standards.
- 4.2 Ballast shall carry a _____ year limited warranty from date of manufacture against defects in material or workmanship for operation at a maximum case temperature of _____ (Go to our web site for up-to-date warranty information: <http://www.usa.lighting.philips.com/support/support/warranty>).
- 4.3 Manufacturer shall have a twenty-year history of producing electronic ballasts for the North American market.
- 4.4 Ballast shall be Philips Advance part # _____ or approved equal.

Ballast Specification for Controllable Light Output Electronic Fluorescent

ROVR

Section I - Physical Characteristics

- 1.1 Ballast shall be physically interchangeable with standard electromagnetic or standard electronic ballasts, where applicable.
- 1.2 Ballast shall be available in a plastic/metal can or all metal can construction to meet all plenum requirements.
- 1.3 Ballast shall be provided with poke-in wire trap connectors or integral leads color coded per ANSI C82.11.

Section II - Performance Requirements

- 2.1 Ballast shall be Programmed Start.
- 2.2 Ballast shall be provided with integral protection circuitry to withstand connection of low voltage control leads to mains power supply. In this event, ballast shall default to maximum light output.
- 2.3 Ballast shall contain auto restart circuitry in order to restart lamps without resetting power.
- 2.4 Ballast shall operate from 50/60Hz input source of 120V or 277V with sustained variations of +/-10% (voltage and frequency) with no damage to the ballast. IntelliVolt models shall operate from 50/60Hz input source of 120V through 277V with sustained variations of +/-10% (voltage and frequency) with no damage to the ballast.
- 2.5 Ballast shall be high frequency electronic type and operate lamps at a frequency above 42kHz to avoid interference with infrared devices and eliminate visible flicker.
- 2.6 Ballast shall have a Power Factor greater than 0.98 at full light output and greater than 0.90 throughout the dimming range for primary lamp.
- 2.7 Ballast shall have a minimum ballast factor of 1.00 at maximum light output and 0.03 at minimum light output for primary lamp.
- 2.8 Ballast shall provide for a Lamp Current Crest Factor of 1.7 or less throughout the dimming range in accordance with lamp manufacturer recommendations.
- 2.9 Ballast input current shall have Total Harmonic Distortion (THD) of less than 10% when operated at nominal line voltage with primary lamp.
- 2.10 Ballast shall have a Class A sound rating.
- 2.11 Ballast shall have a minimum starting temperature of 10°C (50° F) for primary lamp.
- 2.12 Ballast shall provide Lamp EOL Protection Circuit for all T5, T5/HO, and CFL lamps.

- 2.13 Ballast shall control lamp light output from 100% - 3% relative light output for T8 and CFL lamps and 100% - 1% relative light output for T5/HO lamps.
- 2.14 Ballast shall ignite the lamps at any light output setting without first going to another output setting.
- 2.15 Ballast shall tolerate sustained open circuit and short circuit output conditions without damage.

Section III - Regulatory

- 3.1 Ballast shall not contain any Polychlorinated Biphenyl (PCB).
- 3.2 Ballast shall be Underwriters Laboratories (UL) listed, Class P and Type 1 Outdoor; and Canadian Standards Association (CSA) certified where applicable.
- 3.3 Ballast shall comply with ANSI C62.41 Category A for Transient protection.
- 3.4 Ballast shall comply with ANSI C82.11 where applicable.
- 3.5 Ballast shall comply with the requirements of the Federal Communications Commission (FCC) rules and regulations, Title 47 CFR part 18, Non-Consumer (Class A) for EMI/RFI (conducted and radiated).
- 3.6 Ballast shall comply with NEMA 410 for in-rush current limits.

Section IV - Other

- 4.1 Ballast shall be manufactured in a factory certified to ISO 9001 Quality System Standards.
- 4.2 Ballast shall carry a _____ year limited warranty from date of manufacture against defects in material or workmanship for operation at a maximum case temperature of _____ (Go to our web site for up-to-date warranty information: <http://www.usa.lighting.philips.com/support/support/warranty>).
- 4.3 Manufacturer shall have a twenty-year history of producing electronic ballasts for the North American market.
- 4.4 Ballast shall be controlled by a Class 1 or Class 2 low voltage DALI controller.
- 4.5 Ballast shall be Philips Advance part # _____ or approved equal.

Magnetic HID

Ballast Specification for Magnetic HID Ballasts

Metal Halide, High Pressure Sodium & Low Pressure Sodium

Performance Requirements:

1. Ballasts shall be designed in accordance with all applicable ANSI specifications including ANSI C82.4.
2. The Core & Coil ballast shall be designed with class "H" (180°C) or higher insulation system and vacuum-pressure impregnated with a silica-filled polyester resin.
3. All coils shall be precision wound.
4. Core & Coil ballasts shall be designed to operate for 60,000 hours of continuous operation at their maximum rated temperature.
5. Core & Coil ballasts and starter combinations shall be designed to provide a reliable lamp starting down to -40°C for High Pressure Sodium and -30°C for Metal Halide at nominal line voltage of plus or minus 10%.
6. All HID ballast shall have a nominal ballast factor of 1.0
7. All HID ballasts shall contain no exposed live parts.

Other

1. Ballast shall be manufactured in an ISO 9001 and ISO 14001 Certified Facility.
2. Ballast shall carry a 2-year limited warranty from date of manufacture against defects in material or workmanship. (Go to our website for up-to-date warranty information: <http://www.usa.lighting.philips.com/support/support/warranty>).
3. Manufacturer shall have been manufacturing HID ballasts for at least twenty-five years.
4. All HID ballasts shall be UL component recognized.
5. All HID ballasts shall be CSA certified.
6. Ballast must be a Philips Advance branded ballast (or approved equal).

Capacitors for HID

1. All capacitors will be provided with a self-contained internal bleeder resistor where required according to UL1029.
2. Oil-filled capacitors will be housed in aluminum or corrosion resistant steel cans and contain .25" quick disconnect terminals.
3. Oil filled capacitors shall have a 90°C max case temperature rating.
4. Dry film capacitors shall have a 105°C max. case

temperature rating.

5. All dry film capacitors provided by the ballast manufacturer have been tested and approved for use with the manufacturer's ballast.
6. All capacitors rated 400V or less shall be dry film type.
7. All dry film capacitors shall have no exposed live parts.

Ignitors for HID

1. All ignitors will be polyester resin-filled with either a plastic or aluminum external housing.
2. The ignitor shall be so designed to provide six months of lamp open circuit operation without failure.
3. All ignitors shall have a case rating temperature of 105°C.
4. All ignitors shall be designed to withstand 10,000 hours of continuous pulsing.
5. All ignitors shall have no exposed live parts.

HID Retrofit Kits

1. All HID kits shall be precision wound to insure proper insulation.
2. All HID kits shall be pre-wired with ignitors.
3. HID core and coil shall be interchangeable with prior ballast or include mounting bracket to adapt ballast to intended fixture.
4. All HID kits shall be supplied with pre-insulated input voltage leads.
5. All HID kits are to be UL and CSA recognized following the guidelines found in UL 1029 and CAN/CSA-22.2 No. 74-92 (part 2 and 3).
6. The core & coil shall be designed with class "H" (180°C) or higher insulation system and vacuum-pressure impregnated with a silica-filled polyester resin.
7. All capacitors rated 400V or less shall be dry film type rated 105°C.
8. There are to be no exposed live parts on the core & coil, ignitor, or dry capacitor.
9. Must meet applicable ANSI Specifications for the specified lamp.
10. Kit must include installation instructions and a 1-800# for field assistance.
11. Ballast must be Philips Advance Part # _____ (or approved equal).

Electronic HID (Metal Halide)

Ballast Specification for Electronic Metal Halide

e-Vision Electronic Ballasts

Section I - Physical Characteristics

- 1.1 The electronic ballast shall be furnished with integral, color-coded leads.
- 1.2 The electronic ballast shall be furnished with a metallic enclosure for maximum thermal dissipation.

Section II - Performance

- 2.1 The electronic ballast shall be IntelliVolt[®] and operate from a nominal line voltage range of 120-277 volts, +/-10%, 50/60 Hz unless stated otherwise.
- 2.2 The electronic ballast input current shall have Total Harmonic Distortion (THD) of less than 15%.
- 2.3 The electronic ballast shall have a Power Factor greater than 90%.
- 2.4 The electronic ballast shall have a lamp end-of-life detection and shutdown circuit. Power to ballast shall be disconnected to reset end-of-life detection circuit.
- 2.5 The electronic ballast shall be Sound Rated A.
- 2.6 The electronic ballast output frequency to the lamps shall be less than 200 Hz to prevent acoustic resonance inside the lamp arc tube and to minimize visible flicker.
- 2.7 The electronic ballast shall provide a "Lamp Current Crest Factor" of less than 1.5.
- 2.8 The electronic ballast shall be thermally protected to shut off when operating temperatures reach unacceptable levels.

Section III - Regulatory

- 3.1 The electronic ballast shall meet the requirements of the Federal Communications Commission rules and regulations, Title 47 CFR part 18, for Non-Consumer equipment.
- 3.2 The electronic ballast shall be Underwriters Laboratories (UL) Listed and CSA Certified where applicable.
- 3.3 Ballast shall comply with ANSI C62.41 Category A for transient protection.

Section IV - Other

- 4.1 The electronic ballast shall not contain Polychlorinated Biphenyl (PCB's).
- 4.2 Ballast shall carry a 3-year limited warranty from date of manufacture against defects in material or workmanship when operated at marked case temperature (Go to our website for up-to-date warranty information: <http://www.usa.lighting.philips.com/support/support/warranty>).
- 4.3 The manufacturer shall have a twenty-five year history of producing HID lamp ballasts for the North American market.
- 4.4 The electronic ballast shall be produced in a factory certified to ISO 9001 Quality System Standards
- 4.5 The electronic ballast shall comply with RoHS.

Section V - Additional Specifications for MasterColor Elite Medium Wattage (IZTMH210315RLF and HZTMH210315RLF)

- 5.1 Ballast must automatically reduce lamp power to lower its operating temperature when its internal operating temperature increases beyond its maximum limit.
- 5.2 Ballast must be approved by Philips to operate MasterColor CDM Elite Medium Wattage Lamps.
- 5.3 Ballast must include a 0-10V dimming interface and control the dimming function such that the CDM Elite MW lamp is allowed to warm up for 10 minutes at full power before the lamp is allowed to dim, regardless of the level of the 0-10V dimming signal.
- 5.4 Ballast shall dim the lamp from 100% to 50% power in 30 seconds and shall be able to restore power to 100% in 3 seconds maximum.

Electronic HID (Metal Halide)

Ballast Specification for Electronic Metal Halide

CosmoPolis Xtreme Electronic Ballasts

Applicable to all Ballast Catalog Numbers beginning with ICW, IDCW, RCW

Section I - Physical Characteristics

- 1.1 The electronic ballast shall be made of a polymeric housing and double insulated with a double isolated functional ground to protect metal parts of the luminaire from becoming live in any normal operating or fault mode.
- 1.2 The electronic ballast shall incorporate integral wiring connectors with push button wire entrapment.

Section II - Performance

- 2.1 The electronic ballast shall have a minimum starting temperature of -30°C (-22°F) and maximum case temperature of 90°C (194°F)
- 2.2 The electronic ballast shall have integral common mode surge protection of 10kV/5kA (combination wave) and differential mode surge protection of 2kV (IEEE 62.41.2)
- 2.3 The electronic ballast shall be suitable for use up to $+55^{\circ}\text{C}$ ambient conditions.
- 2.4 The electronic ballast shall operate from a nominal line voltage range of either 208-277V or 120V as applicable, 50/60Hz, $\pm 10\%$.
- 2.5 The electronic ballast shall have a Total harmonic Distortion (THD) of 15% or less.
- 2.6 The electronic ballast shall have an input power factor of 90% or greater.
- 2.7 The electronic ballast shall have a lamp end-of-life detection and shutdown circuit. Power to ballast shall be disconnected to reset the shutdown circuit.
- 2.8 The electronic ballast shall be sound rated A.
- 2.9 The electronic ballast steady state output frequency to the lamps shall be less than 200Hz to prevent acoustic resonance in the lamps resulting in premature failure.
- 2.10 The electronic ballast shall be thermally protected to shut down the ballast and lamp if temperatures reach unacceptable levels.
- 2.11 The electronic ballast must have a rated average life of 80,000 hours or operation.

Section III - Regulatory

- 3.1 The electronic ballast shall be UL Recognized and CSA Recognized.
- 3.2 The electronic ballast shall be approved by Philips to operate Philips CosmoPolis lamps.
- 3.3 The electronic ballast shall be RoHS compliant.

Section IV - Other

- 4.1 The electronic ballast shall be provided with a 5-year limited warranty from date of manufacture against defects in material or workmanship when operated within its maximum rated case temperature. (refer to our website for updated warranty information, <http://www.usa.lighting.philips.com/support/support/warranty>)
- 4.2 The electronic ballast manufacturer must have a twenty five year history of producing HID lamp ballasts for the North American market.
- 4.3 The electronic ballast shall not contain any Polychlorinated Biphenyls (PCBs).
- 4.4 The electronic ballast shall be produced in a factory certified to ISO 9001 Quality System Standards.

* Availability limited to existing stocks.

** The CWA ballasts offered as replacements are furnished with a capacitor which must be used in the ballast circuit as shown in the wiring diagram in this Atlas. The original ballast circuit in the lighting fixture may have been low or normal power factor, and therefore, no capacitor was used. If the CWA ballast with its capacitor does not fit in the fixture, contact Philips for assistance.

Philips Advance replacement ballasts shown are functionally equivalent to listed obsolete ballasts. Dimensional differences can exist.

Suffix "T" ballast catalog numbers indicate ballast is equipped with 120V output tap. Standard practice is to use 120V tap on quadri-volt ballast, where quadri-volt ballasts are available.

Where no replacement ballast is shown, ballast has been discontinued and inventories are exhausted. Consult nearest Philips sales office for assistance.

* Availability limited to existing stocks.

** The CWA ballasts offered as replacements are furnished with a capacitor which must be used in the ballast circuit as shown in the wiring diagram in this Atlas. The original ballast circuit in the lighting fixture may have been low or normal power factor, and therefore, no capacitor was used. If the CWA ballast with its capacitor does not fit in the fixture, contact Philips for assistance.

Philips Advance replacement ballasts shown are functionally equivalent to listed obsolete ballasts.

Dimensional differences can exist.

Suffix "T" ballast catalog numbers indicate ballast is equipped with 120V output tap. Standard practice is to use 120V tap on quadri-volt ballast, where quadri-volt ballasts are available.

Where no replacement ballast is shown, ballast has been discontinued and inventories are exhausted.

Consult nearest Philips sales office for assistance.

* Availability limited to existing stocks.

** The CWA ballasts offered as replacements are furnished with a capacitor which must be used in the ballast circuit as shown in the wiring diagram in this Atlas. The original ballast circuit in the lighting fixture may have been low or normal power factor, and therefore, no capacitor was used. If the CWA ballast with its capacitor does not fit in the fixture, contact Philips for assistance.

Philips Advance replacement ballasts shown are functionally equivalent to listed obsolete ballasts. Dimensional differences can exist.

Suffix "T" ballast catalog numbers indicate ballast is equipped with 120V output tap. Standard practice is to use 120V tap on quadri-volt ballast, where quadri-volt ballasts are available.

Where no replacement ballast is shown, ballast has been discontinued and inventories are exhausted.

Consult nearest Philips sales office for assistance.
