

For Immediate Release

Siemon Introduces TERA[®] Category 8.2 Copper Cabling System

November 16, 2018. Sydney, Australia — Siemon, a leading global network infrastructure specialist, today announced the launch of its end-to-end TERA Category 8.2 copper cabling system, delivering transmission performance up to 2 GHz to support emerging high-speed 25 and 40 Gigabit (25/40GBASE-T) applications in data centre switch-to-server applications.

Siemon's TERA Category 8.2 System includes cable, patch cords, connectors and pre-terminated cable assemblies. The system is founded on Siemon's TERA connector that was originally chosen as the ISO/IEC 11801 interface for category 7_A/Class F_A and that also now meets Category 8.2 compliance. Combining the TERA connector with category 8.2 S/FTP 2000 MHz cable and patch cords delivers a complete end-to-end system that exceeds ISO/IEC category 8.2/Class II specifications for 2-connector, 30-meter Class II channels in the data centre.

"Siemon's fully shielded TERA connector has long been the highest-performing copper connector available, so it was no surprise that it easily achieved Category 8.2 compliance with plenty of margin, and we are now excited to introduce our complete end-to-end TERA Category 8.2 system," said Mike Boisseau, Siemon's business unit leader for copper systems. "Not only is the TERA connector far more robust than other twisted-pair copper connectors, but the Category 8.2 system provides enhanced insertion loss and crosstalk performance over RJ45-based Category 8 systems while offering the reach to support a broad range of switch-to-server architectures, preserving copper's place in the data centre for years to come."

Siemon's end-to-end TERA Category 8.2 system can be easily certified using new TERA adapters recently released by Fluke Networks for their Versiv DSX-8000 CableAnalyzer, which demonstrates high levels of accuracy when compared to laboratory measurements. "We are pleased to support TERA Category 8.2 testing with the release of our new TERA adapter," said Harley Lang, RCDD, Fluke Networks' Director of Worldwide Marketing. "This is the latest example of the Versiv Cabling Certification System's continuing evolution to meet the needs of the cabling industry."

Siemon's TERA-to-RJ45 patch cords are ideal for 2-connector switch-to-server connections in middle-of-row (MoR) and end-of-row (EoR) configurations, while available Category 8-compatible RJ45-to-RJ45 patch cords enable direct attach switch-to-server connections in top-of-rack (ToR) configurations. The TERA outlet and plug are backwards compatible with Category 7A/Class FA cabling systems

which allows for both flexibility and future-proof performance, making TERA ideal for data centres, healthcare imaging and financial applications.

About Siemon

Established in 1903, Siemon is an industry leader specializing in the design and manufacture of high quality, high performance IT infrastructure solutions and services for Data Centers, LANs and Intelligent Buildings.

Headquartered in Connecticut, USA, with global sales, technical and logistics expertise spanning 100 countries, Siemon offers the most comprehensive suites of copper and optical fiber cabling systems, cabinets, racks, cable management, data center power and cooling systems and Intelligent Infrastructure Management solutions. With more than 400 patents specific to structured cabling, Siemon Labs invests heavily in R&D and the development of Industry Standards, underlining the company's long-standing commitment to its customers and the industry. Through an ongoing commitment to waste and energy reduction, Siemon's environmental sustainability benchmarks are unparalleled in the industry, including 179% global carbon negativity and zero-landfill status.

Siemon Interconnect Solutions (SIS) is a Siemon business unit comprised of a team of dedicated technical sales professionals supported by Siemon Labs, mechanical, electrical and signal integrity engineers committed to solving industry and customer driven interconnect challenges. We provide custom network infrastructure solutions to: OEM's, Leading Manufacturers, Value-Added Resellers and System Integrators.
