HARDWARE

Readers

Our range of high quality access control readers and keypads deliver maximum choice to meet all project requirements. With a range of technologies, including biometrics and multi-use secure MIFARE systems may be chosen to exactly match the key design, operational, performance and budgetary objectives.

Benefits

- Stylish, elegant case design fits with any surrounding without looking out of place.
- Can mounted both indoors and out.
- Integral LEDs and sounder gives clear audible and visual indication of card reads and access status.
- Read range of up to 150mm (proximity) facilitating smooth entry.
- With MIFARE, use one card for all of your applications including cashless vending, library, POS and car park.

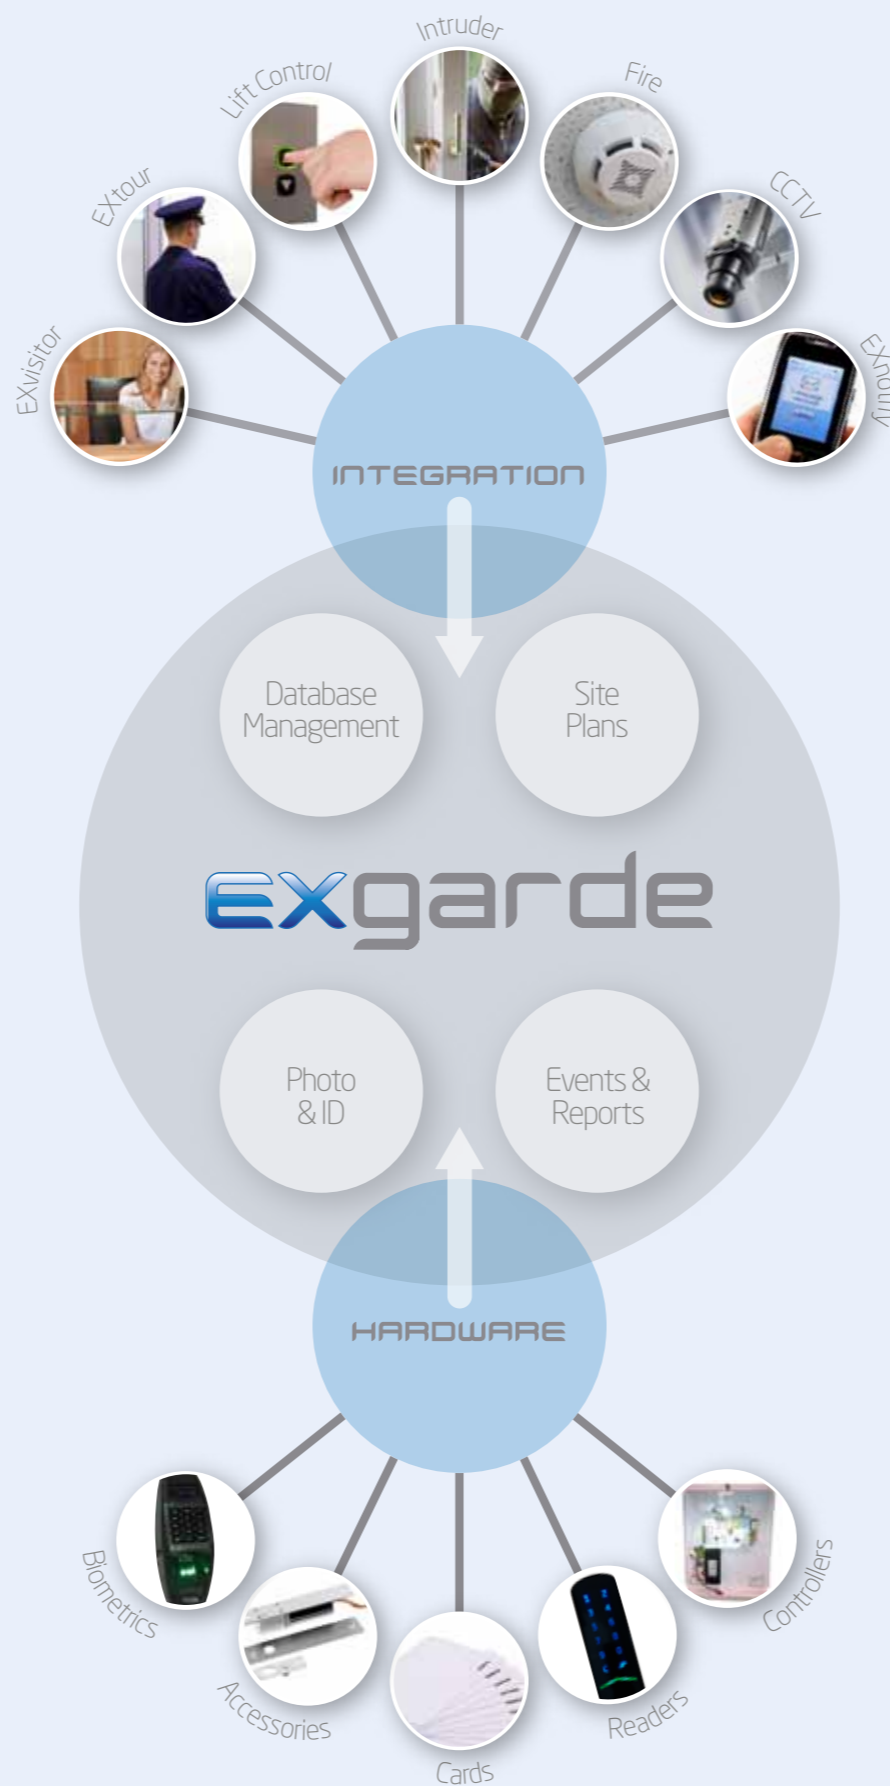

Controllers

A fully featured networkable access control unit, the Expert range boasts a high specification. With a high card capacity, this range is suitable for those applications that need to control large numbers of people through access points. Expert is the ideal platform for those who demand the most from an access control system. Typical applications include, hospitals, utilities, large scale transportation and industrial.

Benefits

- Up to 48,000 card capacity.
- Up to 4 doors per controller.
- Numerous expansion options.
- Enable lift access and validate floors.
- Flexible communication option.
- Keep your system operational during power or communications disruption without losing events using distributed intelligence.
- Connect directly to your network via TCP/IP - saving time and cabling costs.
- Operates with either TDSi or 3rd party readers.
- Spare inputs and outputs to maximise investment and allow flexible configuration.

SOFTWARE

EXgarde® PRO is a fully featured Access Management PC software application that combines the latest in TDSi innovation in a single package with a user friendly interface. It can be used to control 1 door at 1 site with a few users to thousands of doors at multiple sites with thousands of users.

EXgarde® PRO can be used to seamlessly integrate the many aspects of a security and building management system using a single database and a single user interface. All EXgarde® application modules can be set up, administered and managed from a single or multiple workstations.

Ease of integration and ease of expansion are key attributes of EXgarde® PRO providing numerous possibilities to integrate to the latest CCTV, Fire, Intrusion, Building Automation and Management, Active Directory and Biometric technologies.

More than Access Control...

TDSi is committed to delivering high quality integrated solutions in partnership with best of breed manufacturers across the security industry. That's why we carefully select our integration partners in order to provide our customers with a holistic system incorporating complimentary technologies that seamlessly integrate via EXgarde, TDSi's own software platform.

The Open Platform Company

CCTV Integration

TDSi offers integration with our own Vugarde VMS platform as well as Milestone's Xprotect Enterprise and Corporate video management software. From a single IP-enabled access portal, security operators are able to use EXgarde Explorer to directly monitor CCTV feeds via the VMS, tagging events and using Video Verification whilst also controlling the physical access control of automated doors.

Texecom Intruder

Continuing TDSi's view of making integration seamless, integration of Intruder Alarm Panels is now capable using true TCP/IP integration between the alarm panel and EXgarde to provide a comprehensive view of the alarm system and zone states from within the EXgarde Management Software.

Wireless Locking

EXgarde's integration with Assa Abloy's Aperio or SimonVoss SmartIntego wireless locks offers a new level of remote lock functionality with a global leader in door opening solutions. Using wireless locking alongside TDSi's core systems allows greater flexibility in remote areas where access control may be more difficult to implement. Working together, the two solutions offer highly precise site activity reporting, centralised alarm management, real-time events, and evacuation reporting, giving a highly accurate view of the overall access situation of any facility.

What other systems can you integrate your access control with?
