

Professional AV Solutions for a Control Room

Expertise To Support Your Control Room Needs

Control rooms in both public and private organisations act as operational nerve centers, designed to monitor, control and document information, and protect against network or security threats, 24/7. They provide real-time, actionable intelligence to enable data-driven decision-making via a wide range of operational technologies, including physical security and audio-visual solutions. In this demanding environment, operators can face challenges handling vast amounts of data, monitoring a multitude of screens and using systems that become quickly outdated.

That is why it's important to continually assess digital signage, video walls, desktop monitors, signal management and control consoles to allow for maximum employee productivity and uninterrupted access to the data being monitored. Wesco Anixter's professional AV experts can provide comprehensive solutions and capabilities to help design your optimal control room and keep it running smoothly.
