

Network Infrastructure Solutions for Retail

Expertise to Support Your Network Infrastructure Needs

In providing goods and services to consumers, retail locations often depend on their corporate offices to provide the network infrastructure and support to run their business. This can lead to challenges specific to the retail industry such as poor application performance, data and information inconsistency across disparate systems, unreliable communications and lack of technical resources.

Wesco Anixter's network infrastructure experts can help design and deliver comprehensive and resilient infrastructure solutions that take into consideration connectivity, power and thermal management, and network security, so that your retail operations run efficiently and profitably, whatever the location or geography.

Technology and Support Services Team (TSS)

Our TSS team is a global technology support organisation that partners with retail customers to offer technical insight and expert advice to define innovative solutions and services that meet current and future business needs. TSS can help you gain knowledge to keep pace with emerging technologies, drive interoperability, supplement in-house engineer resources and fill technology gaps with resources across the globe.

Comprehensive Solutions

- Cable management and pathways
- Racks, cabinets and enclosures
- Cabling
- Power and thermal management
- Connectivity
- Tools and test equipment
- Networking

Services

- Advisory services
- Project deployment
- Installation enhancement
- Supply chain services
- Integrated supply
