

PATCH CORD LABELLING

Anixter's labelling solutions save you time on material handling and preparation so you can focus on network setup.

Anixter's basic labelling services include:

- **Patch cord labelling** – one standard label on each end of cord (12 characters or less)
- **Fibre jumper labelling with sleeve** – one standard label on each end (12 characters or less); the sleeve increases the cable's outer diameter, allowing a legible label to be affixed
- **Fibre jumper labelling without sleeve** – one standard label on each end (12 characters or less)
- **Fibre trunk labelling** – one standard label on each end (12 characters or less)
- **Fibre trunk box labelling** – one standard label on the box containing the trunk
- **Reel flange labelling** – one standard non-laminated paper label attached to the flange of the cable reel

Benefits:

- Eliminates on-site labour
- Saves time removing cords and labels from original manufacturer's packaging
- Reduces waste and disposal costs by eliminating original packaging
