

## PATCH CORD LABELING

Anixter's labeling solutions save you time on material handling and preparation so you can focus on network setup.

Anixter's basic labeling services include:

- **Patch cord labeling** – one standard label on each end of cord (12 characters or less)
- **Fiber jumper labeling with sleeve** – one standard label on each end (12 characters or less); the sleeve increases the cable's outer diameter, allowing a legible label to be affixed
- **Fiber jumper labeling without sleeve** – one standard label on each end (12 characters or less)
- **Fiber trunk labeling** – one standard label on each end (12 characters or less)
- **Fiber trunk box labeling** – one standard label on the box containing the trunk
- **Reel flange labeling** – one standard non-laminated paper label attached to the flange of the cable reel

### Benefits:

- Eliminates onsite labor for labeling and confirming the appropriate labeling scheme
- Saves time removing cords and labels from original manufacturer's packaging
- Reduces waste and disposal costs by eliminating original packaging
