

ADAPT

As the workplace evolves to meet new regulations and guidelines, how are you adapting to project demands?

We understand that keeping your team healthy is critical. We also know that new safety guidelines, limited labour and distancing protocols can slow you down, disrupt timelines and increase costs.

In addition to helping you reduce costs, save time, improve productivity and mitigate risk, we're here to assist in navigating these new challenges and help you:

- Meet new onsite safety protocols
- Overcome labour constraints
- Understand and deploy new technologies

LABELLING

Let Anixter help you sort, identify or account for your shipment on site or in the warehouse with custom labels that use colour codes, bar codes and other customisations as needed.

KITTING

Kits reduce the number of products you receive, unpack and transport, while also reducing unproductive labour by eliminating time spent searching for and collecting various materials.

IP ADDRESSING AND DOA TESTING

Anixter can check for dead-on-arrival (DOA) products, update firmware and configure IP addresses prior to shipping, reducing the need for technicians to do these on site.

INSTA-REEL

By becoming a payout stand when chocked in place and eliminating the need for jack stands, INSTA-REEL reduces the labour needed for cable pulls.

CABINET ASSEMBLY

Cabinets can be delivered preassembled and ready to install to save significant time at the jobsite and reduce unproductive labour receiving, unwrapping and assembling.

WHOLE ORDER DELIVERY

All of your products can be delivered together as one package to limit onsite receiving, handling and transporting.

For more services that can help you adapt to the evolving jobsite conditions, visit anixter.com/emea/contractorsolutions.
