

WHOLE ORDER DELIVERY

Anixter's whole order delivery service prepares a single, organised shipment of the multiple products needed for each phase of installation. Receiving a single complete shipment per site:

- Eliminates lost or late material and trips to will call
- Minimises disruption and environmental impact of site deliveries
- Reduces labour effort to find material with colour-coded shrink wrap, labels and pallet packing list per pallet
- Expedites the item confirmation process during receiving with the help of dedicated, per-pallet packing lists
- Streamlines the receiving and payables processes, since a single complete shipment = a single receiving process = a single invoice
- Minimises freight costs by reducing the number of shipments per PO
- Makes it easier to keep products organised on site
- Improves safety by reducing risks associated with material handling

Contact your local Anixter representative to implement whole order delivery at your jobsite, or visit anixter.com/contractorsolutions/emea to learn more about Anixter's contractor services.

Applications

- Jobsites with multiple trades
- Jobsites with limited storage
- Jobsites with limited delivery access
