Protect What Matters Most.

with Honeywell Silent Knight® Low Frequency Devices

Low frequency (520 Hz) alarms have been proven to be more effective at waking individuals, including young children, in the event of a fire. For this reason, low frequency devices are now required in many commercial sleeping spaces across the country according to the latest NFPA 72 standards.

Silent Knight's line of low frequency sounders, sounder strobes, and sounder bases meet these new code requirements and integrate seamlessly with your existing Silent Knight fire alarm system – helping us all rest a little easier.
