

A photograph of a modern building's interior, showing multiple levels with glass railings and a large glass skylight in the center, allowing natural light to illuminate the space.

CONNECTED LIGHTING SOLUTIONS AND SERVICES

Connected lighting refers to a system of light fixtures that have sensors and are connected to a network, allowing them to send and receive data. Connected lighting systems generally fall into two categories: Power-over-Ethernet (PoE) and network controlled. A PoE or network controlled LED lighting system can deliver energy savings of up to 80 percent and unprecedented insight and control over commercial, industrial and public spaces. Anixter's connected lighting solutions are sourced from trusted manufacturers who are innovating new ways to expand product performance and intelligence. Drawing from Anixter's deep-rooted IP background, we bring network and lighting specialists to the table to work with you on the best solution for your new build or retrofit—then leverage our global presence and deployment expertise to complete it on time, under budget.

Power-over-Ethernet Lighting

Power-over-Ethernet (PoE) lighting's power, control and environmental intelligence ride a highway of Category cable familiar to the data com specialist, eliminating costly installs and dual cabling systems. Embedded sensors capture occupancy, activity and environmental data to enable efficient use of space and power plus real-time adaptation for comfort, safety and sustainability. New sensor technology can easily be added to the system in future.

Network Controlled Lighting

Network controlled lighting is one of the easiest, most cost-effective ways to reduce energy bills and gain actionable, data-driven insight. Retrofit existing fixtures with sensors and wired or wireless controls to enable occupancy tracking, temperature and humidity measurements and daylight harvesting.

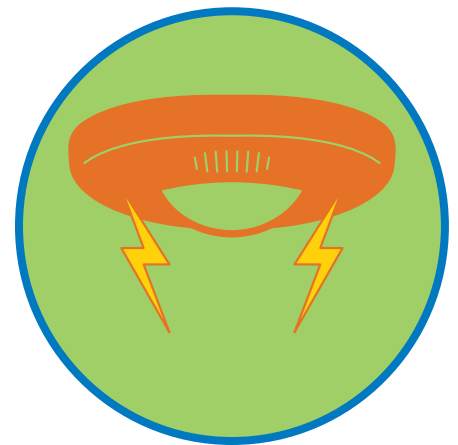

Products

- PoE lighting fixtures
- PoE sensors and switches
- Lighting sensors
 - Occupancy
 - Vacancy
 - Daylight harvesting
- Wired and wireless lighting controls
 - Indoor (commercial and industrial)
 - Outdoor

Services

- Lighting audits
- Project financing and tax considerations
- Utility rebates analysis
- Inventory and kitting of lighting materials
- Turn-key solutions
- Design-build capabilities
- Renovation and retrofits
- Reclamation and recycling
- Warranty extensions

Reducing costs, saving time, improving productivity and mitigating risks are our goals for every customer and project.

CONTACT US for a quote on your next lighting deployment.
