

CORD BUNDLING

Copper patch cord bundling offers fast and efficient installation at the jobsite. With the manufacturer's packaging removed and cords bundled with hook and loop ties to prevent "bird nests" and tangling, the patch cords can be plugged in within minutes. Further enhance your productivity with pre-labeled cords that allow you to focus on configuration and testing.

Anixter's process includes:

- Removing OEM packaging and twist ties
- Labeling cords
- Consolidating and sorting cords
- Bundling cords
- Delivering to jobsite

Benefits:

- Reduces part numbers ordered and simplifies receiving
- Improves jobsite organization
- Eliminates time to remove individual packaging and enables faster deployment
- Reduces nonproductive labor
- Reduces risk of cord tangling and damage
